HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Zita2010's melancholy and the "low resolution" artists

Nicolas Thély Université de Rennes 2 (firstname.name@univ-rennes2.fr)

My study is in the line with Aesthetic. Its objects is the study of the impact o media in the process of aethtetic creativity and developpement of sensitivity. In France, social sciences are state-of-the art in that field. Aesthetic, a human science, experiences more difficulties. Although, it is legally the best placed to mention taste and setting up of narrative and experimentation issues.

That's what i tried to do, in between 1998 and 2002 with my first big research about studing closed circuit devices. I precisely focused about webcam praticises by amateur practicises.

I didn't want to put into perspective artistic practises in order to justifie amateur practicise. I did observe differents means of acting. I focused on one figure who has created a particular language: Corrie from website Camathome. I also studied aesthetic conditions of reception. I spoke about « boredom aestetic » to discribe that 'internet web privaci'. I was refering to Marcel Duchamp who used to say: « hapenning introduced in art something wich nobody had put: boredom. Doing one thing while people get borred watching it, i had never thought that. It's a shame because this is a very nice idea. »

Since 2004, i am interrested into mobile images. Those wich are on the Internet but those cinematographic, on TV or amateur wich go from movie theatre to homes and on screens of mobile objects. In France, there is either contreversy nor debate on that change of works'statuts, on the issue of images and sounds'quality. What happening to still photographie or the work on the lence when one movie is digitilazed in low resolution? I can remember in the 70' and 80', the important aesthetic contreversy on the issue of having movies on television. At the end of the 80', the famous movie critic Serge Daney annoyed by some critics and movie maker'contempt. Serge Daney decided to give a daily chronicle in the french newspaper Liberation. Named « some movies on tv », that chronicle delt with explaining the change in the status of perception of movies broadcasted on tv. He liked to « venture into describing it »: « In short, one has to experience it, that's is to say, generations to come will discover cinema through its loss ». One period was over, and one has to thyink about the changing to another, the cohesion of two periods of time.

Thus next question is: in a context of digitalised datas, a streaming intense and excessive of images and sounds, witch sensitivity is at work? What about this still new sensitivity appearing in young generations entering in a world where datas are shared, apparently free, downloadable, copiable... With out any conscious that this world is only in fact accessible by paying an entrance and exit right.

One uses generally this expression Low resolution (in french basse défibition) to discribe the quality of images coming from the technic of data compression. That is to say it suppress some datas in order to lihten the size of a file in order to easy its circulation on the network or its saving on cd, dvd, or ipod.

JPEG, MPEG et MP3 are then algorythmic acronym now far from beeing barbarian words for digital devices'users. If one requalifie in aesthetic words this particular sensitivity (soft sensitivity) belonging to the web network. One can't strictly give a technical definition to low resolution. Because this expression means datas circulation (texts, images, sounds), its

production, its distribution, an its reception. Low resolution defines a single way of perceving the world. It asks the question of the perception, and the making of datas anabled by using more or less sophisticated materials, more ou less home made, mainly belonging to audiovisual and datas processing goods.

Zita 2010

Zita two thousand and ten is 18 years old. She lives in the south of France, in Montpellier. She as finished high school. Between 2005 and 2007, she had a Skyblog (from french radio Skyrock). Since one year, she has prisisely moved to My Space.

Zita's blog is significant of these young generations which are becomming liberated on the network and which handled MP3 files, jpeg pictures, animated Gif, and DIVX format's movies. Zita has developed her sensitivity in dealing low defibition cultural object. Her actions and her practices show an utopie at stake in her room: nodal point in between ordinary life, actions, the practices in writting personnal tex, making pictures, is the room.

Sociologists talk about flat culture to point out the company of cultural objects (music, book or film) in home places, at home. Zita handles cultural goods, yet also medias, appliances which gets her involved in autobiographic or narcissitic behaviours. Of course her cultural space is colonized by the ideology of media industries, yet as an answer she transforms it: she infiltrates in formats, text format, musical format, videographic format (Lipsync), and makes them explode through her inner emotions producing her own language.

What kind of secret utopias is plotted in these forms? Zita believes, she loves and she hopes. One is very far from usual amateur practices: some words unveil sensitivities just above the water, building themselves, feeling the world as it is, or as it represents itself in relationships, in media. Sensory talks, very reactive to the world. Some forms are produced by emotions, neither by the temptation of copying, imitating.

In Zita's blog, the overloaded pages, the highlighted words, colored writings, more or less blurred pictures, personal videos, are just like emergences. Theur are the hyper sensitive area, « media sensitive » of her personality. Zita is a colorist, a « stabiloworking girl » . She insists on words, on sensations.

Yet what sounds important to me, and what i can hold, is that these generations are emancipated themselves from highly standardized expression formats such as blogs, the website Myspace. Indeed, in a blog, everything is normed, ruled, pre-established. Skyblog forces you to conciseness, to obey an implicit logic. That's young Zita2010's case.

Question: which value should we give these thousands of datas put on the network? Can we archive them? Should they survive their authors? I m thinking about Brewster Khalle's firm: Archive.org. This big amazing company has recorded yet around 55 billions pages. Yet when one consults the websites, these pages are lacking words, images, datas...

