## RE-INVENTING THE LIMITED LIABILITY COMPANY

**Manuscript Type** Perspective

**Research issue/Question:** The evolution of corporate governance thinking and its implications for theory building. The 19th century concept of the corporation still underpins corporate governance practice today: if the company was re-invented to meet contemporary circumstances, what might it look like today?

**Research Insights/Findings:** The original corporate concept was superbly simple and brilliantly successful. Subsequently, the growing diversity of corporate objectives, confused ownership structures, and complex corporate groups, has led to abuse. Society has lost the control which it originally demanded for the right to incorporate companies in which shareholders' had no liability for corporate debts beyond their equity stake. Faced with government bail-outs of failing companies, allegedly excessive executive remuneration, and a growing concern for corporate social responsibility and sustainability, the time has come to rethink the rationale, the purpose and the governance of the joint-stock, limited-liability company.

**Theoretical/Academic implications:** This paper has been written in response to the editor's initiative to seek contributions that might provide alternative theoretical insights into corporate governance issues. By taking an historical, evolutionary perspective, this paper looks at corporate governance through a different lens than those of agency theory, stewardship theory or the growing philosophical interest in corporate social responsibility.

The primary theoretical call is for a taxonomy of corporate entities that differentiates them according to the way that power is exercised over them. The paper highlights three unresolved paradoxes in corporate governance orthodoxy: governance by

1  
2  
3 principles or rules, independent directors' ignorance of the business, and the unitary  
4  
5 board's dual responsibility for both performance and conformance.  
6  
7

8 **Practitioner/Policy implications:** The paper offers an alternative paradigm for the  
9  
10 governance of corporate entities introducing the concepts of the Governing Body, the  
11  
12 Executive Management and Stakeholder Liaison Groups. It is also suggested that  
13  
14 external auditors should report to regulators not directors. The underlying argument is  
15  
16 that limited liability is a privilege granted by society not a right: what society grants,  
17  
18 society can take away if it is not satisfied with the way companies are managed or  
19  
20 governed.

## RE-INVENTING THE LIMITED LIABILITY COMPANY

### INTRODUCTION

The invention of the limited liability company in the mid-nineteenth century led to the formation of vast amounts of capital, the generation of countless jobs, and the creation of incredible worldwide wealth over the years. However, the creators of the original idea recognized that limiting the liability of shareholders for companies' debts was a significant concession by society. So companies' powers were strictly restricted. The objectives of each company had to be precise, bounded, and clearly stated. Company promoters, directors, officers and shareholders had to be declared, and public annual reports and returns were required. The directors' accounts were audited by shareholders' audit committees.

But today, the original concept has become debased. International groups of companies operate through vast pyramids of subsidiary and associated companies, some enjoying the secrecy of haven jurisdictions. Others operate through complex networks of cross-holdings and joint ventures. Some use chains of public companies to leverage the financial advantage of those at the head of the chain. Companies' memoranda of association now provide multiple objectives; indeed some jurisdictions do not require declared objectives at all. The reporting of public, listed companies has become vastly complicated. Compensation consultants and remuneration committees gear-up top executive remuneration. Auditors are effectively appointed by and report to the directors. And corporate regulators constantly battle to stay ahead of schemes devised by companies' lawyers and accountants to circumvent disclosure and tax rules.

1  
2  
3 But society is no longer satisfied. Criticisms include complaints of greed and  
4 excessive director rewards, erosion of shareholder value, the abuse of power by  
5 directors, and corporate failures culminating in the need for governments to bail out  
6 companies. The growing interest in corporate social responsibility reflects societies'

But society is no longer satisfied. Criticisms include complaints of greed and excessive director rewards, erosion of shareholder value, the abuse of power by directors, and corporate failures culminating in the need for governments to bail out companies. The growing interest in corporate social responsibility reflects societies' unease with the potential power of corporate entities and companies' response.

The purpose of this paper is not to propose curbs on board-level powers or to call for further regulation and the strengthening of governance codes. Rather, it reviews the way the original concept of the corporation has evolved and changed, which leads to a call for the re-invention of the corporate concept relevant to contemporary circumstances. The theoretical stance is that of the historian or evolutionary theorist, rather than of the lawyer or financial economist.

The potential contribution of this paper towards a general theory of corporate governance is a call for taxonomy by corporate types, with species and sub-species differentiated by their governance attributes; in other words by the way that power is or could be exercised over them. The paper also offers an alternative corporate governance paradigm introducing concepts of the Governing Body, the Executive Management and Stakeholder Liaison Groups in lieu of the classical processes and structures. The alternative model would shift power back towards shareholders and could reduce alleged excesses, including top management remuneration, and increase shareholder value. It is also argued that external auditors should report to the regulators not the directors.

Overall, this paper calls for scholars, regulators and practitioners to re-invent the limited-liability company. Such re-thinking would need to be backed by legislation and, of course, would meet enormous resistance from the corporate sector supported by the lobbying power of interested parties using shareholder funds to protect their

1  
2  
3 vested interests. But the overall argument of this paper is simple: limited liability is a  
4  
5 privilege granted by society, it is not an automatic legal right. What society gives  
6  
7 society can take away. Unless companies meet societies' expectations, investors  
8  
9 should again become liable for their companies' debts.  
10  
11

### 12 **The theoretical orientation of this paper**

13  
14  
15 As Pettigrew (1992 pages 163-182) wrote:

16  
17 *“Corporate governance lacks any form of coherence, either empirically,*  
18  
19 *methodologically or theoretically with only piecemeal attempts to try and understand*  
20  
21 *and explain how the modern corporation is run.”*  
22  
23

24  
25 Nearly twenty years later, authorities still call for reliable global governance  
26  
27 theory (Carver, 2010, Judge, 2010). Stewardship theory lies at the heart of corporate  
28  
29 governance, taking a legal perspective of the corporation, emphasising directors'  
30  
31 fiduciary duty, acting in the best interests of the shareholders as stewards of their  
32  
33 funds. The theory is rooted in the original belief that directors of limited companies  
34  
35 can be trusted (Barney and Hesterly, 2008). The stewardship view is central to  
36  
37 company law. Indeed, some authorities have raised the possibility of the convergence  
38  
39 of corporate governance principles towards a global standard (Coffee , 1999).  
40  
41  
42

43  
44 Agency theory takes an alternative view: directors are agents of the shareholders  
45  
46 but will maximize their own personal utility to the detriment of shareholders' interests  
47  
48 (Jensen and Meckling, 1976, Jensen, 2000). Anecdotal evidence is not hard to find.  
49  
50 This theoretical construct, with its statistic relevance, has dominated corporate  
51  
52 governance research to date, and has been the methodology adopted in the majority of  
53  
54 papers published in this journal.  
55  
56

57  
58 More recently, stakeholder theorists have questioned the legal duty of directors to  
59  
60 act solely on behalf of the shareholders, and called on companies to recognize a duty

1  
2  
3 to act in the interests of other stakeholders potentially affected by their actions  
4  
5  
6 (McWilliams and Siegal, 2001). Since this theory calls for the rethinking of the rights,  
7  
8 responsibilities and roles of companies in society, it might more appropriately be  
9  
10 called stakeholder philosophy.  
11

12  
13 In an endeavour to throw fresh light on the subject, this paper takes a different  
14  
15 perspective. Tracing the historical development of corporate governance thinking,  
16  
17 practice, and regulation over time it provides an alternative theoretical insight. Such  
18  
19 an evolutionary approach reflects the suggestion of Dawkins (1976) that culturally-  
20  
21 determined ideas are transmitted from person to person. Dawkins suggested that the  
22  
23 development of ideas is analogous to the natural selection, replication, and mutation  
24  
25 of physical genes. He coined the word 'memes' to cover such transferrable ideas.  
26  
27 Successful ideas propagate and spread, poor ones become extinct. So it is with  
28  
29 corporate governance, this paper argues.  
30  
31

32  
33 In methodological terms, the paper adopts a process approach (Pettigrew, 1979 and  
34  
35 1997, Langley, 1999). In other words, theory is developed from an understanding of  
36  
37 how situations come to be constituted, reproduced and adapted as ongoing processes  
38  
39 (Langley, 2007). As Pettigrew (1997 pages 337-348) explains the 'processual'  
40  
41 approach enables the exploration of:  
42  
43

44  
45 *... "human conduct and organizational life and to embed such dynamics over time in*  
46  
47 *the various layers of context in which streams of activity occur."*  
48  
49

50  
51 Adopting this process and evolutionary approach, this paper traces the  
52  
53 development of corporate governance ideas, practices and regulation longitudinally  
54  
55 and situationally, then identifies current frontiers and posits further possible  
56  
57 developments.  
58

## 59 **THE EVOLUTION OF CORPORATE GOVERNANCE**

60

### The early stages – merchants and monopolists

The word ‘governance’ has a long pedigree. Chaucer (c1343-1400) used it, though he could not decide how it should be spelt. Wilson (1976) wrote of the governance of Britain, and scholars such as Carver (1981, 1984) addressed the governance of cities, public agencies, and non-profit organizations. But although the phrase ‘corporate governance’ did not appear until the 1980s, the agency issue has long been recognized. Shakespeare (1596) understood corporate governance, though he did not use the phrase. Antonio, his Merchant of Venice, agonized as his ships sailed out of sight, the success of the venture and his fortune entrusted to others.

