Ouvrard D., Burckhardt D. & Cocquempot C. 2015. — An annotated checklist of the jumping plant-lice (Insecta: Hemiptera: Psylloidea) from the Mercantour National Park, with seven new records for France and one new synonymy, in Daugeron C., Deharveng L., Isaia M., Villemant C. & Judson M. (eds), Mercantour/Alpi Maritime All Taxa Biodiversity Inventory. *Zoosystema* 37 (1): 251-271. <http://dx.doi.org/10.5252/z2015n1a13>

ABSTRACT

A total of 68 psyllid species are listed from the Mercantour National Park in Southeast France, where a targeted collecting campaign was conducted between 2009 and 2012, as part of the project “ATBI+M” Mercantour. The insects were collected using Malaise traps, flight intercept traps and sweep nets to sample in the vegetation. Additional information on distribution, biology and host-plants is provided for each species. Seven species are recorded for the first time from France: *Craspedolepta artemisiae* (Foerster, 1848), *Craspedolepta nebulosa* (Zetterstedt, 1828), *Cacopsylla propinqua* (Schaefer, 1949), *Cyamophila probaskai* (Priesner, 1927), *Eryngiofaga* cf. *refuga* (Loginova, 1966), *Bactericera parastriola* Conci, Ossiannilsson & Tamanini, 1988 and *Trioza flixiana* Burckhardt & Lauterer, 2002. *Trioza* (*Trioza*) *rapisardai* Conci & Tamanini, 1984 is a new subjective synonym of *Trioza brachyceraea* Hodkinson & White, 1979, which was previously known only from the male holotype. The abundance, distribution and introduction status of some species are discussed.

new records.

RÉSUMÉ

Liste annotée des psylles (*Insecta: Hemiptera: Psylloidea*) du Parc national du Mercantour, incluant sept espèces nouvelles pour la France et une nouvelle synonymie.

Un total de 68 espèces de psylles est rapporté du Parc national du Mercantour dans le Sud-Est de la France, où a eu lieu une campagne ciblée de collecte entre 2009 et 2012, dans le cadre du projet “ATBI+M” Mercantour. Les insectes furent collectés à l’aide de pièges Malaise, de pièges d’interception et au filet fauchoir dans la végétation. Des données supplémentaires sur la distribution, la biologie et les plantes-hôtes sont fournies pour chaque espèce. Sept espèces sont nouvelles pour la France: *Craspedolepta artemisiae* (Foerster, 1848), *Craspedolepta nebulosa* (Zetterstedt, 1828), *Cacopsylla propinqua* (Schaefer, 1949), *Cyamophila probaskai* (Priesner, 1927), *Eryngiofaga cf. refuga* (Loginova, 1966), *Bactericera parastriola* Conci, Ossiannilsson & Tamanini, 1988 et *Trioza flixiana* Burckhardt & Lauterer, 2002. *Trioza* (*Trioza*) *rapisardai* Conci & Tamanini, 1984 est un nouveau synonyme de *Trioza brachyceraea* Hodkinson & White, 1979, connu jusqu’à présent de l’holotype mâle uniquement. L’abondance, la distribution et le statut d’espèce introduite sont aussi considérés pour quelques espèces.

MOTS CLÉS

Psylles,

faunistique,
plantes-hôtes,
France,
Alpes,
signalisations nouvelles.

INTRODUCTION

Psylloidea, or jumping plant-lice, are small sap-sucking insects with a world-wide distribution, found on a large variety of plants. Whereas the vast majority of the *c.* 3900 described species do not seem to have a major impact on their host-plant, a few are economically important pests on crops or ornamental trees.

From a historical point of view, the oldest citation of an adult psyllid and the first mention of a higher taxonomic rank (despite being from pre-Linnean times) for psyllids was made in France by the entomologist Réaumur in 1737, who observed *Homotoma ficus* (Linnaeus, 1758) and *Psylla buxi* (Linnaeus, 1758) in his garden near Paris (Charenton).