In a last letter Zita posted on her blog 20th july 2007, before moving to Myspace: « and it reminds me a lot of things skyblog 120 articles yet i think i ll never erase it... Skyblog will take it over from me...yet i would like to print all my stories to get souvenirs » she does seem somehow sensitive to any loss of datas, yet shows some detachment.

This is a significant character trait in the generations born since the mid 80s. Caracterized by some detachment from physical support on digital ones.

Then let's ask the question: what will survive in several years from all these exchanges on the network, from these datas copiously send to servers consulted or not, sometimes duplicated to infinity but fast forgotten, bandonned? During a short period of time, it made Zita sad. Yet since that time she's started a other digital life on the net, on Myspace. She

produces less information. She contents herself with changing music, introduction texts, interests. Just as if she gets used that her texts are not memorable. As if they are not taking part anymore in her identity construction. She sadly sums up her interests in nice and pathetic lists:

« Who am I: im working 35 hours to get some mojitos at the diner, i m very nice unless my bad reputation, i hope i ll have a successfull and happy life »

My interests: drink some Martini, have fun, drink some rosé, eat some dakatine and feel guilty, my pay check, get laid, get ready, be unaware, have fun »

Low resolution artists

In this low definition context, what's the place of art? What's the artist's function? What kind of forms should they produce?

Digital prints on kleenex or Post-it, drawing with an oily chalk on a Velleda slate, Patafix sculptures enriched with sequins, graffitis with a Karcher, felt-pen drawing an a punched A4 paper: pieces of art realised by Clôde Coulpier, Fanette Muxart, Fabrice Croux, Camille Laurelli et David Lefebvre contrasted with the usual corpus of works one sees in the digital arts. Nevertheless they belong to them, just like thiose, some years ago, of Serge Comte, Raphaël Boccanfuso, Pierre Giner, Ludovic Burel, Delphine Coindet, Rainer Lericolais.

Yet, unlike their elders whose artistic pratices « take their origins » in the use of computers, these young artistswere born with the Internet which rapidly became they playground: Clode Coulpier practices blind surfing from blog to blog, ending up most of the time on pornographic websites; F M thinks of her drifts on the net as means to desire things, without possessing or living it; D L collects images depending on his excitment, pictures that he will later on reproduce on paintings. FC through Altavista and Google gets fed of cliches and stereotypes juggling ith key-words; CL thinks her productions as necessarily declining, and doesn't want to set any particular size to her images.

All their productions, very heterogeneous, are the symbol of a low resolution culture. Is the LDef culture a falsely durable—culture, that of the programmed obsolescence, in which algorithmes (jpeg, mpeg, mp3, page rank) have literally structured the sensory environnement and the creative power of young artists. The time for them to control, to reveal, to master the flux of images and information has gone. On the contrary, they are trying their best to propose esthaetic experiences as undeterminate as inventive. They produce shifty forms, volatile and temporary they name « weak forms ».

Then they multu-iply the-ir identity, kind of masked, and hiding behing groups such as Grüu, Renegade, The Kung-Fu Cow-boys, Super Polar, Antro, and Dj Casquette: so many identities which supply the catalog of their real-false musical label *Dick Head Man Records*, on the site of which you can get the whole bunch of their videos. By investing standardized formats, social networks (My spoace, Hi5, You tube) as well as art centers ans musical scenes, these young artists proclaim the power to create on their own their conditions of their appareances. They don't care much about their institutional visibility and their position in the art world ecosystem, just like it was not their business. They participate to undefined projects which they wont' be able to capitalize. So it seems that they implicitly express the criticism of a normative system whose vacuity they aimed at.

« Internet is a medium which enables us to make effective what is fictional ». Explains CC. By puting in place a creative peculiar system they themselves name «imaginary residencies », this artists little company has quickly built a network friendly and relational spreading on the internet network, and also on different mainlands. Naming it « fictional », ione has o understand artists' residencies with no real legal frame, nor associative status and foreign to any artistic institutions. To dat, six exist. Résidence Minimum Exemplaire in Clamecy (France); The Ghost residence in Tapeï; La résidence interdite in Shangaï; Résidence silence in Islande (Sauðarkrókur); Le Popo institute in Strasbourg; and Biosphère in Grenoble. These residencies, investing home places, with no necessary result, and artists are free to debrief or not their creation on the interneet or in an exhibition place. CC says « we realized that we can produce an energy in the work, without having to answer for it. That watching Tv is still working. We realized that our production is abounding, an unexpected energy, entirely detached from any context or evaluation process. We self recognized ourselves. » At the end of a first working cession in Clamecy residency, they send their production to friends, to relatives, yet also to the Tate. All their works mentionned that their had been realized within the frame work of Minimum Exemplaire Residency. « What happens in that kind of places, is actually the setting up of some conception of work; one doesn't do a lot, yet one does it fine. »

As a conclusion

Low resolution is n't only a simple variation in formats one could simply imagine. It also represents a sensitivity i progress, a flexible perception of culture. In this new information economy, all cultural practices may be reduced and made attractiveas valuabvle sources for digitalized contents. Artists temporarily fix their appareances and their ideas on various supports and formats, according to circumstances or their urge to act or to stop acting...
