The vibrational transition dipole moment of the  $\nu_5-\nu_4$  FIR band determined to be  $|\mu_{5\leftarrow 4}| = 0.55$  D is incorrect. Indeed, it was found that the wavenumber  $\tilde{\nu}$  of the lines was overlooked in its determination from the measured line intensities. The correct value is  $|\mu_{5\leftarrow 4}| = 0.051$  D. It is comparable to that measured for  $\text{C}_2\text{D}_2$ , i.e. 0.0358 (20) D [1].
