

**Figure S1, supplementary data. Analysis of CWPs by SDS-PAGE after separation by ConA chromatography**

A. One step of ConA chromatography

B. Two successive steps of ConA chromatography

M (kDa) Molecular mass markers; CWPs: cell wall proteins; FT: flow-through; W(1,2,3): successive washes; ECa(1,2,3): fractions eluted from the first ConA column; ECb(1,2): fractions eluted from the second ConA column. Numbering refers to the stained bands analyzed by MALDI-TOF MS (*cf* Table S1, supplementary data)
