Context & Problem:

Filamentous fungi are well-known producers of a wide variety of biomolecules, such as bioactives compounds and pigments. Fungal red pigments are becoming a hot topic of research for food, cosmetics and textiles industries as no natural red colorant alternatives are available on the market, that could meet both consumer's organoleptic expectations and industrial processes requirements.

Moreover, the natural pigments available from either plants, insects or fungal origin are, currently, being extracted by conventional liquid-liquid extraction requiring important volumes of various organic solvents and time. Thus, any large scale applications rise environmental concerns, as well as uncertainties about their economical viability [1].

Objective:

The aim of this study is the development of more sustainable separation and purification techniques of fungal pigments to fully claim natural pigment alternatives.

Methods:

Ionic liquids (IL) are a new kind of solvent gaining recognition for their potential as green solvents in addition to their tunable properties to the target products [2].

Here, we investigated the use of three different ammonium or imidazolium-based ionic liquids, [N4444]Br⁻, [C₄MIM]Br⁻ and [C₄MIM]Cl⁻ respectively, as new type of solvents in Aqueous Two-Phases System (IL-ATPS). IL-ATPS is formed by mixing together a soluble IL (chaotropic agent) and a salt with a kosmotropic profile (Na₂CO₃ and Na₂CH₃CO₂). These systems allow the separation of two water soluble compounds into two immiscible aqueous-rich phases based. Effectiveness of the IL-based ATPS was tested on four filamentous fungal strains producing different azaphilones-like pigments: *Talaromyces albobiverticillius* (deep red), *Emericella purpurea* (red), *Trichoderma harzianum* (brown), and *Penicillium marquandii* (yellow) [3,4]. Selectivity of the extractive system for specific shade of pigments was also investigated. Lastly, the reverse extraction of the pigments from the IL-ATPS was carried out based on the ionisable profile of azaphilone-type molecules. In the end, the overall pigment recovery rate was determined.

Material & Strategy:

ILs	Buffer	Structure
[C4Mim]Br 1-Butyl-3-methylimidazolium bromide	Na ₂ CO ₃	
[C4Mim]Cl 1-Butyl-3-methylimidazolium chloride		
[N4444]Br Tetrabutylammonium bromide	Na ₂ CH ₃ CO ₂	

Table 1: Presentation of ILs selected and the kosmotropic salt buffer enabling a diphasic system

Fig. 1: Binodal curve for the determination of weight ratio of IL, salt buffer (Na₂CO₃ or Na₂CH₃CO₂) and water to produce biphasic systems. R1, R2 and R3 display the composition of the ATPS made with [C4MIM]Br⁻, [C4MIM]Cl⁻ and [N4444]Br⁻ respectively.

Fig. 2: Samples preparation and description of the extraction steps

Coefficients of partition of pigments (K_{pigment}):

⇒ 3 wavelengths followed: yellow (400nm), orange (470nm) and red (490nm)

⇒ Dilution factor of the IL phase sample (FD_{IL})

$$K_{red} = (A_{490\ IL} * FD_{IL}) / (A_{490\ salt} * FD_{salt})$$

$$K_{orange} = (A_{470\ IL} * FD_{IL}) / (A_{470\ salt} * FD_{salt})$$

$$K_{yellow} = (A_{400\ IL} * FD_{IL}) / (A_{400\ salt} * FD_{salt})$$

Phase ratio (R) and Selectivity of type of pigments ratio (S_{pigment}):

⇒ $R = V_{IL} / V_{salt\ phase}$

⇒ Express higher selectivity of IL tested against red, yellow or orange pigments:

$$S_{red/yellow} = K_{red} / K_{yellow}$$

$$S_{red/orange} = K_{red} / K_{orange}$$

Extraction efficiencies (Eff_D):

⇒ Direct extraction efficiency:

$$Eff_D \% = 100 * [K_{pigment} / (1 + (1/R))]$$

⇒ Overall extraction efficiency:

$$Eff_{tot} \% = m_{back\ extraction\ salt\ phase} / m_0$$

Where m_0 : initial mass of red pigments provided by the fermentative broth (calculated in *Monascus* red pigments equivalent)
 $m_{back\ extraction\ salt\ phase}$ = mass of red pigment (*Monascus* red equivalent) recovered in the salt phase after the second extraction

Results & Discussions:

Partition coefficients of pigments (K_{pigment}) and selectivity of pigment:

	[C4MIM]Br ⁻	[C4MIM]Cl ⁻	[N4444]Br ⁻
<i>T. albobiverticillius</i> (30548)			
<i>E. purpurea</i> (3323)			
<i>P. marquandii</i> (2271)			
<i>T. harzianum</i> (V1722)			
Control (Alizarine)			

Fig. 3: Visual aspect of the first step of extraction from the different IL-ATPS tested and their extraction abilities on fermentation broth and pure pigment control (alizarine).