The Palaearctic fauna has been thoroughly studied for more than 250 years, and lists have been published for several countries or regional areas, but never for France. Seljak *et al.* (2008) consider the list of psyllids as nearly complete for Central Europe, but this is far from being true for Western Europe. However, a list of 169 species for France is available from the Fauna Europaea website (Burckhardt 2004), and has served as our reference list for the psyllids of France, with a few exceptions mentioned in the text. Full synonymies are not given here, since all taxonomic information can be found in the Psyl’list online database (Ouvrard 2014).

Nine psyllid species have been previously reported from the Alpes-Maritimes department in previous publications: *Camarotoscena speciosa* (Flor, 1861) in Cotte (1915), *Euphyllura olivina* (Costa, 1839) in Balachowsky & Mesnil (1935) and Peragallo (1881), *Livia juncei* (Schrank, 1789) and *Psylla alni* (Linnaeus, 1758) in Risso (1826), *Psyllopsis fraxini* (Linnaeus, 1758) in Béguinot (2002) and Cotte (1915), *Trichohermes walkeri* (Foerster, 1848), *Trioza centranthi* (Vallot, 1829) and *Trioza kiefferi* Giard, 1902 in Béguinot (2002) and *Trioza rumicis* Löw, 1880 in Cotte (1915).

With the exception of two species in the online ATBI database (<http://www.atbi.eu/mercantour-maritime/?q=node/481>), namely *Calophya rhois* (Löw, 1877) and *Trioza centranthi* (Vallot, 1829), no psyllids have been reported from the

Mercantour National Park before, and only *Livilla pyrenaica* (Mink, 1859) has been reported from the Alpi Marittime National Park (Conci & Tamanini 1988). The situation is different for the rest of the Alps, where many species are recorded from the Austrian (Wagner & Franz 1961), Swiss (Burckhardt 1983; Burckhardt *et al.* 2007: 47 species from a relatively small area in eastern Switzerland) and Italian (Tamanini 1977; Rapisarda & Conci 1989; Conci *et al.* 1993, 1996) parts.

The full list of collected and identified psyllids is given, together with collecting data, a report of the known distribution of each species and comments concerning the available descriptions and elements of the biology (including host-plants) of each species.

MATERIAL AND METHODS

From 8 June 2009 to 15 October 2010, 697 (288 males and 409 females) psyllid specimens were collected in 92 Malaise traps and 46 interception traps set up in different locations and at two different altitudes (around 1400 and 2000 m) in the Mercantour National Park (Deharveng *et al.* 2015), as part of the project “ATBI+M” Mercantour dedicated to the inventory and monitoring of the whole biodiversity in the area (more information available at: <http://www.atbi.eu/mercantour-maritime/>).

All samples collected during the “Terrestrial Invertebrates fieldwork module” of the ATBI Mercantour project were labelled using a coding system where “M” refers to Mercantour, “9” or “10” indicates the sampling year, “BOR”, “SES” or “CAI” the sampling area, “1400/1500 or 2000” the sampling altitude, T1 to T8 the sequence of the successive sampling periods, “M1 or M2” the Malaise traps and “IN” the interception traps. Detailed information on the trap locations and geographic coordinates, the sampling periods and the main vegetation present at the sampling sites are given in Table 1. The codes and corresponding dates of the successive sampling periods for each sampling site are given in Table 2.

TABLE 1. — Sample codes and general information on the location of the sampling sites (all in Alpes-Maritimes, 06), their main vegetation and the sampling period.

In addition, the third author (CC) has made several collecting trips to the Mercantour National Park (June 1994, 2 and 4 July 2008; 9, 13, 16-23 July 2009; 8-15 July 2011). A few specimens collected in 2012 by Jean-Claude Streito (INRA, Montpellier) are also reported, as well as specimens collected by Igor Malenovský (Moravian Museum, Brno, Czech Republic) between 1994 and 1996. All specimens were caught by sweeping low vegetation or beating branches of bushes and trees.