During the 17 and 18th centuries, the growing European empires - Holland, Portugal, Spain, and increasingly England - competed both economically and militarily around the world. Frequently the state or the crown gave charters to companies to trade with those empires. Royalty, members of the aristocracy and rich merchants often invested. Again, they were faced with the agency problem, not least because of slow communications.

In 1600, England’s Queen Elizabeth 1 granted a royal charter to the “Governor and Company of Merchants of London” to trade with the East Indies” giving the Honourable East India Company a monopoly over trade between England and Asia. The East India Company was a joint-stock company, with over 1,000 stock-holders who elected a governing body of 24 directors annually. The company was a powerful force for nearly three centuries, trading with India and China in cotton, silk, tea and opium. At one time the company administered parts of the British Indian Empire and ran a private army.

In 1602 the Republic of the Netherlands granted a charter to the Dutch East India Company to colonize and trade with Asia. The Dutch West India Company was

1  
2  
3 chartered a year later to run slaves from Africa to the Caribbean and North America.  
4  
5 Both companies were joint-stock companies, issuing stock to their investing stock  
6  
7 holders. Predictably, the success of corporate ventures allied with poor corporate  
8  
9 governance led to unrealistic expectations and subsequent corporate collapses,  
10  
11 sometimes associated with fraud. In 1606, England's James 1 established the Virginia  
12  
13 Company by royal charter to establish colonial settlements in North America. The  
14  
15 Hudson Bay Company was created by Royal Charter in 1670.  
16  
17  
18

19  
20 In 1720 the British House of Lords gave a monopoly to the South Sea Company  
21  
22 to trade with Spain's South American colonies. Unbelievably, the company agreed to  
23  
24 underwrite the British national debt, which led to massive speculation in its stock.  
25  
26 Then the bubble burst. Many of the investors lost their fortunes, the directors were  
27  
28 arrested, and their wealth confiscated.  
29  
30

31  
32 Just as today, voices were raised against such corporate excesses and risks. Adam  
33  
34 Smith (1759, 1776), a moral philosopher at the University of Glasgow considered by  
35  
36 many to be the father of modern economics, argued that society benefitted as  
37  
38 individuals pursued their own self-interest, because the free market then produced the  
39  
40 goods and services needed at low prices. But, like many academics today, he was  
41  
42 suspicious of businessmen. His well known comment offers a classic corporate  
43  
44 governance perspective:  
45  
46

47  
48 *"The directors of such companies, however, being the managers rather of other*  
49  
50 *people's money than their own, it cannot well be expected that they should watch over*  
51  
52 *it with the same anxious vigilance with which the partners in a co-partnery frequently*  
53  
54 *watch over their own... Negligence and profusion, therefore, must always prevail,*  
55  
56 *more or less, in the management of the affairs of such a company."*  
57  
58

59  
60 (Smith, Adam, 1776, *An Inquiry into The Wealth of Nations, Book V, page 439*)

1  
2  
3  
4  
5  
6  
7  
8 In the 18<sup>th</sup> century, colonist communities in North America suspected exploitation by  
9  
10 England and English companies. So when the states declared independence, creating  
11  
12 the United States of America in 1776, they tended to be suspicious of corporate  
13  
14 power. State legislators viewed the incorporation of a joint-stock company as a  
15  
16 privilege and imposed strict conditions on the granting of charters that allowed  
17  
18 companies to exist. The business activities of the company had to be clearly defined.  
19  
20 Charters were set for specific terms, not perpetuity. Companies could not own stock  
21  
22 in other companies. A company's right to operate could be terminated if it exceeded  
23  
24 the terms of its charter. American legislators were also wary of limiting the liability of  
25  
26 shareholders for their companies' debts.  
27  
28  
29  
30

### 31 32 **The mid-19th century - the limited-liability company is invented**

33  
34 At the start of the 19th century the only way for individuals to invest in business  
35  
36 was as a sole-trader, in a partnership, or as a shareholder in a joint-stock company. If a  
37  
38 business failed its creditors could pursue the owners into bankruptcy, which could  
39  
40 then lead to debtors' prison for the investor and the work-house for his family.  
41  
42 Clearly this was a disincentive to invest, unless one had direct oversight of the  
43  
44 business activities. But this was a period of great economic growth, generated by the  
45  
46 industrial revolution, firms needed external capital to expand faster than ploughed-  
47  
48 back profits would allow.  
49  
50  
51

52  
53 The French were the first to create a form of corporate incorporation, which  
54  
55 restricted shareholders' liability. From 1807, the Société en commandité par actions  
56  
57 limited the liability of external investors, but maintained executive directors' personal  
58  
59 exposure to corporate debt. These regulations were tightened in 1856.

Meanwhile in Britain, the need for companies to access capital without exposing external investors to the threat of bankruptcy was debated in Parliament. Some Members of Parliament called for a form of incorporation that mirrored the French system. But in the event the British Companies Acts of 1855 and 1862 gave limited liability to all shareholders, whether they were involved in the management of the company or not.

It was a brilliant invention. The company was a legal entity with many of the attributes of a real person: it could contract, employ, own assets and incur liabilities, yet the shareholders were no longer responsible for the company's debts. Its existence was independent of the shareholders and its shares could be sold. Nevertheless, ownership remained the basis of power over the company. The shareholders appointed the directors, who reported to them. That underlying concept is still the underpinning of all modern companies, though the reality of power is now very different.

The opportunity to incorporate companies which limited shareholder liability proved very successful. The writers of the Savoy operas, Gilbert and Sullivan (1893) satirised the trend in their opera Utopia Ltd.

*And soon or late I always call*

*for Stock Exchange quotation.*

*No scheme too great, and none too small*

*For companification!*

*All hail, astonishing fact!*

*All hail, invention new,*

*The Joint Stock Company Act*

*of Parliament Sixty-two.*

1  
2  
3 During the 19<sup>th</sup> century many of the states within the United States passed  
4 legislation to allow the incorporation and control of companies. But the right of  
5 individual states was challenged at the federal level. In 1819, the United States  
6 Supreme Court over-ruled the lower court in the state of New Hampshire, which had  
7 revoked the royal charter given to Dartmouth College by the English King George the  
8 third. Many states saw this as a federal attack on state sovereignty and rewrote their  
9 laws to circumvent the Dartmouth ruling (Friedman, 1973). To this day, companies in  
10 the United States are incorporated at the state not the federal level.  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21

22 The arrival of the industrial age in the United States brought great wealth to some  
23 companies and their owners. State constitutions were amended and laws re-written to  
24 be more amenable to companies. Shareholder limited liability arrived. Charter battles  
25 were fought to allow conglomerates. Eventually, corporate charters ceased to limited  
26 companies' activities and their life span.  
27  
28  
29  
30  
31  
32  
33

34 The concept of the limited-liability company spread throughout British Empire of  
35 the late-19<sup>th</sup> century. The company law of Australia, Canada, some Caribbean islands  
36 which are now tax havens, India, Malaysia, New Zealand, Singapore, South Africa  
37 and other African countries still reflect those origins. Moreover, although countries'  
38 laws and regulations evolved to reflect their changing circumstances, Commonwealth  
39 case law can still be used as precedents. Hong Kong, now a special administrative  
40 region of China, still retains its British-orientated company law and legal system.  
41  
42  
43  
44  
45  
46  
47  
48  
49

### 50 **The late 19th and early 20th centuries – corporate groups and private companies**

51 During the 19<sup>th</sup> century companies in the UK were incorporated as public  
52 companies to raise capital. Each company was a stand-alone entity. There were  
53 mergers and amalgamations, but rather than form corporate groups, typically a new  
54 company was formed to take over the assets and liabilities of the merging companies,  
55  
56  
57  
58  
59  
60