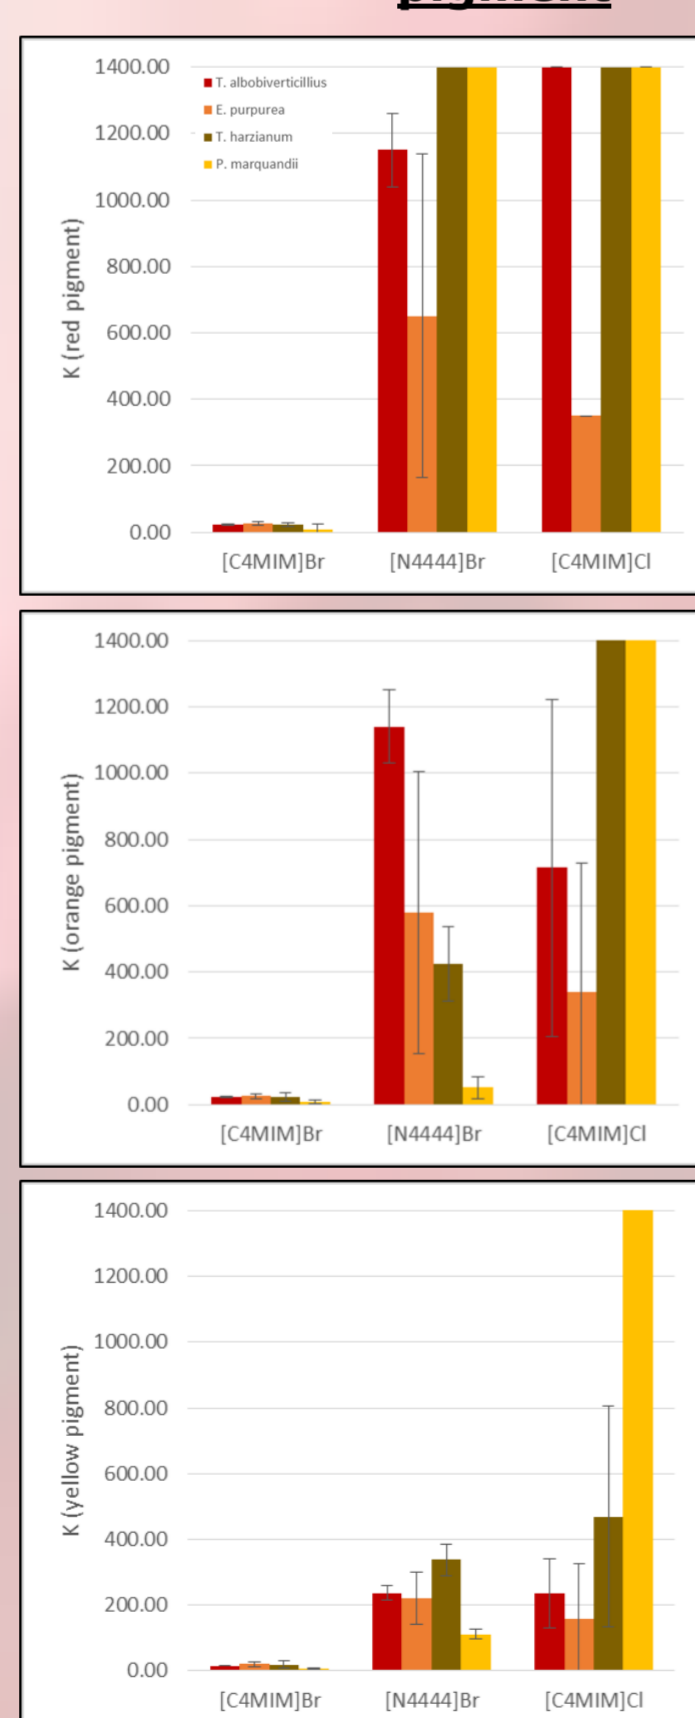

Fig. 4: Partition coefficients of red (A), orange (B) and yellow (C) pigments for each strain in the 4 IL-ATPS tested.

✓ Visual aspect (Fig. 3): difference in extraction ability from IL to IL.