In addition to the reference list of Fauna Europaea, the present data have been cross-checked with the dataset of the “Inventaire National du Patrimoine Naturel” (INPN: <http://inpn.mnhn.fr/accueil/index>) for the completeness of data from France, and with both the GBIF portal (<http://data.gbif.org>) and the Psyl'list database (Ouvrard 2014) for the world-wide distribution.

The higher classification follows Burckhardt & Ouvrard (2012).

The Plant List (<http://www.theplantlist.org/>) has been used as the reference for the plant scientific names.

COMMENTS

Description in Hodkinson & Hollis (1987). Introduced and established in France, reported for the first time in 1976 (Bain *et al.* 1976). Native to Australia. Host-plants are species of *Acacia* and *Albizia* (Fabaceae). In France, it has been collected on *Acacia baileyana* F. Muell. Populations of *A. uncatoides* undergo 6 to 8 generations per year in Italy (Conci *et al.* 1996).

Subfamily PSYLLINAE Latreille, 1807

Cacopsylla notata (Flor, 1861)

Psylla notata Flor, 1861: 365.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-le-Selvage, M09-SES2000-T1-IN, 1♀ (MNHN); Alpes-Maritimes, Moulinet, Col de Turini, piste de Gasta-Fume, 1625 m, 43°58'27.1482"N-7°23'42.7374"E, 02.VII.2008, C. Cocquem-

pot (CBGP), 1 adult; Alpes-Maritimes, Moulinet, Col de Turini, 1610 m, 43°58'37.56"N-7°23'30.7782"E, 09.VII.2009, on herbaceous plants, C. Cocquempot (CBGP), 1 adult; Alpes-Maritimes, Saint-Dalmas-de-Tende, Refuge Neige et Merveilles, 1545 m, 44°4'12.0318"N-7°30'44.064"E, 16.VII.2009, C. Cocquempot (CBGP), 2 adults; Alpes-de-Haute-Provence, Entraunes, Piste de la Cascade de l'Aiglière, 1420 m, 44°12'24.9732"N-6°44'33.4782"E, 14.VII.2011, C. Cocquempot (CBGP), 1 adult; Alpes-Maritimes, Saint-Dalmas-de-Tende, Lac de Trem, 2270 m, 44°3'5.0472"N-7°26'36.8622"E, 18.VII.2009, C. Cocquempot (CBGP), 1 adult.

DISTRIBUTION. — Fauna Europaea: Bulgaria, France, Greece, Italy (mainland + Sardinia + Sicily); INPN: no data; additional data from Psyl'list: Iran, Turkey.

COMMENTS

Description in Burckhardt & Hodkinson (1986). Biology in Conci *et al.* (1993). Host-plants: several species of *Pyrus* (Rosaceae).

Cacopsylla picta (Foerster, 1848)

Psylla picta Foerster, 1848: 81.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saorge, M10-CAI1400-T5-M2, 1 ♂ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Belgium, Czech Republic, Finland, France, Germany, Italy, Moldova, Slovakia, Sweden, Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: Bulgaria, Great Britain, Slovenia.

COMMENTS

Description in Ossiannilsson (1992), as *Cacopsylla* (*Thamnopsylla*) *costalis* (Flor, 1861), and Burckhardt (2010). Biology in Ossiannilsson (1992). Host-plants: several species of *Malus* (Rosaceae).

Cacopsylla propinqua (Schaefer, 1949) (Fig. 1A)

Psylla propinqua Schaefer, 1949: 37.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-de-Tende, Lac de la Muta, 2365 m, 44°2'57.2742"N-7°26'5.694"E, 18.VII.2009, C. Cocquempot (CBGP), 1 adult.

DISTRIBUTION. — Fauna Europaea: Finland, Germany, Italy, Norway, Russia, Slovakia (doubtful), Sweden, Switzerland; INPN: no data; additional data from Psyl'list: no additional data.

COMMENTS

Description in Schaefer (1949) and Conci & Tamanini (1986a). Biology in Conci *et al.* (1993). Host-plants: several species of *Salix* (Salicaceae). New for France.