1  
2  
3 which were then wound up. But around the turn of the century, it was realised that in  
4 many jurisdictions, limited companies could own shares in other limited companies.  
5  
6 The corporate group had arrived, with a holding company, and pyramids and chains of  
7  
8 wholly or partly-owned subsidiaries.  
9  
10  
11

12 Another development in the later years of the nineteenth and early twentieth  
13 centuries was the incorporation of companies, not to raise capital, but to provide the  
14 protection of limited liability to family firms and new entrepreneurial manufacturing  
15 businesses. This trend was recognized in Britain by the Companies Act 1907, which  
16 introduced the concept of the private company, with fewer restrictions on disclosure  
17 since it was restricted in size and not allowed to raise funds from the public. Today, of  
18 course, the number of private companies far exceeds those incorporated as public  
19 companies in all jurisdictions.  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32 Now the original nineteenth century concept of the limited-liability public  
33 company, with ownership at the heart of power over the company had become diluted  
34 (Dunlavy, 1998). Around the world, the early years of the twentieth century saw  
35 significant economic problems. But the growing size of corporate enterprises and the  
36 increasing number, geographical spread, and diversity of their shareholders' led to a  
37 shift of power from shareholders towards boardrooms. In their seminal study, still one  
38 of the most cited works in the corporate governance lexicon, Berle and Means (1932,  
39 pages 44 and 82/83) demonstrated this shift of power in large United States  
40 corporations. They expressed concern about the growing power of large companies in  
41 society, observing that:  
42  
43

2  
3  
4 “...management can become a self-perpetuating body even though its share in  
5  
6 ownership is negligible...The usual stockholder has little power over the affairs of the  
7  
8 enterprise and his vote is rarely capable of being used as an instrument of democratic  
9  
10 control. The separation of ownership and control has become virtually complete.”

11  
12 The updated 1968 edition (page preface xxx and 82) concluded that:

13  
14  
15 “...the ultimate ownership of the big (American) corporations has become ever more  
16  
17 widely dispersed, and control has become increasingly separated from ownership.”

18  
19  
20 Economic problems, the need to restore shareholder rights, and perhaps reign in  
21  
22 overly-powerful corporations led to the creation of the US Securities and Exchange  
23  
24 Commission (SEC) in 1934, providing some protection at the Federal level for  
25  
26 investors even though US corporations could only be incorporated at the level of the  
27  
28 state.  
29  
30

### 31 32 **The 1970s - audit committees, industrial democracy, and corporate** 33 34 **accountability**

35  
36 Interestingly, following the Berle and Means study, little interest was shown in  
37  
38 the governance of companies for over forty years: in the 20<sup>th</sup> century the focus swung  
39  
40 towards management activities. But in 1972, the SEC required US listed companies to  
41  
42 create a standing audit committee of the main board, composed of independent  
43  
44 outside directors, to act as a bridge between the external auditor and the main board,  
45  
46 ensuring that directors became aware of any issues that had arisen between the auditor  
47  
48 and the company’s finance department. A 1977 UK Parliamentary Bill, which would  
49  
50 have also required audit committees, failed because although many listed companies  
51  
52 had non-executive directors they tended to be in a minority, and the concept of  
53  
54 independence in directors did not exist (Tricker, 1978).  
55  
56  
57  
58  
59  
60

1  
2  
3 During the 1970s, the European Economic Commission (EEC) issued a series of  
4 draft directives seeking company law harmonisation throughout the member states.  
5  
6 The draft fifth directive, in 1972, proposed that the unitary board system, in which the  
7  
8 board of directors had both executive and outside members, be replaced by the two-  
9  
10 tier executive board and supervisory board governance system practised in Germany  
11  
12 and Holland, in which a supervisory board monitors and oversees the work of an  
13  
14 executive board, which runs the business. The German supervisory board also  
15  
16 reflected the concept of co-determination, with equal numbers of employee and  
17  
18 shareholder representative members. The British response was a report by Lord  
19  
20 Bullock (1977), which suggested that the unitary board should continue, but include  
21  
22 worker directors elected by the employees. Neither the EEC's directive nor the  
23  
24 Bullock proposals were well received and neither was accepted. The 1970s also saw  
25  
26 calls in both the United States and Britain for a rethink of the place of large  
27  
28 corporations in society, a call which was to disappear during the free-market years of  
29  
30 the 1980's, only to reappear more recently as an interest in corporate social  
31  
32 responsibility.

### 40 **The 1980's and 1990's – corporate abuse and corporate governance codes**

41  
42 In the early '80s, concerns about the way companies were controlled and held  
43  
44 accountable were over-shadowed by their commercial success. But later in that  
45  
46 decade the phrase 'corporate governance' appeared. Although, it has to be admitted,  
47  
48 developments in the subject were responses to corporate collapses, board level  
49  
50 excesses, and dominant chief executives and chairman, rather than the result of  
51  
52 academic, research-based deliberations.  
53  
54  
55  
56

57  
58 In the United States, the investment house Drexel, Burnham, Lambert was  
59  
60 investigated by the SEC in 1986 and accused of insider trading, stock manipulation

1  
2  
3 and failure to disclose ownership. According to the court papers, Michael Milken,  
4  
5 head of its junk-bond department, had a secret agreement with Ivan Boesky, another  
6  
7 name to go down in corporate governance history, to exchange insider information  
8  
9 and hold stock for each other in violation of securities law.  
10  
11

12  
13 In Australia, a 1989 report from the National Companies and Securities  
14  
15 Commission, on the collapse of Rothwells Ltd. a listed financial institution,  
16  
17 commented that “at no time did the board perform its duties satisfactorily.” The stock  
18  
19 market collapse in late 1987 provided the catalyst that finally brought the company  
20  
21 down, though earlier the auditors had refused to sign the 1988 accounts, and the  
22  
23 official report disclosed “massive private drawings and failure to disclosure loans to  
24  
25 directors”.  
26  
27

28  
29 In Japan, Nomura Securities was accused of having too close links with their  
30  
31 regulator, having offered well-paid sinecures to senior bureaucrats on retirement.  
32  
33 Lavish payouts to major institutional clients to cover losses and links with a *yakuza*  
34  
35 underworld syndicate were also alleged.  
36  
37

38  
39 In the UK, Robert Maxwell built up a massive publishing empire during the ‘80s  
40  
41 despite an admonition that he had received in the 1970s from government inspectors  
42  
43 never to run a public company again. The Robert Maxwell Group plc owned nearly  
44  
45 half of two other listed companies – the Maxwell Communication Corporation plc and  
46  
47 the Mirror Group Newspaper plc. Maxwell dominated both these companies and their  
48  
49 directors, resenting any form of criticism. In 1991, he drowned in suspicious  
50  
51 circumstances, leading the banks to call in the company’s massive loans. The  
52  
53 companies could not respond and an inquiry discovered that Maxwell had secretly  
54  
55 withdrawn hundreds of millions of pounds from his companies' pension funds to save  
56  
57 the companies from bankruptcy.  
58

59  
60

Such scandals and the abuse of board-level power around the world led to calls for a rethink of the way companies were directed and held accountable at the top. In the United States, the Treadway Commission, formed in 1985, considered fraudulent corporate financial reporting. Their first report<sup>i</sup> (1987) led to the creation of the Committee of Sponsoring Organizations of the Treadway Commission<sup>ii</sup> (COSO), a private-sector initiative to encourage executive management and boards towards more effective business activities.

Other countries produced corporate governance codes. The UK's Cadbury Report (1992) on the financial aspects of corporate governance was the first. It called for the wider use of independent non-executive directors, the introduction of an audit committee of the board with independent members, the division of responsibilities between the chairman of the board and the chief executive, the use of a remuneration committee of the board to oversee executive rewards, the introduction of a nomination committee with independent directors to propose new board members, and reporting that the corporate governance code had been followed or, if not why not.

