

Modeling of connectivity: What for? How do we do it? Where to go?

Frédéric Darboux

► To cite this version:

Frédéric Darboux. Modeling of connectivity: What for? How do we do it? Where to go?. Laboratory seminar, Université Catholique de Louvain (UCLouvain). Louvain, BEL., Sep 2015, Louvain-La-Neuve, Belgium. hal-01292348

HAL Id: hal-01292348 https://hal.science/hal-01292348

Submitted on 5 Jun2020

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

How do we do it? Where to go?

- Surface hydrology and sediment transport
- Not a review
- A few insights about how numerical models are used for connectivity

Questions addressed using models

- Where are the links/connections in the watershed?
- Are they active/How long do they last?
- o How do they behave as a whole?

- Surface hydrology and sediment transport
- Not a review
- A few insights about how numerical models are used for connectivity

(日) (同) (三) (三)

Questions addressed using models

- Where are the links/connections in the watershed?
- Are they active/How long do they last?
- How do they behave *as a whole*?

- Surface hydrology and sediment transport
- Not a review
- A few insights about how numerical models are used for connectivity

Hysteresis \implies Non-linear (i.e. non proportional) behavior \implies A very rich dynamics, *but under-studied*.

Few works on modelling sediment connectivity

- López-Vicente et al., 2013, Catena
- Cavalli et al., 2013, Geomorphology

Water connectivity vs Sediment connectivity

In hydrology, you need water to carry the sediments

- \bullet Sediment connection \Rightarrow Water connection
- Water connection ⇒ Sediment connection

More work on sediment connectivity needed, and models can help on this.

Few works on modelling sediment connectivity

- López-Vicente et al., 2013, Catena
- Cavalli et al., 2013, Geomorphology

Water connectivity vs Sediment connectivity

In hydrology, you need water to carry the sediments

- \bullet Sediment connection \Rightarrow Water connection
- Water connection \Rightarrow Sediment connection

More work on sediment connectivity needed, and models can help on this.

Few works on modelling sediment connectivity

- López-Vicente et al., 2013, Catena
- Cavalli et al., 2013, Geomorphology

Water connectivity vs Sediment connectivity

In hydrology, you need water to carry the sediments

- $\bullet \ \ Sediment \ \ connection \ \ \Rightarrow \ Water \ \ connection$
- Water connection \Rightarrow Sediment connection

More work on sediment connectivity needed, and models can help on this.

Connectivity-related theories: Inputs & Outputs

Theoretical inputs

Perco	ation	theory

- [Darboux et al., 2002, Earth Surf. Proc. Landf.]

Graph theory

[Heckmann et al., 2013, Geomorphology] •

Queuing theory

[Harel et al., 2013, Water Res. Research]

- Simplification in modeling
- Understanding
- Scale change

Questions that could be addressed

- Do connection directions matter? How much?
- How to account for connection intensity?

Do we need data?

Computer-generated data

What are the important features?

• How to make things more general?

• How to go farther than case studies?

[Peñuela et al., 2013, Hydrol. Earth Syst. Sci.]

- generate your data!
- generate your data!
- generate your data!

Don't be shy... generate your data!

- Connectivity is about space and time patterns.
- Justify that accounting for connectivity is valuable (and not just state it).
- Justify your algorithms.
- How to account for details.
- Combining numerical modeling and theory application.
- From case study to proven understanding (using data generation).
- From spatially-distributed modeling to a lumped index (ultimate goal).