Cacopsylla pruni (Scopoli, 1763)

Chermes pruni Scopoli, 1763: 140.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saorge, M10-CAI1400-T1-M2, 1 ♂ (MNHN); same locality, M10-CAI1400-T2-M2, 1 ♂, 1 ♀ (BMNH); same locality, M10-CAI1400-T6-M2, 1 ♀ (MNHN); same locality, M10-CAI2000-T1-M1, 1 ♂ (MNHN); same locality, M10-CAI2000-T1-M2, 1 ♂ (MNHN); Alpes-Maritimes, Saint-Martin-Vésubie, M09-BOR1400-T1-M1, 1 ♀ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Belgium, Bulgaria, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Ireland, Italy, Moldova, Norway, Poland, Romania, Russia, Slovakia, Spain, Sweden, Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: Caucasus, Georgia, Hungary, Iran, Slovenia.

COMMENTS

One specimen is noteworthy in lacking the typical orange-brown forewing coloration. Description in Hodkinson & White (1979a), Ossiannilsson (1992) and Burckhardt (2010). Biology in Lauterer (1999; 2011). Host-plants: several *Prunus* species. This species is a vector of "*Candidatus* Phytoplasma prunorum responsible for the European Stone Fruit Yellows (Carraro *et al.* 1998). According to Peccoud *et al.* (2013), *C. pruni* is a complex of two cryptic species.

Cacopsylla pulchella (Löw, 1877)

Psylla pulchella Löw, 1877: 143.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Martin-Vésubie, M09-BOR1400-T2-M2, 1 ♂, 1 ♀ (BMNH); Alpes-Maritimes, Saint-Dalmas-le-Selvage, M09-SES1400-T8-M2, 1 ♀ (MNHN); M09-SES2000-T2-M2, 1 ♂ (MNHN); same locality, M09-SES2000-T8-M2, 1 ♀ (MNHN).

DISTRIBUTION. — Fauna Europaea: France, Germany, Great Britain, Greece, Italy (mainland + Sicily), Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: Hungary, Israel, Lebanon, Portugal (mainland + Azores), Serbia, Slovenia, Spain (mainland + Balearic Islands), Turkey.

COMMENTS

Description in Hodkinson & White (1979a) and Burckhardt (1999). Biology in Burckhardt (1999). Host-plant: *Cercis siliquastrum* L. (Fabaceae).

Cacopsylla pulchra (Zetterstedt, 1840)

Chermes pulchra Zetterstedt, 1840: 309.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Martin-Vésubie, M09-BOR1400-T2-M2, 1 ♂ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Ireland, Italy (mainland + Sardinia + Sicily), Moldova, Norway, Poland, Romania, Russia, Slovakia, Sweden, Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: Caucasus, Hungary, Japan, Slovenia.

COMMENTS

Description in Hodkinson & White (1979a) and Ossiannilsson (1992). Biology in Conci *et al.* (1993), Ossiannilsson

(1992) and Lauterer (1998). Host-plants: several species of *Salix* (Salicaceae).

Cacopsylla rhamnicola (Scott, 1876)

Psylla rhamnicola Scott, 1876: 548.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-le-Selve, M09-SES1400-T7-M2, 1♂ (MNHN); Alpes-Maritimes, Saorge, M10-CAI1400-T4-M2, 1♀ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Czech Republic, Denmark, Finland, France, Great Britain, Ireland, Italy (mainland), Moldova, Russia, Slovakia, Slovenia, Sweden, Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: Caucasus, Georgia, Hungary, Kazakhstan, Mongolia, Romania, Slovenia, Spain, Turkey.

COMMENTS

Description in Hodkinson & White (1979a), Conci & Tamanini (1988) and Ossiannilsson (1992). Biology in Ossiannilsson (1992) and Lauterer (1999). Host-plants: several species of *Rhamnus* (Rhamnaceae).