Following the Cadbury Report many other countries with financial markets published their own code – Australia, Canada, France, Hong Kong, Singapore, South Africa and many others<sup>iii</sup>. International organizations including the OECD, the World Bank and the Commonwealth<sup>iv</sup> produced corporate governance guidance, principles and codes of good practice. Some institutional investors and individual companies also produced corporate governance codes. As well as producing the first corporate governance report, Britain has subsequently produced 11 further corporate governance reports<sup>v</sup>, more than any other country to date. The Australian Stock Exchange codes and the King reports from South Africa are noteworthy since they emphasise the need for companies to take an inclusive view of their relationships, not

1  
2  
3 only with shareholders, but other groups in society affected by their activities, and  
4  
5 introduced the ethical element in corporate governance activities.  
6  
7

8 The phrase 'corporate governance' also arrived in the 1980s and was quickly  
9  
10 adopted world wide. Cochran and Wartick (1988) published an annotated  
11  
12 bibliography of corporate governance publications: it had 74 pages. Today, Google  
13  
14 accesses over 12 million references to corporate governance and Bing 23 million.  
15  
16 Research into corporate governance also began to develop in the late 1980s. Corporate  
17  
18 Governance – an International Review was founded in 1992.  
19  
20  
21

### 22 **The late 20th century – complex corporate groups, complex ownership relations**

23

24  
25 In the later part of the twentieth century, multi-national companies expanded  
26  
27 dramatically, both through internal growth and external merger and acquisition. Many  
28  
29 groups of companies now operated globally and had become complex from a  
30  
31 governance perspective. Some had massive pyramids of wholly or partly-owned  
32  
33 subsidiaries and associated companies held at many levels, but with each member  
34  
35 company incorporated as a legal entity, with its board of directors, auditors, and  
36  
37 governance and reporting requirements. Other groups were organized in networks of  
38  
39 complex cross-holdings, sometimes as the result of joint ventures or mergers and  
40  
41 acquisitions, sometimes for strategic reasons (as with the Japanese *keiretsu*), and some  
42  
43 to obtain tax benefits or to take advantage of limited disclosure.  
44  
45  
46  
47

48 Another governance arrangement, found particularly in Italy, Hong Kong and  
49  
50 some other jurisdictions, was the formation of chains of listed companies. Lead  
51  
52 shareholders could then leverage financial control over the other companies in the  
53  
54 chain and, consequently, exercise operational control over companies lower in the  
55  
56 chain, whilst owning only a small fraction of their voting equity. Some companies  
57  
58 were now also listed on exchanges around the world. Whilst in some countries,  
59  
60

1  
2  
3 particularly China and Russia, this was the era of the privatization and partial listing  
4  
5 of state enterprises.  
6

7  
8 During the 20th and early 21st centuries, shareholders lost significant power over  
9  
10 widely-held public, listed companies. No longer were they appointing directors. The  
11  
12 nomination process in many countries had been usurped by incumbent directors, and  
13  
14 the election process had become a façade with proxy votes. Institutional investors now  
15  
16 held a significant proportion of the shares on many exchanges, but calls on them to  
17  
18 exercise more governance power seldom carried real weight. Sovereign funds from  
19  
20 export-benefitting and oil rich countries were also now investing in companies in  
21  
22 other countries. Further diversity was added as some exchanges introduced secondary  
23  
24 boards to invest in smaller, riskier ventures, typically with new and sometimes relaxed  
25  
26 listing rules.  
27  
28  
29  
30

31  
32 Moreover, strings of agents now frequently stood between the ultimate owner of  
33  
34 a share and the company in which those funds were invested: brokers, agents,  
35  
36 sponsors, share registrars, institutional investors, pension funds, and hedge funds, for  
37  
38 example. All had the potential to filter relations between company and its ultimate  
39  
40 owners, and distort voting rights. The original corporate concept of the limited-  
41  
42 liability company had become debased, diluted, and distorted: although the essential  
43  
44 idea remained that shareholders' liability for their companies' debts was limited.  
45  
46  
47

### 48 **Contemporary frontiers of corporate governance**

49

50  
51 The first generation of international corporate governance research typically  
52  
53 examined governance mechanisms such as board composition and equity ownership  
54  
55 in individual countries, mirroring the U.S. research that had preceded it. The second  
56  
57 generation of international corporate governance research, however, recognized the  
58  
59  
60

1  
2  
3 impact of differing legal systems on the structure and effectiveness of corporate  
4  
5 governance and compared systems across countries (Denis and McConnell, 2003).  
6  
7

8 It is now widely recognized that context and culture<sup>vi</sup> play a significant role in  
9  
10 determining corporate governance practices around the world. Defining corporate  
11  
12 governance as the way power is exercised over companies, three broad categories can  
13  
14 be identified:  
15  
16

17 The *dispersed ownership model* is prevalent in the US, the UK, and some  
18  
19 Commonwealth countries, whose legal systems are based on common law building on  
20  
21 legal case precedents. In this model equity ownership is spread among institutional  
22  
23 investors and individuals with none dominating, stock markets are liquid, with a  
24  
25 strong market for control of the corporation. The corporate governance structure  
26  
27 employs unitary boards with independent outside directors.  
28  
29

30 The *concentrated ownership model* is found in some Continental European countries  
31  
32 and countries previously influenced by them, whose legal systems are based on civil  
33  
34 law relying on the legislature's enactments. Stock markets tend to lack liquidity and  
35  
36 there is a poor or no market for corporate control. Companies are financed by non-  
37  
38 equity interests as well as equity ownership. The corporate governance structure uses  
39  
40 two-tier boards with separate supervisory and executive boards.  
41  
42  
43

44 The *dominated ownership model* includes Asian networked groups<sup>vii</sup> such as the  
45  
46 Japanese *keiretsu* and the *chaebol* of South Korea, listed companies with majority  
47  
48 family ownership as found, for example, in some Continental European countries and  
49  
50 Hong Kong, and privatized, listed but state-dominated companies in, for example,  
51  
52 Singapore and China. The legal system reflects the local context, culture and,  
53  
54 sometimes, political situation. Stakeholder interests can be as important as equity  
55  
56  
57  
58  
59  
60

1  
2  
3 ownership. Diverse corporate governance structures reserve significant power to the  
4  
5 dominating interest.  
6  
7  
8  
9

10  
11 Figure 1 about here  
12  
13  
14

15 The three basic models emphasise the significance of context and culture in  
16  
17 understanding corporate governance around the world. Clearly, this paper cannot  
18  
19 explore these different governance practices in detail, but a brief survey may help to  
20  
21 emphasise the cultural significance of the three models distinguished above.  
22  
23

### 24 25 **Contemporary corporate governance in Japan**

26  
27 *Keiretsu* are networks of Japanese companies connected through cross-holdings,  
28  
29 frequently including a financial institution, which tend to inter-trade extensively. The  
30  
31 classical model of the *keiretsu* reflects the social cohesion within Japanese society,  
32  
33 emphasising unity throughout the organisation, non-adversarial relationships, lifetime  
34  
35 employment, enterprise unions, personnel policies encouraging commitment,  
36  
37 initiation into the corporate family, decision-making by consensus, and with  
38  
39 promotion based on loyalty and social compatibility as well as performance.  
40  
41  
42

43  
44 Traditionally, investors have played a relatively small part in corporate affairs.  
45  
46 The classical model of Japanese corporate governance has a stakeholder rather than a  
47  
48 shareholder orientation. Power lies within the *keiretsu* network. In the classical  
49  
50 *keiretsu* model, boards of directors tend to be large and are, in effect, the top layers of  
51  
52 the management pyramid. Independent outside directors have no place in the classical  
53  
54 model. Some directors may have served with other companies in the *keiretsu* network,  
55  
56 others might have been appointed from amongst the industry's government regulators  
57  
58 (known as *amakaduri* or “those descended from heaven”). However, the classical  
59  
60

1  
2  
3 model has recently come under pressure with challenges from overseas institutional  
4 investors and reflecting the country's continuing economic weakness. In 2008, eight  
5 international investment funds called for greater shareholder democracy and a report  
6 from the Japanese Council for Economic and Fiscal Policy suggested that anti-take  
7 over defences should be discouraged. New company law was introduced which  
8 permitted an alternative, more Anglo-American form of corporate governance with  
9 independent outside directors. But few companies have yet embraced this approach.

### 20 **Contemporary corporate governance in South Korea**

21  
22 *Chaebol* groups<sup>viii</sup> in South Korea developed after the Second World War when  
23 the government advanced loans on attractive terms to existing family-based firms to  
24 stimulate economic revival. Over time some of these firms prospered and became  
25 large groupings of associated companies. Despite public listing, many *chaebol* groups  
26 are still controlled by dominant family interests. Attempts to introduce independent  
27 outside directors into South Korean boards have had only limited effect against the  
28 entrenched power of the existing block owners. At times this has led to protests from  
29 employees. The South Korean Government has endeavoured to reduce the power of  
30 the *chaebol*, through enforced sales of companies in the groups, with limited results.

