

5 Years of PARASOL Products: Aerosols

5-Year Seasonal Aerosol Optical Depth Average over Ocean

- 1st row: Total Aerosol Optical Depth (AOD) at 550 nm
- 2nd row: Fine Mode AOD (resulting from particles within the accumulation mode)
- 3rd row: AOD resulting from non-spherical particles within the coarse mode
- 4th row: AOD resulting from spherical particles within the coarse mode

5-Year Global Seasonal Fine Mode Aerosol Optical Depth & Yearly Anomalies

(Fine Mode AOD resulting from particles within the accumulation mode)
 blue indicates seasonal values lower than the long-term average, while red indicates values higher than average