Cacopsylla rhododendri (Puton, 1871)

(Fig. 1B)

Psylla rhododendri Puton, 1871: 436.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Valdeblore, M09-BOR2000-T7-M1, 1♀ (MNHN); same locality, M09-BOR2000-T8-M2, 3♂ (MNHN); France. Alpes-Maritimes, Saorge, M10-CAI1400-T7-M2, 2♂ (BMNH); Alpes-Maritimes, Tende, Val de Minière, 1600 m, 10.VII.1994, 3♂, 1♀, I. Malenovský (MMBC); Alpes-Maritimes, Bolène-Vesubie, massif de la cime du Diable, 1800-2600 m, 28.VIII.1995, 9♂, 6♀, I. Malenovský (MMBC); Alpes-Maritimes, La Brigue, French-Italian border between Mt Grai (2013 m) and Cime de Marte (2135 m), 21.VIII.1996, 2♂, 1♀, I. Malenovský (MMBC).

DISTRIBUTION. — Fauna Europaea: Austria, Belgium, Finland, France, Italy, Moldova, Romania, Switzerland, Ukraine; INPN: no data; additional data from Psyl'list: "Czechoslovakia", Germany, Japan, Korea, Russia.

COMMENTS

Description in Dobreanu & Manolache (1962) and Ossiannilsson (1992). Biology in Ossiannilsson (1992) and Conci *et al.* (1993). Host-plants: several species of *Rhododendron* (Ericaceae).

Cacopsylla saliceti

(Foerster, 1848)

Psylla saliceti Foerster, 1848: 79.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Valdeblore, M09-BOR2000-T8-M2, 1♂ (MNHN); Alpes-Maritimes, Saint-Dalmas-le-Selve, M09-SES2000-T1-M2, 1♂ (BMNH); Alpes-

Maritimes, Breil-sur-Roya, Authion, vacherie de l'Ortiguier, 1960 m, 43°59'40.6284"N-7°26'1.0536"E, on *Larix decidua*, 20.VII.2009, C. Cocquempot (CBGP), 7 adults; Alpes-Maritimes, Lantosque, Piste du col du Fort, 1770 m, 44°0'43.9668"N-7°14'45.3546"E, 13.VII.2009, on *Larix decidua* Mill., C. Cocquempot (CBGP), 8 adults; Alpes-Maritimes, Lantosque, Col d'Andrion (Col du Fort), 1990 m, 44°1'3.8202"N-7°15'12.1206"E, 13.VII.2009, on *Larix decidua* Mill., C. Bactericera parastriola

Conci, Ossiannilsson & Tamanini, 1988

Bactericera parastriola Conci, Ossiannilsson & Tamanini, 1988: 226.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-le-Selvage, «Vallon de Restefond», alpine meadow, 2500 m, 16.VI.1994 (Malaise trap), C. Cocquempot (CBGP), 1♂.

DISTRIBUTION. — Fauna Europaea: Czech Republic, Italy, Romania, Sweden, Switzerland; INPN: no data; additional data from Psyl'list: Austria, Poland.

COMMENTS

Description in Conci *et al.* (1988) and Ossiannilsson (1992). Description of the fifth instar immature in Burckhardt & Lauterer (1997). Biology in Conci *et al.* (1988), Ossiannilsson (1992) and Lauterer & Malenovský (2002). Host-plants: several species of *Salix* (Salicaceae). New for France.

Genus *Eryngiofaga* Klimaszewski, 1968

Eryngiofaga cf. *refuga* (Loginova, 1966)

Trioza refuga Loginova, 1966: 28.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saorge, M10-CAI2000-T2-M2, 1♂ (MNHN).

DISTRIBUTION. — Fauna Europaea: No data; INPN: no data; additional data from Psyl'list: Kazakhstan, Russia (West Siberia).

COMMENTS

Description in Loginova (1966). No data on biology (reported from the subalpine region of Kazakhstan: 2000-2500 m). Host-plant unknown. New for France. The single male at hand resembles *Eryngiophaga refuga* from Kazakhstan and Siberia. However, more material is required to decide if the French population is conspecific with those from Kazakhstan and Siberia.