### 43 **Contemporary corporate governance in Overseas Chinese family companies**

44  
45 Research into the management of overseas Chinese<sup>ix</sup> companies has suggested  
46 some distinguishing characteristics, which highlight governance practices (Redding  
47 and Wong, 1986, Redding 1993). Studies suggest that overseas Chinese companies,  
48 even though listed, are typically family centric with close family control, through a  
49 majority equity stake kept within the family. The companies tend to be  
50 entrepreneurial, often with a dominant entrepreneur so that decision making is  
51 centralised, with close personal links emphasizing trust and control, paternalistic in  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 management style, in a social fabric dependent on relationships and social harmony,  
4  
5 avoiding confrontation and the risk of the loss of "face", and strategically intuitive  
6  
7 with the business seen as more of a succession of contracts or ventures, relying on  
8  
9 intuition, sometimes superstition and tough-minded bargaining rather than strategic  
10  
11 planning, brand-creation and quantitative analysis.  
12  
13

14  
15 Many Hong Kong family-dominated, listed companies, though having to follow  
16  
17 the stock exchange listing rules and conform to the regulation of the Hong Kong  
18  
19 Securities and Futures Commission, are incorporated in overseas tax havens.  
20  
21 Typically outside shareholders are in a minority, and the regulatory authorities  
22  
23 emphasise the importance of disclosing and controlling related party transactions.  
24  
25  
26

### 27 **Contemporary corporate governance in China**

28  
29 Business enterprises in China can be classified into three types. *State-owned*  
30  
31 *enterprises (SOEs)*, which vary in size, can be owned at the national, provincial or  
32  
33 local level. Many have been corporatized, and partly privatized through listings in  
34  
35 Shanghai, Shenzhen, Hong Kong or overseas stock exchanges. *Collectively-owned*  
36  
37 *enterprises*, including rural township and village entities (TVEs), and *privately-owned*  
38  
39 *organizations*, which are defined as firms with more than seven employees, created  
40  
41 from the privatization of state SMEs, or through the 'dual-track' provisions which  
42  
43 allowed new enterprises to run alongside state enterprises, and small individually-  
44  
45 owned enterprises to run alongside state enterprises, and small individually-  
46  
47 owned enterprises with less than eight employees (Leng Jing, 2009).  
48  
49

50  
51 For the SOEs, China has created a unique form of corporate governance structure  
52  
53 building on the practices of other countries around the world. This comprises a  
54  
55 management board of directors, with at least a third independent outside directors, and  
56  
57 a board of supervisors, with both worker representatives and other members - thus  
58  
59 combining elements of both the German-style two-tier board model and the  
60

1  
2  
3 independent, outside directors of the unitary board, as well as recognizing China's  
4 traditional concept of employees being masters of enterprises (see figure 1).  
5  
6

7  
8 However, unlike the German model, which calls for an equal number of  
9 shareholder and employee representatives, reflecting German co-determination law,  
10 Chinese company law does not specify the proportion of shareholders' representatives  
11 and employees' representatives on boards of supervisors, other than requiring at least  
12 a third to be worker representatives. Moreover, the supervisory board in China lacks  
13 the power to hire and fire directors and has no direct responsibility to the shareholders  
14 as in the Germany model. Consequently the formal power of the Chinese supervisory  
15 board is relatively weak and it has to act through influence, such as the chairman  
16 being the local Communist party representative.  
17  
18  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28

29 A unique aspect of the governance of China's listed SOEs is the role played by  
30 the state. The China Securities Regulatory Commission (CSRC) is the formal  
31 regulator, liaising with the SOEs and stock exchanges, developing corporate law and  
32 governance codes, and ensuring reporting and compliance. The State-owned Assets  
33 Supervision and Administration Commission (SASAC), on the other hand, holds the  
34 state's shares, effectively being institutional investor on the state's behalf. As such it  
35 is the largest institutional investor in the world. SASAC can play a significant role in  
36 the governance of companies, including the appointment and removal of CEOs, the  
37 approval of major investments and funding, and overseeing any strategic  
38 developments that might affect the interests of the people, represented by the  
39 Communist Party and, effectively, the State. As shown in figure 2, both SASAC and  
40 CSRC are tied to the State Council and ultimately the National People's Congress  
41 through links with government bodies.

Figure 2 about here

### Contemporary corporate governance in the other BRIC countries

The significance of China and the other BRIC countries – Brazil, Russia and India – to the world economy after the global financial crisis has become apparent. Consequently, the corporate governance in those countries has acquired a new significance.

#### *Russia*

Like China, Russia is a transitional economy which faced the need to privatize its state enterprises. But many Russian citizens were dubious about privatisation, believing that industry should be run by the state, that everyone should be guaranteed a job, and that incomes should be controlled. To overcome resistance and make changes irreversible, the state transferred ownership in three ways: directly to all Russian citizens through the free distribution of vouchers, by investment tenders in which investors had to make substantial investments, and by loan-for-shares auctions of large enterprises. Fraudulent practices, violence and social injustice occurred and many of the major businesses that emerged were dominated by relatively few people, many of them now very rich.

Initially the privatized companies adopted the unitary board structure, with some independent outside directors, reflecting the US and UK/Commonwealth models. But ownership concentration was high, and companies were dominated by controlling shareholders, often the previous managers. Minority shareholders saw their rights violated. Moreover, state interests sometimes took precedence. Faced with the domination of many boards and widespread corruption, there was a call for a better understanding of corporate governance.

1  
2  
3 A Russian corporate governance manual was produced with advice from the  
4  
5 OECD and the International Finance Corporation. Under the corporate governance  
6  
7 code and company law, companies are governed by a board of directors (sometimes  
8  
9 confusingly called the supervisory board) with both independent directors and  
10  
11 management directors, elected by the shareholders, and an executive (or management)  
12  
13 committee of the board.  
14  
15

16  
17 Today there is more transparency, standards for corporate governance are  
18  
19 more widely understood, many of original managers have been changed, and losses  
20  
21 through unfair practices has been reduced. But since the presidency of Vladimir  
22  
23 Putin, the role of the state has expanded and government influence over some  
24  
25 companies has increased. Some ownership has been transferred back to the state by  
26  
27 acquisition or expropriation.  
28  
29  
30

### 31 *India*

32  
33 As with China and Russia, history played a part in the development of Indian  
34  
35 corporate governance. India was part of the British Empire ('the jewel in the crown'  
36  
37 of Queen Victoria) and like Hong Kong and Singapore benefited from the early  
38  
39 creation of government administrative processes, with a reliable rule of law including  
40  
41 company law backed by a reliable judiciary.  
42  
43  
44

45  
46 Following independence, India took a socialist road with large state-owned  
47  
48 enterprises and the public sector dominating the economy. Bureaucracy grew and  
49  
50 inefficiency, corruption and nepotism flourished. By the 1990s the need for India to  
51  
52 develop its business infrastructure and attract capital was recognised. The first  
53  
54 corporate governance code was published in 1998 by the Confederation of Indian  
55  
56 Industry (CII). A year later a government committee released India's National Code  
57  
58 on Corporate Governance. Reflecting international standards, the code was approved  
59  
60

1  
2  
3 by the Securities and Exchange Board of India (SEBI) and incorporated into stock  
4  
5 exchange listing rules.  
6

7  
8 Corporate governance standards in India's top-tier listed companies are high.  
9  
10 But this commitment is not yet general. Small and medium capital companies often  
11  
12 seem unconvinced of the value of corporate governance activities and expenditures.  
13  
14 As in other parts of the world, interest in corporate governance in India was a reaction  
15  
16 to corporate scandals, including stock price manipulation. In 2002, reflecting  
17  
18 international concern following the USA Enron debacle, the Indian government set up  
19  
20 a high-level committee to examine corporate auditing and independent directors. The  
21  
22 report called for independent directors to represent at least 50% of the board of listed  
23  
24 companies, strengthened the definition of independence and called for the rotation of  
25  
26 audit partners (but not audit firms).  
27  
28  
29  
30

31  
32 In many companies in India, boards are dominated by majority shareholders.  
33  
34 Pre-emption rights for minority shareholders are frequently ignored. Competent  
35  
36 regulators and capital market action are needed to protect minority investors. A  
37  
38 corporate governance rating by the Asian Corporate Governance Association assessed  
39  
40 India's corporate governance as 'fair to poor'.  
41  
42

