

Advanced Industrial Archaeology

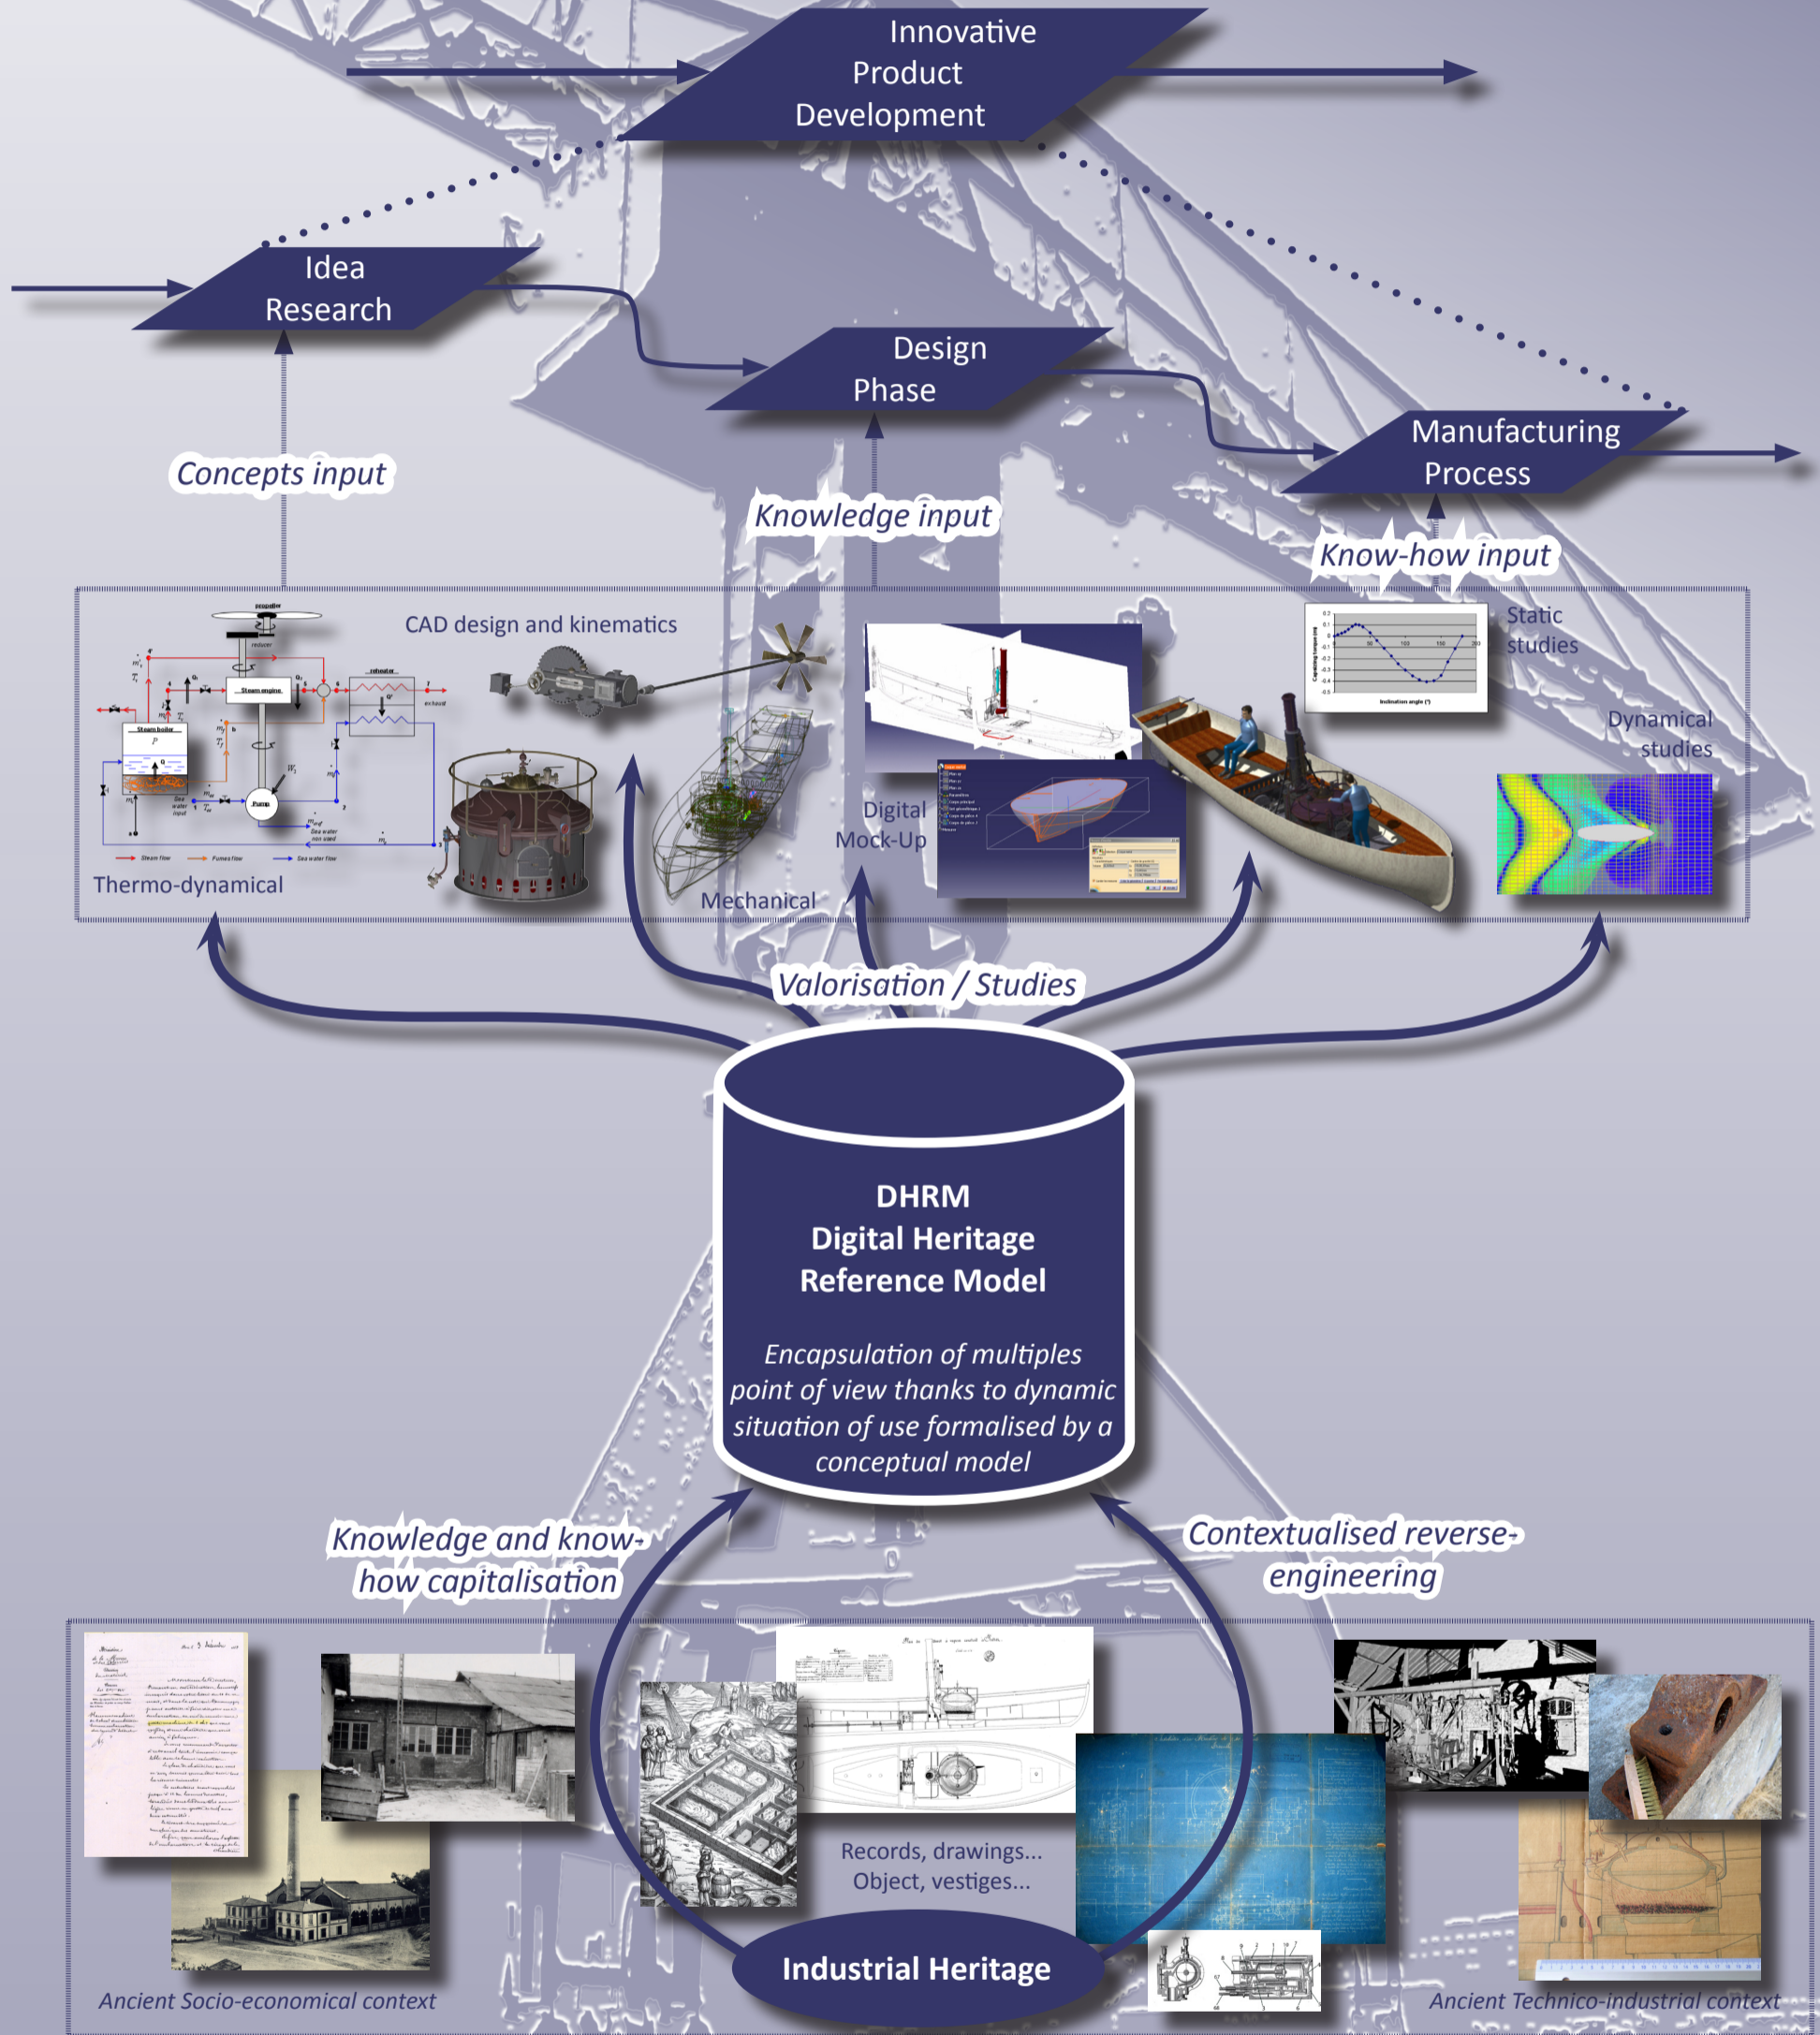

A new way for creating innovative product and process

EARTH TIME

FUTURE

PRESENT

PAST

"During the past century, an extraordinary scientific explosion had produced a large amount of data, ideas, and principles bigger than all the previous millenniums together have achieved... It is obvious that science and more precisely scientific cooperations have to play a role in the prodigious task for capitalizing this knowledge into an intelligible and precise model, significant for the human evolution."

Sir Julian Huxley (translation from French), UNESCO

ACKNOWLEDGMENTS

- Students and teachers from Engineering School: Ecole Centrale & Ecole Polytechnique, University of Nantes, France ; and Mechanical school IUT, Nantes, France
- Researchers from Centre François Viète, University of Nantes, France
- Team members of Indret Historical Service from DCNS Propulsion, Indret, France