Malenovský (MMBC).

DISTRIBUTION. — Fauna Europaea: Austria, Czech Republic, Finland, France, Germany, Great Britain, Italy (mainland + Sicily), Norway, Poland, Russia, Slovakia, Spanish (mainland + Canary Is.), Sweden, Switzerland; INPN: no data; additional data from Psyl'list: Estonia, Korea, Latvia, Mongolia, Slovenia.

COMMENTS

Description in Hodkinson & White (1979a) and Ossiannilsson (1992). Biology in Ossiannilsson (1992) and Conci *et al.* (1996). Host-plants: several *Achillea* and *Chrysanthemum* spp. (Asteraceae).

Trioza anthrisci Burckhardt, 1986

Trioza anthrisci Burckhardt, 1986: 425.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Martin-Vésubie, M09-BOR1400-T2-M1, 2♂ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Czech Republic, Finland, France, Germany, Italy, Norway, Poland, Romania, Russia, Slovakia, Sweden, Switzerland; INPN: no data; additional data from Psyl'list: Slovenia, Turkey, Ukraine.

COMMENTS

Description in Burckhardt (1986). Biology in Conci *et al.* (1996). Host-plants: *Anthriscus sylvestris* (L.) Hoffm., *Angelica sylvestris* L., *Chaerophyllum hirsutum* subsp. *villarsii* (Koch) Brique and *Heracleum sphondylium* L. (Apiaceae).

Trioza brachyceraea

Hodkinson & White, 1979

(Fig. 1G)

Trioza brachyceraea Hodkinson & White, 1979: 61; holotype male, France: Lozère, Gorges du Tarn, 25.V.1977 – *Genista hispanica* (I. M. White), (BMNH, slide mounted, examined).

Trioza (Trioza) rapisardai Conci & Tamanini, 1984: 201; holotype male, Italy: Piedmont, Susa Valley, near Cesana Torinese, 1330-1550 m, 1.VII.1984, *Laserpitium siler* (C. Conci) (Museo Civico di Storia Naturale di Milano, dry mounted, not examined). N. syn.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Martin-Vésubie, M09-BOR1400-T7-M1, 1♀ (MNHN); Alpes-Maritimes, Saint-Dalmas-le-Selvage, M09-SES1400-T1-M2, 1♂, 3♀ (MNHN); same locality, M09-SES1400-T8-M2, 1♀ (MNHN); Alpes-Maritimes, Saorge, M10-CAI2000-T7-M1, 1♀ (BMNH).

DISTRIBUTION. — Fauna Europaea: France (report for *T. brachycerae* [sic]), Italy (report for *T. rapisardai*); INPN: no data; additional data from Psyllist: no additional data.

COMMENTS

Description in Hodkinson & White (1979b) and Conci & Tamanini (1984). Biology in Conci & Tamanini (1984) and Conci *et al.* (1996). Host-plant: *Laserpitium siler* L. and *Laserpitium gallicum* L. (Apiaceae). *Trioza brachycerae* has been known only from the holotype from France, while *T. rapisardai* was known from three places in the Susa Valley, Piedmont, in northern Italy. A comparison of the holotype of *T. brachycerae* with paratypes of *T. rapisardai* housed in the collections of the BMNH and MHNG showed that they are conspecific. We therefore consider *T. rapisardai* to be a junior subjective synonym of *T. brachycerae*.

Trioza caesaris

Burckhardt & Lauterer, 2002

Trioza caesaris Burckhardt & Lauterer, 2002: 22.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-le-Selvage, M09-SES2000-T8-M2, 1♂ (MNHN).

DISTRIBUTION. — Fauna Europaea: Austria, Czech Republic, France, Italy, Switzerland; INPN: observed in 1986 in Department of Haut-Rhin (data CardObs; square 10 kmL93E100N677); additional data from Psyllist: no additional data.