#### 43 *Brazil*

44  
45  
46 In Brazil, many companies are either state-owned or family-dominated. The  
47  
48 Brazilian Institute of Corporate Governance was founded in 1995 and in 1999  
49  
50 produced the Brazilian Code of Best Practice of Corporate Governance<sup>x</sup>, which is now  
51  
52 in its fourth edition (2009). Brazil's economy is booming, despite a Byzantine tax  
53  
54 system and endemic poverty and corruption (Shachar, 2010). But Brazilian company  
55  
56 law and the code have three unusual corporate governance features – the fiscal  
57  
58 council, the family council, and the advisory board.  
59  
60

1  
2  
3 A fiscal council can be established under a company's Articles of  
4  
5 Incorporation, or at the request of shareholders. The role of the council is to inspect  
6  
7 the work of the board and the activities of the company, to ensure compliance with  
8  
9 legal and statutory duties, to provide an opinion on the annual management report and  
10  
11 on significant board proposals for investment plans, changes to capital, and dividend  
12  
13 payouts. The fiscal council is required, at least quarterly, to analyze and comment on  
14  
15 the financial statements and provide an opinion to the shareholders general meeting  
16  
17 on board proposals. Fiscal councils have the right to consult with outside  
18  
19 professionals, and are typically recognized as adding value to the company's owners  
20  
21 by providing independent control.  
22  
23  
24  
25  
26

27 In family-dominated companies in Brazil, the code encourages the creation of  
28  
29 a family council, whose role is to discuss family issues and the alignment of its  
30  
31 members' expectations with those of the other shareholders. Family councils enable  
32  
33 boundaries to be set between family and company interests, the preservation of  
34  
35 longer-term family values, and the formalization of succession planning for family  
36  
37 members in both management and on the board. Family councils can also consider  
38  
39 issues of inheritance and the transfer of property, which cannot properly be considered  
40  
41 by the shareholders' meeting.  
42  
43  
44  
45

46 The articles of association of some Brazilian companies also provide for an  
47  
48 advisory board. The code suggests that "the existence of an advisory board,  
49  
50 preferably made up of independent members, is good practice, particularly for  
51  
52 organizations taking the first steps in the adoption of good practices of corporate  
53  
54 governance. It allows independent members to contribute to the organization and  
55  
56 gradually improve its corporate governance." The code calls for the advisory board's  
57  
58 performance to be guided by the same principles that govern the Board of Directors.  
59  
60

### The central thesis and argument of this paper

The evolution of the limited-liability company has now been traced from the elegantly simple and superbly successful concept of the 19<sup>th</sup> century to the complex, diverse and massive operations that typify listed companies today. The original basis for power<sup>xi</sup> over companies was ownership. But over the years that power has swung from owners to directors, to the extent that today shareholders, even institutional shareholders, have relatively little power over the companies they own. This supports the central thesis of this paper: that the original concept of the limited-liability company no longer reflects reality, the essential model has been corrupted. Yet this concept is still the basis for company law and corporate regulation around the world. The relevance of the context and culture of company law jurisdictions and financial market regulation has also been shown.

Society today is no longer satisfied with corporate behaviour. Evidence is widespread. Questions are asked about tax-payer support for failing financial and manufacturing companies. Many people see no reason for tax-payers to be liable for corporate debt, just because these companies are 'too big to fail'. Perceptions of top management greed, remuneration excesses, and the dilution of shareholder value through large top management rewards are widespread. Calls are heard for controls on allegedly excessive top management remuneration, including golden handshakes, golden parachutes and equity-linked performance bonuses, particularly where they seem to be rewards for failure. Many cases have been reported of top management domination and abuses of power. Calls for stakeholder involvement are heard, and corporate governance reports increasingly emphasise CSR, sustainability, ethics, and enterprise risk management.

1  
2  
3 The originators of the limited-liability company in the 19th century created a  
4 corporate governance system in which society required them to meet specific roles  
5 and responsibilities, and bounded their activities. This highlights the central argument  
6 of this paper: companies again need to be held responsible for meeting societies'  
7 expectations. Incorporating a company, in which shareholders are not responsible for  
8 their company's debts, should require them to meet societies' expectations.

Otherwise shareholders should accept responsibility for those debts.

Limited liability is a privilege not a right. What society grants, it can take away.

Power in society should be exercised through its legislators, not by companies through their directors. In other words, if a company wants limited liability it needs to meet societies' expectations. The concept of the corporation needs to be re-invented to reflect present circumstances and meet society's expectations.

### **Re-inventing the limited liability company – the need for a taxonomy**

However, before such thinking can be developed, a dilemma has to be resolved. The classification of corporate entities has not changed for over 100 years. Around the world, limited companies are still divided into just two categories: public and private (those that can invite the public to subscribe for their shares and those that cannot).

Today that is a totally inadequate categorization of corporate entities. Before we can pursue the radical suggestions in this paper a classification scheme or taxonomy is needed that distinguishes different species and sub-species of corporate entity. Too many different types of corporate entity are currently treated as though they were homogeneous. One approach might be to differentiate ownership and governance structures. In other words, the way that power is, or could be, exercised over companies might provide a basis for distinguishing corporate types.

What different types of company might be recognized if the limited company was to be re-invented today? Further research will be needed to develop a tenable taxonomy of corporate entities, but the following may trigger some thoughts. The first major category could be public companies that is those with external investors. Sub-categories might differentiate widely-held listed companies, listed companies dominated by a single or a group of shareholders, and listed companies dominated by another listed company. The public companies category could also embrace, state chartered companies with a minority of their shares listed, and public companies not listed on a stock exchange. The second major category could be private companies, sub-divided into group holding (parent) companies, wholly owned subsidiaries of a group holding company, subsidiaries of another company not a holding company, partly owned subsidiaries, associated companies dominated by another company, private equity firms incorporated as companies, private companies held by family interests, and joint venture companies. A third major category could embrace partnerships, trusts and co-operatives, sub-divided into partnerships without limited liability, partnerships with limited liability, private equity firms, hedge funds, sovereign funds, and co-operatives.

Such a categorization would need to cover all types of corporate entity in every jurisdiction, including, for example, South Korean chaebols, Japanese keiretsu and Italian chained companies. It would need to include entities in different cultures, with different legal systems, institutions, and regulatory bodies. There also seems little justification for excluding other corporate types such as NGOs, charities, professional bodies and not-for-profit organizations.

As with all eco-systems, diversity tends to be useful. The rich variety of governance and organizational forms shown above suggests that the frontiers of

1  
2  
3 corporate diversity, far from converging, are evolving and multiplying fast. Indeed, it  
4  
5 can be argued that the era of the listed, public company has reached its zenith.

6  
7  
8 Nevertheless, such companies still form the backbone of investment around the world,  
9  
10 and are the corporate governance form considered further in this paper. Other  
11  
12 researchers need to pursue the governance of alternative business forms.

### 13 14 15 **Re-inventing the limited liability company – unresolved issues**

16  
17 Before the company can be re-invented for the 21st century a fundamental  
18  
19 philosophical issue will have to be resolved: how do societies believe power should be  
20  
21 exercised over companies in their midst? The economic, social and political context  
22  
23 today is vastly different from that of the nineteenth century when the limited company  
24  
25 was first invented. The scale, diversity and significance of companies are of a  
26  
27 different order. A discussion is needed on the rightful place of companies in society  
28  
29 (Friedman, 2002, 2008). Such a discussion has already begun as can be seen in the  
30  
31 widespread interest in corporate social responsibility and sustainability. The work of  
32  
33 the Tomorrow's Company organization has been pursuing related issues for some  
34  
35 years<sup>xii</sup>. Obviously, the dimensions of such research and the ensuing debate are  
36  
37 immense and, hopefully, this journal and its readers will make an important  
38  
39 contribution.

40  
41  
42 Before a satisfactory corporate governance model can be developed three  
43  
44 corporate governance paradoxes also need to be resolved. These might be called the  
45  
46 principle or rule paradox, the ignorance of independence paradox, and the  
47  
48 conformance/performance paradox.