✓ [C4MIM]Cl⁻ showed better abilities for red to orange pigments extraction on high-red producing strains (*T. albobiverticillius* and *E. purpurea*) (Fig. 4 A and B) under experimental conditions.

✓ [C4MIM]Cl⁻ showed high extraction ability of yellow pigments on high yellow producing strain (*P. marquandii*) (Fig. 4 C).

✓ [C4MIM]Br⁻ showed the lowest extraction capacity for any pigments shades under the conditions tested.

[C4MIM]Cl⁻ showed the best efficiency values (~99,9%) for all three sorts of pigments tested in the first extraction step.

Back extraction and overall efficiencies:

IL	<i>T. albobiverticillius</i> (30548)	<i>E. purpurea</i> (3323)	<i>P. marquandii</i> (2271)	<i>T. harzianum</i> (V1722)
[C4MIM]Cl ⁻	pH=5			
	pH=13			
[C4MIM]Br ⁻	pH=5			
	pH=13			
[N4444]Br ⁻	pH=5			N/A
	pH=13			N/A

Fig. 5: Visual aspect of the reverse extraction step for each different IL-ATPS tested

✓ Visual aspect (Fig. 5): reverse extractions remained limited.

✓ Increase of pH to 13 did not induce the recovery of any of the pigments tested under the experimental conditions.

✓ Overall efficiencies and recovery ability from the three IL-ATPS investigated were concluded as very poor under the experimental conditions (Fig. 6).

Fig. 6: Overall efficiency of red pigments extraction for each strain in the 4 IL-ATPS tested.

Conclusions & future work:

The combination of ATPS extraction system using IL as solvent is a possible and powerful tool for effective extraction of pigmented molecules from fermentation broth from filamentous fungi. However, the recovery of the pigments from the IL-phase remains the bottleneck of this method, and this limitation has already been noticed in literature.

Nevertheless, [C4MIM]Cl⁻ showed the best extraction abilities of fungal pigments from the ILs tested here with putative higher affinity for red pigments [5]. It can be concluded as an promising solvent that is worth to further investigate using other types of buffers and pH. Additionally, other types of IL-based extraction methods would be interesting to compare, such as microemulsions using hydrophobic IL or IL extraction paired with microwave assisted extraction.

Keywords: fungal pigments, polyketides, ionic liquids, extraction

Filamentous fungi have been widely recognized as promising sources of various types of biomolecules and are therefore highly investigated. The production of fungal pigments is one intensively studied domain in order to respond to the growing demand for natural colorants as substitutes to synthetic dyes used in food, cosmetics, pharmaceutical and textile industries. Such interest in the natural origins of the pigments is driving the search for new and greener extraction systems. It is desired to develop extraction processes that would use less organic solvents and milder conditions, allow higher and quicker extraction yields, as well as improved selectivity and better recovery. Over the last two decades, ionic liquids (ILs) have caught attention as novel green solvents, and have already been applied in various separation systems (membranes separation, additives in mobile phase and surface-bonded stationary phases in chromatography) [1]. ILs are molten salts that can display a vast variety of chemical properties based on the specific association of a bulky and asymmetric organic cation with an organic or inorganic anion. The use of an aqueous two-phase systems (ATPS) based on ionic liquids allows to tailor the extraction system to the pigmented molecule of interest, here fungal pigmented polyketides. In this study, several ATPS based on quaternary ammonium ([N4444]Br⁻) and imidazolium ([C4Mim]Cl⁻ and [C4Mim]Br⁻) ionic liquids were investigated for the efficient extraction and recovery of soluble polyketides pigments from the fermented broth of four fungal strains: *Talaromyces albobiverticillius*, *Emericella purpurea*, *Penicillium marquandii*, *Trichoderma harzianum*. These four families are known to produce mainly polyketides pigments such as azaphilone and hydroxyanthraquinone pigments, which are the main targets in the field of fungal pigments research [2,3]. The extraction efficiency of red, orange and yellow hues was investigated with a particular focus on the soluble red pigments extraction efficiency and recovery from the three different ATPS tested. The results showed that extraction yields of extracellular pigments of all hues from all strains are greater than 80%, with [N4444]Br⁻ and [C4Mim]Cl⁻ reaching between 90 and 100% extraction efficiencies. Moreover, these two IL-based ATPS tend to preferably isolate red pigments under alkaline conditions, which is in agreement with previous studies [4]. The second step of this study, which focused on the recovery of the different pigments from the ILs, remains under investigation as the affinity of the IL for the pigmented molecules seems high and difficult to reverse.