COMMENTS

Description and biology in Burckhardt & Lauterer (2002a). Host-plant: *Cardamine hirsuta* L. (Brassicaceae).

Trioza carpathica

Dobreanu & Manolache, 1959

Trioza apicalis carpathica Dobreanu & Manolache, 1959: 295.

MATERIAL EXAMINED. — France. Alpes-Maritimes, Saint-Dalmas-le-Selvage, M09-SES1400-T1-IN, 1♀ (MNHN).

DISTRIBUTION. — Fauna Europaea: France, Romania; INPN: no data; additional data from Psyllist: no additional data.

COMMENTS

Description in Dobreanu & Manolache (1959, 1962) and Burckhardt (1986). No data on biology. Host-plants: *Angelica archangelica* L. and *Daucus carota* L. (Apiaceae).

Trioza centranthi (Vallot, 1829)

Psylla centranthi Vallot, 1829: 106.

MATERIAL EXAMINED. — France. Alpes-de-Haute-Provence, Entraunes, Piste de la Cascade de l'Aiglière, 1420 m, 44°12'24.9732"N-6°44'33.4782"E, 14.VII.2011, on *Centranthus angustifolius* (Mill.) DC., *C. Cocquempot* (CBGP), 72 adults.

DISTRIBUTION. — Fauna Europaea: Austria, Belgium, Czech Republic, Denmark, France, Germany, Great Britain, Greece, Italy (mainland + Sardinia + Sicily), Malta, Moldova, Poland, Romania, Slovakia, Switzerland, Ukraine; INPN: observed in 2009 in Mercantour National Parc (data ATBI Mercantour; square 10 kmL93E106N633); additional data from Psyllist: Algeria, Caucasus, Hungary, Morocco, Slovenia, ex-Yugoslavia.

COMMENTS

COMMENTS

Description in Burckhardt & Lauterer (2006). No precise data available on biology, since this species was confused with *Trioza galii* Foerster, 1848 in all works preceding the revision by Burckhardt & Lauterer (2006). Host-plants: unknown, probably several species of Rubiaceae, as for *T. galii*.

DISCUSSION

The psyllids collected in 2009, 2010 and 2011 during the ATBI+M project in the Mercantour National Park (together with the four species collected by I. Malenovský in the 1990's) comprise 68 species (40.2% of the 169 species reported from France in Fauna Europaea). Compared to the size of the Park, which covers only *c.* 0.12% of Metropolitan France, these results reflect the importance of such protected area for preserving ecosystems, especially in groups like psyllids that are closely dependant on the presence and abundance of their host-plants.

Seven of the species are new for France. In the case of *Craspedolepta artemisiae*, the data from Mercantour represent the westernmost record. *Craspedolepta nebulosa*, *Cacopsylla propinqua* and *Cyamophila probaskai* were already known from the Swiss (Burckhardt 1994b; Burckhardt *et al.* 2007; Schaefer 1949) and Italian Alps (Conci *et al.* 1993). *Trioza flixiana* is also known from the Swiss Alps (Burckhardt & Lauterer 2002b), but shows a larger area of distribution (Pyrenees, Spanish Basque Country; GBIF data) at a wider range of altitudes (Spain and Czech Republic). *Bactericera parastriola* was also known from the Swiss and Italian Alps, but also from Poland, Romania and Sweden (Conci *et al.* 1988), from Austria (Burckhardt & Lauterer 1997) and, more recently, from the Czech Republic (Lauterer & Malenovský 2002), indicating a boreomontane distribution. The presence of *Eryngiofaga refuga*, otherwise known only from Kazakhstan and West Siberia, remains to be confirmed, since only one male has been collected from Mercantour.

The range of altitudes in the Park, from 490-3143 m a.s.l., makes the potential psyllid fauna even richer than 67 species in the area, since only altitudes from 1421-2058 m have been sampled. That is why we find here several orophilous species like *Psylla alpina* (Pyrenees, Alps, Carpathians), *Trioza caesaris* (Alps), *Trioza schrankii* (Massif Central, Alps, Carpathians), *Trioza brachyceraea* (Massif Central, Alps), *Trioza senecionis* (Alps, Carpathians) and *Aphalara sauteri* (Alps and Andalusia according to Burckhardt & Lauterer 1997).

