## Problem C

### Search by template

Input File: C.IN

Output File: standard output

Program Source File: C.C, C.CPP, C.JAVA

The pattern  $P$  and the text  $T$  are given. They contain the letters of the Latin alphabet (lowercase and uppercase). The pattern may also contain the characters '?', '[', ']', '{' and '}'. You must find all the positions where  $P$  appears in  $T$ .

Each position in the pattern  $P$  may contain:

- a letter from the Latin alphabet ('a' - 'z', 'A' - 'Z')
- the character '?' that can replace any letter (on its place can be any letter)
- brackets '[' ... ']', between them there is the set of letters that may be in the current position
- brackets '{' ... '}', between them there is the set of letters that are not allowed to be in the current position
- the letters can be repeated in brackets like [asssa] or {kLLf}.

For example, if the pattern  $P$  is A? [bcCc] {De}, then the first letter of a match must be A, the second can be any Latin letter, the third - letter b, c or C, and the fourth can be any Latin letter except D or e.

**Input.** The first line contains the number of test cases  $n$ . Each test consists of two lines. The first line contains the pattern  $P$  with no more than 100 characters and 60 positions. The second line contains the text with no more than  $10^6$  letters.

**Output.** For each test case print on a separate line all text positions where the pattern matches, in ascending order (the first letter from the text  $T$  is assumed to have the position '1'). If the pattern  $P$  does not appear in text  $T$ , print the message "no match". There must be a single space between each printed position, and no extra space at the beginning/end of line.

Sample input	Sample output
3 A? [bcCc] {De} yAqCpsApbeAocqq ??? [QWERTY] aSdFrQererRTY {eRT}? eRTeRTq	2 11 3 8 9 10 no match