### 49 50 51 **The principle or rule paradox**

52  
53  
54 Many commentators refer to the 'Anglo-American' approach to corporate  
55  
56 governance. They contrast the unitary board, which has both executive and non-  
57  
58  
59  
60

1  
2  
3 executive directors in the Anglo-American common law jurisdictions, with the two  
4  
5 tier, supervisory and executive boards of the Continental European and other civil law  
6  
7 countries.  
8  
9

10 But in reality there are fundamental differences between American and British  
11  
12 concepts of corporate governance. The under-pinning of American corporate  
13  
14 governance is mandatory governance determined by law: follow the legal  
15  
16 requirements or risk the penalties. By contrast the basis of corporate governance in  
17  
18 Britain and other Commonwealth countries, whose company laws reflect earlier  
19  
20 British influence, rely on a discretionary approach of governance by principle: comply  
21  
22 with the code or explain why the company has not.  
23  
24  
25  
26

27 Some years ago there was a widespread belief that corporate governance  
28  
29 around the world would gradually converge on the American model, not least because  
30  
31 the world needed access to American capital. That is no longer the case. So this  
32  
33 paradox remains unresolved.  
34  
35

### 36 **The performance/conformance paradox**

37

38 The second paradox relates specifically to unitary boards, which are  
39  
40 responsible for ensuring both the performance of the enterprise and its conformance.  
41  
42 In other words, the board is expected to be involved in strategy formulation and policy  
43  
44 making, whilst also supervising management performance and ensuring  
45  
46 accountability. It has been suggested that this means the unitary board is effectively  
47  
48 marking its own examination papers. Of course, the two-tier board structure avoids  
49  
50 this problem by having the executive board responsible for performance and the  
51  
52 supervisory board for conformance, with no common membership allowed.  
53  
54  
55  
56

57 To overcome the apparent dilemma of the unitary board, corporate governance  
58  
59 codes call for independent outside (non-executive) directors to play a vital role.  
60

1  
2  
3 Independence is precisely defined to ensure that these directors have no interest in the  
4 company that might, or might be seen, to adversely affect genuine independent  
5  
6 objective judgement. The number or percentage of independent board members on the  
7  
8 board is often specified. Audit, remuneration and nomination committees of the board  
9  
10 must be mainly or wholly comprised of independent, outside directors. But that leads  
11  
12 to the third paradox.  
13  
14  
15

### 16 17 **The independence paradox.**

18  
19 The definition of independence in most corporate governance codes is  
20  
21 exhaustive. To be considered independent a director must have no relationship with  
22  
23 any firm in the up-stream or down-stream added-value chain, must not have  
24  
25 previously been an employee of the company, nor be a nominee for a shareholder or  
26  
27 supplier of finance to the company. Indeed, the definition of independence is so strict  
28  
29 that an independent director who has served on the board for a long period is often  
30  
31 assumed to have become close to the company and is no longer independent.  
32  
33  
34  
35

36  
37 Herein lays the independence paradox. The more independent a director is, the  
38  
39 less he or she probably knows about the company or its industry. The more non-  
40  
41 executive, outside directors know about a company's business, organization,  
42  
43 strategies, markets, competitors, and technologies, the less independent they become.  
44  
45 Yet such people are exactly what top management needs to contribute to its strategy,  
46  
47 policy making and enterprise risk assessment.  
48  
49

50  
51 A commission appointed by the New York Stock Exchange (NYSE) recently  
52  
53 reflected this concern in ten core principles of corporate governance<sup>xiii</sup>. Whilst the  
54  
55 Commission supported the NYSE's listing requirements, which call for a majority of  
56  
57 independent directors, it also pointed out that companies can have additional non-  
58  
59 independent directors so that there is an appropriate range and mix of expertise,  
60

1  
2  
3 diversity and knowledge. The Commission argued that while independence is an  
4 important attribute for board members, the NYSE's Listing Standards do not limit a  
5 board to just one non-independent director and boards should seek an appropriate  
6 balance between independent and non-independent directors.  
7  
8  
9

10  
11 Similar questions can be raised about an independent chairman of the board. Most  
12 corporate governance codes call for a separation between chairman and chief  
13 executive. Even in the United States, where the roles have traditionally been  
14 combined in a single powerful figure, there have been calls for them to be separated.  
15  
16  
17  
18  
19  
20  
21

### 22 **Re-inventing the limited liability company – changing the balance of power**

23  
24 Previous suggestions for changing the balance of power over companies  
25 include Dallas (1997) who proposed dual boards and a board ombudsperson, Turnbull  
26 (2000) who made a case for compound boards, and Hatherly (1995) who called for  
27 shareholder panels. Other proposals to legitimize shareholder control include Guthrie  
28 and Turnbull (1995) and Turnbull (2002) who proposed corporate senates and  
29 stakeholders councils. The Australian Parliament considered similar proposals for  
30 corporate governance boards for IPOs (Murray, 1998). Brazilian fiscal councils,  
31 mentioned earlier, can also give shareholders more power over their company.  
32  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42

43 This paper focuses on the governance of listed limited-liability companies.  
44 The taxonomy, proposed above, would differentiate between ownership types and  
45 thus identify the ability to exercise power; for example distinguishing between  
46 widely-held companies with no dominant holders, listed companies in a chain  
47 dominated by other owners, and state chartered companies with a minority of voting  
48 shares listed. An alternative governance model would also need to satisfy both legal  
49 requirements and cultural expectations of the states in which it operates.  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 What might the listed limited-liability company look like if it was re-invented  
4  
5 to reflect contemporary reality? In formulating an alternative, three parties need to be  
6  
7 recognized: investors in the entity, executive management of the enterprise, and all  
8  
9 added-value stakeholders, including employees, those in the up and downstream  
10  
11 added-value chains, and the suppliers of debt finance.  
12  
13

14  
15 The following framework (figure 3) has been designed to reflect the legitimate  
16  
17 interests of these three groups. The interests of the wider publics who might be  
18  
19 affected by corporate activities, such as local communities, provincial interests or  
20  
21 federal state concerns have been excluded from the re-invented governance model, on  
22  
23 the grounds that their interests might more properly be reflected in other legislation.  
24  
25  
26  
27  
28

29  
30 Figure 3 about here  
31  
32  
33

34 In describing the new framework, labels such as ‘board of directors’,  
35  
36 ‘supervisory board’, or ‘committee’ have been avoided because they come heavily  
37  
38 laden with pre-conceptions and prejudices. Instead, the proposed framework adopts  
39  
40 alternative names – Governing Body, Executive Management, and Stakeholder  
41  
42 Liaison Groups - for the governance structures designed to meet the interests of the  
43  
44 three legitimate interest groups.  
45  
46

47  
48 The role of the *Governing Body* is to ensure that shareholder interests are represented  
49  
50 and met. This is an investor board with its members nominated and elected by the  
51  
52 shareholders. It would provide a forum for all classes of voting member in the  
53  
54 company. In a widely-held listed company the institutional investors would probably  
55  
56 play a significant role. In a dominated listed company the dominant interests would  
57  
58 take the lead but ensure that minority interests were protected. In a family company  
59  
60

1  
2  
3 the family shareholders, probably advised by a family council, would take the lead but  
4  
5 again protecting minorities. Members of Governing Bodies would probably include  
6  
7 those with previous experience as independent outside, non-executive directors, and a  
8  
9 new professional cadre of professional Governing Body members could evolve.  
10  
11

12  
13 Investors in listed companies can be categorized between long-term owners  
14  
15 and those interested mainly in short-term profits, whom some would call speculators.  
16  
17 If long-term investors behave like owners, they would look to the company's long-  
18  
19 term success, not short-term share price movements. It seems reasonable for different  
20  
21 rules to apply to each type, with the right to elect to the governing body being  
22  
23 restricted to long-term investors. Institutional investors, including insurance  
24  
25 companies, pension funds, hedge funds, and in some cases sovereign funds, can adopt  
26  
27 either investment strategy.  
28  
29

30  
31 The Governing Body would have the power to appoint and approve the rewards of the  
32  
33 chief executive, approve top management remuneration, receive reports from the  
34  
35 auditors, approve strategies and policies, and ensure subsequent conformance,  
36  
37 confirm that risk management and other control systems function, approve financial  
38  
39 policies, fund raising, and dividend policy, and seek independent advice.  
40  
41  
42

43  
44 In fulfilling this role, the Governing Body would take on the roles of the  
45  
46 present audit, nomination, and remuneration committees of the unitary board.  
47  
48 Separating the responsibilities of the Executive Management from those of the  
49  
50 Governing Body overcomes the independence and performance/conformance  
51  
52 paradoxes discussed above.  
53  
54

55  
56 Critics of this structure might argue that these proposals introduce the  
57  
58 Continental European two-tier board. Not so. There are no employee members, no  
59  
60

1  
2  
3 German codetermination, and no Dutch socially responsible members. Shareholder  
4  
5 power would be restored to the owners.  
6  
7

8 The *Executive Management* is the top management group of the organization,  
9  
10 the executives in the top management team. The chief executive and other senior  
11  
12 officers would be appointed much as they are now, with the Governing Body acting as  
13  
14 a nominating committee, possibly with ratification by the shareholders' meeting. The  
15  
16 Executive Management would have no independent outside members and could be  
17  
18 supplemented by external, non-executive members to provide additional experience,  
19  
20 relevant knowledge and business support. They would not need to be independent in  
21  
22 the conventional sense.  
23  
24  
25

