HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Erratum to: Neonicotinoid insecticides translocated in guttated droplets of seed-treated maize and wheat: a threat to honey bees?

2. MATERIALS AND METHODS

2.2 Plant material

2.2.1 *Triticale experiments*

The submitted specifications of the insecticide Gasur and the fungicide Efa of the treated seed in triticale have to be reduced by the factor 100 (which corresponds to the recommended application rate):

Seeds of triticale were treated with a combination of the insecticide Gasur[®] (per

seed: 0.0175 mg imidacloprid, Bayer CropScience AG, Leverkusen, Germany) and the fungicide Efa[®] (per seed: 0.0006 mg triazoxide, 0.000225 mg tebuconazole, 0.00225 mg fluoxastrobin, 0.0015 mg prothioconazole; Bayer CropScience AG, Leverkusen, Germany).

This error has no influence on results and discussion, respectively, because the results (i.e. concentration of pesticides in guttation drops) are not correlated with the application rate.
