Preface

This volume contains the papers presented at the 26th Annual WG 11.3 Conference on Data and Applications Security and Privacy (DBSec 2012). The conference, hosted for the first time in Paris, France, July 11–13, 2012, offered outstanding research contributions to the field of security and privacy in Internet-related applications, cloud computing and information systems.

In response to the call for papers, 49 papers were submitted to the conference. These papers were evaluated on the basis of their significance, novelty and technical quality. Each paper was reviewed by at least three members of the Program Committee. The Program Committee meeting was held electronically with intensive discussion over a period of one week. Of the papers submitted, 17 full papers and 6 short papers were accepted for presentation at the conference. The conference program also included two invited talks by Patrick McDaniel (Pennsylvania State University) and Leon van der Torre (University of Luxembourg).

Several trends in computer security have become prominent since the beginning of the new century and are considered in the program. These include the proliferation of intrusions that exploit new vulnerabilities, the emergence of new security threats against security and privacy, the need to adapt existing approaches and models to handle these threats and the necessity to design new security mechanisms for cloud computing infrastructure. Reflecting these trends, the conference includes sessions on security and privacy models, privacy-preserving technologies, secure data management, smart card, intrusion, malware, probabilistic attacks and cloud computing security.

The success of this conference was the result of the effort of many people. We would especially like to thank Joaquin Garcia-Alfaro (Publication Chair), Said Oulmakhzoune (Web Chair), Ghislaine Le Gall (Local Arrangements Chair) and Artur Hecker (Sponsor Chair). We also thank EADS/Cassidian and the Institut Mines Télécom for their financial support.

We gratefully acknowledge all authors who submitted papers for their efforts in continually enhancing the standards of this conference. It is also our pleasure to thank the members of the Program Committee and the external reviewers for their work and support.

Last but not least, thanks to all the attendees. We hope you will enjoy reading the proceedings.

Table of Contents

Invited Paper	
Logics for Security and Privacy	1
Access Control	
A User-to-User Relationship-Based Access Control Model for Online Social Networks	8
Yuan Cheng, Jaehong Park, and Ravi Sandhu	
Automated and Efficient Analysis of Role-Based Access Control with Attributes	25
Alessandro Armando and Silvio Ranise	
A Unified Attribute-Based Access Control Model Covering DAC, MAC and RBAC	41
Confidentiality and Privacy	
Signature-Based Inference-Usability Confinement for Relational Databases under Functional and Join Dependencies	56
Privacy Consensus in Anonymization Systems via Game Theory	74
Uniform Obfuscation for Location Privacy	90
Smart Cards Security (Short Papers)	
Security Vulnerabilities of User Authentication Scheme Using Smart Card	106
Secure Password-Based Remote User Authentication Scheme with Non-tamper Resistant Smart Cards	114

A Friendly Framework for Hidding fault enabled virus for Java Based Smartcard	122
Tiana Razafindralambo, Guillaume Bouffard, and Jean-Louis Lanet	
Privacy-Preserving Technologies	
Approximate Privacy-Preserving Data Mining on Vertically Partitioned Data	129
Security Limitations of Using Secret Sharing for Data Outsourcing Jonathan L. Dautrich and Chinya V. Ravishankar	145
Privacy-Preserving Subgraph Discovery	161
Data Management	
Decentralized Semantic Threat Graphs	177
Code Type Revealing Using Experiments Framework	193
From MDM to DB2: A Case Study of Security Enforcement Migration	207
Intrusion and Malware	
XSS-Dec: A Hybrid Solution to Mitigate Cross-Site Scripting Attacks Smitha Sundareswaran and Anna Cinzia Squicciarini	223
Randomizing Smartphone Malware Profiles against Statistical Mining Techniques	239
Probabilistic Attacks and Protection (Short Papers)	
Layered Security Architecture for Masquerade Attack Detection	255
k-Anonymity-Based Horizontal Fragmentation to Preserve Privacy in Data Outsourcing	263

Table of Contents	XIII
Reconstruction Attack through Classifier Analysis	274
Cloud Computing	
Distributed Data Federation without Disclosure of User Existence Takao Takenouchi, Takahiro Kawamura, and Akihiko Ohsuga	282
Improving Virtualization Security by Splitting Hypervisor into Smaller Components	298
Enforcing Subscription-Based Authorization Policies in Cloud Scenarios	314
Author Index	331
