**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

The Dual Beam spectropluviometer (DBS) measures the equivalent diameter, the fall velocity and the time of arrival of raindrops. Its main advantage over previous optical disdrometers is its ability to capture the whole measurement range of atmospheric precipitating particles (down to 0.1 mm raindrops).

Delahaye et al., A dual beam spectropluviometer concept, Journal of Hydrology, 2006.

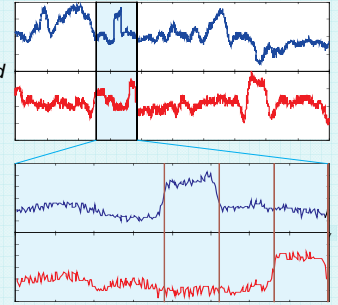

## TECHNICAL CHOICES

MEASUREMENT GOALS	METHODS USED
<b>DIAMETER</b> Down to 0.1 mm	<ul style="list-style-type: none"> <li>2 thin (2 mm) and closely spaced (2 mm) flat beams (L x l = 250 x 40 mm) at <math>\lambda=0.8\mu\text{m}</math>.</li> <li>16-bit digitization oversampled at 40 kHz and averaged to 10 kHz for noise reduction.</li> <li>Software :                         <ul style="list-style-type: none"> <li>- slope detection</li> <li>- baseline = averages before and after slope change</li> <li>- correction for drops larger than beam thickness</li> <li>- likelihood test by comparing 2 channels</li> </ul> </li> <li>Quality flag for small diameters.</li> </ul>
<b>FALL VELOCITY</b> Optimized	<ul style="list-style-type: none"> <li>Averaging of <math>\Delta t_1</math> and <math>\Delta t_2</math> (see diagram above).</li> <li>Interpolation for high velocities.</li> </ul>
<b>TIME STAMPING OF DROPS</b> 1 millisecond	<ul style="list-style-type: none"> <li>Clocking: sensor's sampling frequency used between PC times inserted at beginning and end of files.</li> </ul>
<b>ERROR REDUCTION</b> <ul style="list-style-type: none"> <li>Sunlight</li> <li>Water on internal glass windows</li> <li>Dripping water drops</li> <li>Wind sensitivity</li> <li>External splash on sensor body</li> <li>Internal splash</li> <li>Condensation</li> </ul>	<ul style="list-style-type: none"> <li>Sunlight rejection filter.</li> <li>Air circulation pump.</li> <li>Water draining slots above windows.</li> <li>Very rigid cast iron support ring.</li> <li>Anti-splash circular ribs and scouring rolls.</li> <li>Internal vanes.</li> <li>Heated electronics and Moisture absorbers.</li> </ul>
<b>ERROR DETECTION</b> <ul style="list-style-type: none"> <li>Self-test for monitoring baselines, synchronization, and window cleanness</li> </ul>	<ul style="list-style-type: none"> <li>Reciprocating 0.4 mm diameter rod within beam triggered daily or manually and motor driven. Induced signal variations recorded to self-test file.</li> </ul>

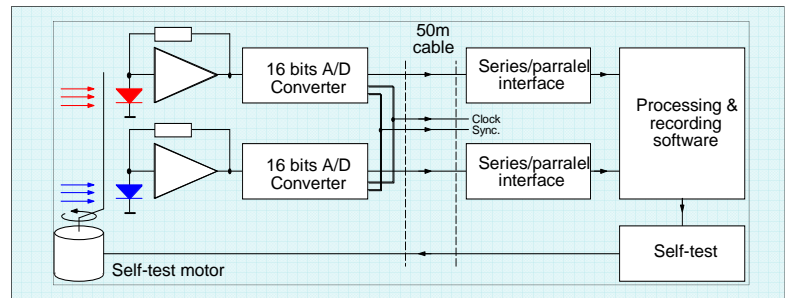

## PRINCIPLE

A rain drop falls through both, upper and lower, beams disrupting the optical signal. The processing algorithm allows the simultaneous detection of the drop diameter and fall velocity at precisely defined arrival time.

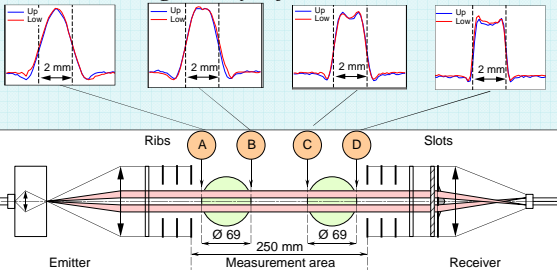

Outdoor measurement signals with a small isolated drop: 0.2mm and 0.89 m/s

## BLOC DIAGRAM

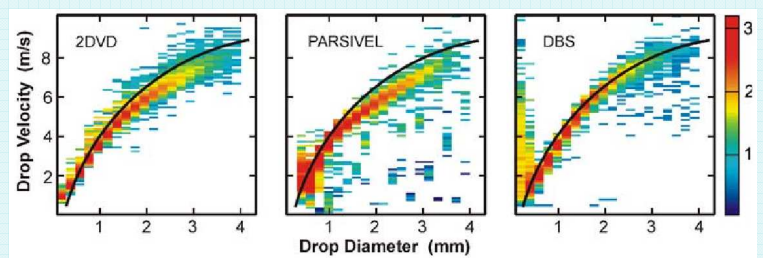

## TECHNICAL CHARACTERISTICS

### 2D homogeneity of beams and noise

## FIELD EVALUATION : (DEVEX experiment)

Successfully compared with other optical disdrometers.

Krajewski et al., DEVEX-disdrometer evaluation experiments : Basic results and implications for hydrologic studies, 2005, Advances in Water Resources.

## RELATED WORKS

### Continuous view of rain :

At the Latmos, various studies on the multifractal properties of rain are based on measurements of the DBS. De Montera et al., 2009 & 2010 Verrier et al., 2011 & 2013.

Power spectra of the time series collected from July 2008 to July 2009 at the Sirta. This picture displays the various scaling of the rain measurements

### Discrete view of rain :

Various studies allowed the modeling and the simulation of rainfall as a raindrop point process. Lavernat and Golé, 1998 et 2006.

The DBS also allowed some investigations on the DSD. Mallet and Barthès, 2009. Barthès and Mallet, 2013.

## Room for improvement and rejuvenating:

A 2014 IPSL funding is asked for in order to modernize the DBS (both hardware and software components).

The processing algorithm as well as the calibration process are under study to improve the quality of the measurements (and among others to reduce the noise for the small drops). Intercomparisons with other instruments at Sirta is in progress.