Other orophilous species found in the park that show a larger area of distribution, including Fennoscandia and/or expanding eastward, are: *Bactericera femoralis*, *Bactericera bohémica*, *Cacopsylla rhododendri*, *Psylla fusca*, *Trioza abdominalis*, *Trioza cerastii* and *Trioza proxima*. *Livilla pyrenaica* is present in the Pyrenees and the Alps, as well as in Algeria.

Two species, *Ctenarytaina eucalypti* and *Acizzia uncatoides*, originate from Australia and have been introduced into France on *Eucalyptus* (in the early 1980s) and on *Acacia* and *Albizzia*, respectively. Despite the presence of two males in a Malaise trap in this study, most populations of *C. eucalypti* have been controlled in eastern-southern France by the introduction of a specific parasitoid wasp, *Psyllaephagus pilosus* Noyes, 1988 (Malaus & Girardet 1997; Hodkinson 1999). *Calophya rhois* originates from East Asia, as does its host (*Cotinus coggygria*), and has probably been naturalised in France for a long time. *Livilla variegata* probably originates from eastern Europe, and its wide current distribution may be due to the use of *Laburnum* as an ornamental tree in many places in Europe. Another eucalyptus-feeding species originating from Australia, *Glycaspis brimblecombei* Moore, 1964, has recently been discovered in France (Cocquempot *et al.* 2012), in the southern part of the Alpes-Maritimes department, and could also be present in the Mercantour park on *Eucalyptus camaldulensis* Dehnh.

Several other orophilous species known from France have not been collected in the Mercantour, which may be due to the collecting methods used (mainly Malaise traps and limited net sweeping): *Cacopsylla corcontum* (Šulc, 1909), *C. elegantula* (Zetterstedt, 1840), *C. hippophaes* (Foerster, 1848), *C. myrtilli* (Wagner, 1947), *Bactericera bucegica* (Dobreanu & Manolache, 1962), *Trioza chrysanthemii* Löw, 1878, *T. dispar* Löw, 1878, *T. laserpitii* Burckhardt & Lauterer, 1982, *T. saxifragae* Löw, 1888, *T. rotundata* Flor, 1861 and *T. tatrensis* Klimaszewski, 1965.

Future fieldwork in the Mercantour National Park may lead to the discovery of several alpine or subalpine species never collected in France before, but present in bordering countries (Switzerland and Italy), such as *Livilla vicina* (Löw, 1886), *L. vittipennella* (Reuter, 1875), *Bactericera harrisoni* (Wagner, 1955), *Trioza remaudierei* Burckhardt & Lauterer, 2002, the rare *T. megacerca* Burckhardt, 1983 and *T. tripteridis* Burckhardt, Conci, Lauterer & Tamanini, 1991.

Cacopsylla iteophila is a rare and localised species (Conci & Tamanini 1990b) that feeds on *Salix*.

The most abundant species in Malaise traps, which are rarely used for collecting Psyloidea, were *Livilla pyrenaica*, *Trioza senecionis* and *Cacopsylla brunneipennis*. In sweep-net samples, the most common species were *Cacopsylla sorbi* and *C. artemisiae* (>100 specimens), followed by *Psyllopsis fraxinicola*, *Trioza centranthi* and *C. brunneipennis*.

Acknowledgements

The authors are grateful to Isabelle Meusnier and Antonin David (both CBGP, Montpellier, France) for processing molecular analyses (unpublished), and to Pavel Lauterer (Moravian Museum, Brno, Czech Republic) for confirming identifications. Special thanks to Igor Malenovský (Moravian Museum and Masaryk University, Brno, Czech Republic) for helpful review of this manuscript and for allowing us to add his own specimen data from the Mercantour.