Nevertheless, the initial results of this study bring novel strategies for the selective extraction of extracellular fungal pigments. As a next step, further investigation would be required in determining the specific solubility of azaphilones and hydroxyanthraquinones-like molecules in the different ILs.

Pigments in Food- VIII (2016) in Cluj-Napoca, Romania are dedicated to health benefits!

PREFACE

On behalf of the Organizers of the Eight International Congress PIGMENTS IN FOOD, it is our pleasure to welcome you, at the Department of Chemistry and Biochemistry at the University of Agricultural Sciences and Veterinary Medicine Cluj-Napoca, Romania.

After seven successful Congresses “Pigments in Food”, starting in Sevilla, Spain (1999) and passing through Lisbon, Portugal (2002), Quimper, France (2004), Stuttgart-Hohenheim, Germany (2006), Helsinki, Finland (2008), Budapest, Hungary (2010), and Novara, Italy (2013), we are honored to host this edition, PIF2016 in the capital of Transylvania region, Romania.

It was the best opportunity for scientists from all over the world (17 countries: UK, USA, Germany, France, Reunion Island, Spain, Italy, Denmark, Hungary, Poland, Turkey, Brazil, Uruguay, Panama, Mexico, China and Romania) to show their advances in scientific and technological topics, related to plant pigments and food colorants.

The 6 sessions were well adapted to cover the most important and outstanding directions of research and technology development in this research e.g. chemical characterization and bioprospecting, to advanced bioanalytical methods, (bio)technological production and formulation, pigment processing and stability, bioactivity, functionality and health effects, as well quality and safety aspects.

The program includes 5 plenary lectures and 7 keynote lectures by best international experts in the field, as well as 20 oral presentations and more than 65 poster contributions. An important aim of PIF2016 is also represented by the opportunity of meeting and discussion for scientists dealing with different aspects of pigments, such as chemists, food chemists, food technologists, biotechnologists, nutritionists, but also industry representatives.

A comprehensive scientific program, adapted to the new approaches and trends in this scientific area was designed and realized – such approach had a particularly strategic aim, to demonstrate that and how pigments and colored food bring health benefits.

We are delighted to offer you, meanwhile, the opportunity to visit the historical city of Cluj-Napoca, to enjoy the traditional food and life in the beautiful Transylvanian landscape and to discover our cultural and academic heritage!

On behalf of the Organizing Committee,

Carmen Socaciu - chair
Adela Pinteau – co-chair

- 10.15-10.30 O11. Encapsulation in cyclodextrins of pumpkin and tomato oleoresins extracted by supercritical CO₂.
Miriana Durante, Marcello Salvatore Lenucci, Pier Paolo Marrese, Vito Rizzi, Monica De Caroli, Gabriella Piro, Paola Fini, Giovanni Mita,
Istituto di Scienze delle Produzioni Alimentari, Consiglio Nazionale delle Ricerche (CNR), Lecce, Italy

- 10.30-10.45 O12. Computer simulation and experimental methods to study influence of three phenolic acids on peonidin derivative stability.
Manman Lu, Jianxiong Cai, Wei Xu, Jing Chen, Shujuan Zhao, Pu Jing
Department of Food Science and Engineering, Shanghai Jiao Tong University, Shanghai
- 10.45-11.00 O13. Formation of coloured diaminobenzoquinones from (ethyl)vanillin in bakery products.
M. Arlorio, R. Negri, G. del Favero, J.D. Coisson, V. Papillo, F. Travaglia, V. Gokmen, D. Marko, G.B. Giovenzana.
Dipartimento di Scienze del Farmaco & Drug and Food Biotechnology Center, Università del Piemonte Orientale A. Avogadro, 28100 Novara, Italy
- 11.00-11.30 *Coffee Break & Poster session*
- Session 5**
Bioactivity, functionality and health effects
Chair: Øyvind Andresen - Damaso Hornero-Mendez
- 11.30-12.00 K6. Bioavailability, bioaccessibility and bioconversion of the major provitamin A carotenoids in the human diet.
Begoña Olmedilla-Alonso,
Institute of Food Science, Technology and Nutrition (ICTAN-CSIC), Madrid, Spain
- 12.00-12.15 O14. Bioavailability of chlorophyll derivatives in human epithelial cells.
Kewei Chen, María Roca,
Department of Food Phytochemistry, Instituto de la Grasa, CSIC, Sevilla, Spain
- 12.15-12.30 O15. Hypolipemic activity of astaxanthin supplementation in mice.
Myriam Benarroch, Justine Lallement, Larbi Rhazi, Camille Boroch, Cindy Hugot, Claude-Narcisse Niamba, Hassan Younes, Flore Depeint,
Department of Nutrition and Health Sciences, LaSalle Beauvais Polytechnic Institute, Beauvais, France
- 12.30-12.45 O16. Human colostrum is a pool of carotenoid metabolites. A systematic approach with MS tools.
Antonio Pérez-Gálvez, Juan Garrido-Fernández, José J. Ríos, Adriana Mercadante, Ana A.O. Xavier, Josefa Aguayo Maldonado,
Food Phytochemistry Department, Instituto de la Grasa (CSIC), Sevilla, Spain
- 12.45-13.00 O17. Health turns red: comparative study on supercritical CO₂ extraction of lycopene from fruits and effect of the nanocarrier encapsulated oleoresins on cultured lung adenocarcinoma cells.
Andreina Bruno, Mirana Durante, Elisabetta Pace, Pier Paolo Marrese, Giovanni Mita, Gabriella Piro, Marcello S. Lenucci,
Dipartimento di Scienze e Tecnologie Biologiche ed Ambientali (Di.S.Te.B.A.), Università del Salento, Lecce, Italy
- 13.00-13.15 O18. Development and human clinical study of a new vegetable puree product.
Gábor Palotás, Eszter Sarkadi Nagy, Hussein Daood, Éva Martos, Lajos Helyes, Andrea Lugasi,
Univer Product Zrt., Kecskemét, Hungary

