Introduction	Recalls	A top-down model	Operations	Results	Conclusion and perspectives

◆□▶ ◆□▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ● ● ● ●

Framework

Application

- FoGrImMi project
- Very large medical images (30GB)
- Image processing and segmentation

Requirements

- Image representation
- Segmentation and manipulation of regions
- Focus of attention over interesting areas

Definition of a data structure

- Topological: process regions
- Hierarchical: multi-resolution images
- Top-down: limit memory requirements

Introduction	Recalls	A top-down model	Operations	Results	Conclusion and perspectives
Timeline	9				

Model		Drawbacks
Quadtrees	\Rightarrow	Segmentation
Regular pyramids		problems
Irregular	\Rightarrow	Only bottom-up
pyramids		constructions

 \Rightarrow Definition of a top-down and topological framework for irregular pyramids

Combinatorial maps

Notions

- Dart: ~ half-edge
- β_1 permutation: turns around a face
- β₂ involution: gives the other orientation of the edge

Topological maps

Requirements

- Represent any partition
- Describe adjacency and inclusion relationships
- Efficient processing algorithms

Combination of models

Minimal combinatorial map (topology representation)

- Interpixel matrix (geometry information)
- Tree of regions (inclusion relationships)

Model features

- Complete (topology and geometry)
- Minimal (number of cells)
- Unique (same partition \Leftrightarrow same map)

Simple graph pyramids

- Stack of successively reduced graphs
- Difficult to update after operations

Combinatorial pyramids

- Stack of successively contracted combinatorial maps
- Only bottom-up models
- Whole initial partition encoded

Top-down pyramids

- Only encode upper levels
- Focus of attention: adjust segmentation from first discernable features

Introduction	Recalls	A top-down model	Operations	Results	Conclusion and perspectives

Goals and definitions

Goals

- Top-down topological model
- No explicit encoding
- Causal structure
- Easy update of the model after splitting

Definitions

- Pyramid \sim stack of linked topological maps
- A level k is deduced from k 1, applying splitting operations

The hierarchical data structure

Up/Down relations:

Global construction process

Main steps

• Create first map G⁰

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Results

Properties

Preserves causality

Recalls

- each element of G^k has at least one descendant in G^{k+1}
- each element of G^k has at most one antecedent in G^{k-1}

Encode any partition

- unrestricted merging within the region burst results
- any connected set of pixels may be group into a region
- splitting does not depend on an initial geometrical pattern

Statistics

	G^1	G^2	G^3
Number of darts	600	7 728	19 090
Memory occupation (KB)	306	808	1 604
Total level construction time (s)	3.11	2.05	1.94

Table: Top-down construction applied to the Lena image (512*512)

Introduction	Recalls	A top-down model	Operations	Results	Conclusion and perspectives

- Topological maps extended to a top-down hierarchical model
- Applicable implementation with basic criteria
 - compare average gray level
 - refine following the homogeneity of the mother region

- Core operations defined for:
 - level segmentation
 - topology modification

- Improve segmentation aspect
 - develop optimized criteria
- Improve splitting algorithm
 - avoid burst method (one region/pixel)
- Change geometry encoding
 - replace the actual explicit encoding
- Define a tiled structure for each level
 - manage memory by swapping tiles on disk