26  
27 The role of the Executive Management would be to run the enterprise,  
28  
29 developing its strategies, creating its policies, and achieving the aims and performance  
30  
31 goals agreed by the Governing Body. Non-executive members of the Executive  
32  
33 Management would provide the deliberations and decisions of the Executive  
34  
35 Management with valuable information and insights, based on their relevant  
36  
37 knowledge of the business, the industry, and its markets. These non-executive  
38  
39 members would bring an independence of mind, but not the independence of  
40  
41 ignorance, thus overcoming the independence paradox discussed above.  
42  
43  
44

45  
46 In essence, the Executive Management would consist of the chief executive  
47  
48 and the top executives plus informed non-executive members to supplement their  
49  
50 work. Many boards of directors today are, in effect, self-appointed, self-rewarding and  
51  
52 self-perpetuating elites. Separating the roles of the Executive Management from those  
53  
54 of the Governing Body would avoid such situations.  
55  
56

57  
58 *Stakeholder Liaison Groups* are the third element in the proposed new  
59  
60 corporate governance framework. Increasingly, corporate stakeholders, including

1  
2  
3 employees, customers, corporate entities in the up and down-stream added-value  
4  
5 chains, and suppliers of debt finance, are seen as inherently part of corporate  
6  
7 governance responsibility. Sound corporate governance recognizes their legitimate,  
8  
9 long-term interests in their relations with the company. Stakeholder Liaison Groups  
10  
11 would work with both the Executive Management and the Governing Body providing  
12  
13 three-way communication on matters of mutual interest. These groups would have  
14  
15 advisory responsibilities with no executive powers to determine company affairs  
16  
17 beyond those provided by law.  
18  
19  
20  
21

22 Stakeholder Liaison Groups would be formed to represent the interests of  
23  
24 appropriate stakeholder groups. The liaison group to represent employee interests  
25  
26 would assume the role of the works council in some companies. Clearly, the principle  
27  
28 of Stakeholder Liaison Groups, as with the other proposals, would need to be reflected  
29  
30 in legislation, created by companies' charters or articles of association, and initially  
31  
32 formed by the company promoters.  
33  
34  
35

### 36 **Re-inventing the role of auditors**

37  
38 As we have seen, in the original 19th century model of the limited-liability  
39  
40 company the state permitted incorporation of limited-liability entities provided  
41  
42 safeguards were met to protect society. Auditors, appointed from amongst the  
43  
44 shareholders, reported to them that the directors of their company had faithfully  
45  
46 recorded the company's financial situation and demonstrated their stewardship over its  
47  
48 assets.  
49  
50  
51

52 Then the accounting profession emerged. Small audit firms at first but, as  
53  
54 companies grew in scale and complexity, they grew larger. Changes to partnership  
55  
56 law and mergers enabled them to grow further. By the end of the twentieth century the  
57  
58 world's major listed companies were audited by just five vast, international accounting  
59  
60

1  
2  
3 firms, which became four on the collapse of Arthur Andersen, following their  
4  
5 involvement in the Enron debacle.  
6  
7

8           These accounting firms are major businesses, offering products and solutions,  
9  
10 with partners judged by fee generation, growth and profit performance. Serious  
11  
12 questions have to be asked about the auditors' position. Who are their real clients: the  
13  
14 directors or the shareholders? The *de jure* response that the client is the company and  
15  
16 that somehow this means the body of shareholders will no longer wash. The *de facto*  
17  
18 reality is that the client is the board, backed up by the board's audit sub-committee. Is  
19  
20 this satisfactory? What are the alternatives?  
21  
22  
23

24           Some have suggested splitting the big firms, or opening the market for audit,  
25  
26 with second tier firms playing an increasing role in the audit of major listed  
27  
28 companies. But financial markets like the assurance they believe they get from an  
29  
30 audit opinion signed by one of the big four firms. Others have proposed further rules  
31  
32 to regulate auditors' activities, like the US Sarbanes Oxley Act (SOX), for example.  
33  
34 But SOX has proved more expensive and less effective than expected, as seen in the  
35  
36 subsequent collapse and bail-out of financial institutions and some other companies.  
37  
38  
39

40           The proposal in this paper is that auditors are appointed by and report to the  
41  
42 regulators as well as the Governing Body. It is the state that permits companies to  
43  
44 incorporate, and the state that is responsible for protecting the interests of investors,  
45  
46 creditors and other stakeholders. The regulatory organizational structures already exist  
47  
48 to manage such a relationship. The regulators, liaising with the Governing Body and  
49  
50 shareholders in general meeting, would appoint, re-appoint or if necessary replace the  
51  
52 auditors, agree their fees and receive their reports. The company would, as now, bear  
53  
54 the costs.  
55  
56  
57

In this way close relationships between directors and auditors would be avoided. If auditors reported to the regulator rather than the directors, a new mind set would be needed. Moreover, shareholders would have a direct line to their auditors.

### **Conclusions**

The 19<sup>th</sup> century concept of the limited-liability company was simple and successful. But the growing diversity of corporate objectives, confused ownership structures, and complex corporate groups led to abuses. Society originally demanded strict controls and bounded objectives for the right to incorporate companies in which shareholder liability was limited. Faced with growing societal dissatisfaction with corporate behaviour, this paper calls for a re-invention of the rationale, purpose and governance of the listed limited-liability company.

Methodologically, this paper looks at corporate governance from an unconventional perspective, taking an evolutionary view and tracing the development of corporate governance thinking and practice over time and around the world. The key theoretical stance is that culturally-determined ideas are transmitted from person to person, society to society, and that theory can be developed from an understanding of how situations come to be constituted, reproduced and adapted.

A call was made for a taxonomy of corporate types to differentiate the many different corporate governance power structures that now exist. An embryonic list was suggested, but scholars from a variety of disciplines, including law, financial economics, and management need to contribute to the identification of the characteristics that distinguish corporate types by ownership category and to the development of a relevant scheme of classification that can be reflected in corporate governance law, regulation and practice.

1  
2  
3 The paper also highlighted three unresolved dilemmas in corporate governance  
4 orthodoxy: whether governance should be by principles or rules, the potential  
5  
6 ignorance of the business if outside directors are independent of the company, and the  
7  
8 inherent conflict in a unitary board's dual responsibility for both performance and  
9  
10 conformance.  
11  
12

13  
14  
15 The paper proposed an alternative governance paradigm for corporate entities,  
16  
17 with a tri-partite balance of authority, power and responsibility between the  
18  
19 Governing Body, the Executive Management, and Stakeholder Liaison Groups. It was  
20  
21 further suggested that external auditors should report to the regulators as well as to the  
22  
23 Governing Body. The roles and responsibilities of directors, executives, stakeholders  
24  
25 and external auditors would be more clearly articulated, transparent and accountable.  
26  
27 Such a re-invention of the limited-liability company would shift power over  
28  
29 companies back towards their owners.  
30  
31  
32

33  
34 Further research, review and discussion are obviously essential, which would  
35  
36 undoubtedly generate further ideas. A few avant-garde companies might develop and  
37  
38 experiment with these ideas. But resistance to such changes would almost certainly  
39  
40 be widespread, because the existing power-base would be changed. Moreover,  
41  
42 unilateral action by any one jurisdiction could drive business (and the associated  
43  
44 employment, economic contribution and tax base) to other less well-regulated  
45  
46 jurisdictions. Ultimately international agreement and legislation would be needed.  
47  
48  
49

50  
51 These are radical proposals, too radical some will argue. The corporate world  
52  
53 would never accept them. However, the debates in the British Parliament in the mid-  
54  
55 nineteenth century show that not everyone was happy then with the original idea of  
56  
57 limiting shareholders' liability for the debts of their companies. In fact, that is a lever  
58  
59 that society still holds. Limited liability is a privilege granted by society, not an  
60

1  
2  
3 automatic legal right. Limiting companies' liability for the debts they incur involves a  
4 contract with society. If companies breach that contract they could lose the protection  
5 of that contract. What society grants through its legislators, society can take away if it  
6 is not satisfied with the way companies are managed or governed. Unless companies  
7 meet societies' expectations, investors should become liable for their companies'  
8 debts. The essential argument is that if society is not satisfied with the way companies  
9 are run, society has the solution in its own hands – agreeing or refusing to limit the  
10 liability of shareholders for their companies' debts.