- 13.15-14.15 *Lunch break and Poster session*
14.30-22.00 *Transylvanian Landscape Trip: from Salt Mine Turda to Colțesti, a typical Transylvanian village (including Dinner)*

01.07.2016. Friday

Session 6

Quality and safety of food pigments

Chair: Philippe Thonart - Gerhard Sandmann

- 9.00-9.30 K7. Perspectives in innovation in food pigments – An industry view.
Manfred Eggersdorfer, Ulrich Killeit, Dirk Cremer,
DSM Nutritional Products, Kaiseraugst, Switzerland
- 9.30-9.45 O19. Oxidation of edible oils in presence of carotenes and xanthophylls.
Michael Murkovic, Alam Zeb, Marini Damanik,
Graz University of Technology, Institute of Biochemistry, Functional Food Group, Petersgasse 12/2, 8010 Graz, Austria
- 9.45-10.00 O20. Colour evaluation and antioxidant activity of red cabbage extract in presence of different additives.
Antoanela Patras, Razvan Filimon.
Department of Sciences, Faculty of Horticulture, University of Agricultural Sciences and Veterinary Medicine „Ion Ionescu de la Brad”, Iasi, Romania
- 10.00-10.35 Selected poster presentations
- 10.35-11.15 *Coffee Break & Poster session*

Session 7

Round Table

- 11.15-12.15 Presentation of EU projects: COST EUROCAROTEN, FP-7 DISCOvery and PROCAR
O21. From DISCOvery to products: A next generation pipeline for the sustainable generation of high-value plant products
The DISCO consortium (coordinator Paul D. Fraser)
Biochemistry, School of Biological Sciences, Royal Holloway University of London, Egham Hill, Egham, Surrey, TW20 OEX. UK
O22. Cost action EUROCAROTEN (European network to advance carotenoid research and applications in agro-food and health, CA15136)
Antonio J. Meléndez-Martínez
Food Colour & Quality Lab., Department of Nutrition & Food Science, Universidad de Sevilla, Seville, Spain.
O23. PROCAR: the exploitation of *Xanthophyllomyces Dendrorhous* as a sustainable platform for the production of high-value carotenoids, an ERA-IB-14-073 project.
Gerhard Sandmann,
Biosynthesis Group, Molecular Biosciences, Goethe University Frankfurt, Frankfurt, Germany
- 12.15-13.00 Poster Awards and Closing ceremony
- 13.00-14.00 *Lunch*

List of Posters

Session 1 Chemical characterization and Bioprospecting

1

- P1-1 Far UV peak contributes to the identification of E/Z isomers of carotenoids.
Enrique Murillo,
Laboratorio de Bioquímica de Alimentos y Nutrición, Universidad de Panamá, Panamá, Panamá
- P1-2 Isolation of allene carotenoids from mamey.
Attila Agócs, Enrique Murillo, Erika Turcsi, Szabolcs Béni, András Darcsi, József Deli
Department of Biochemistry and Medical Chemistry, University of Pécs, Hungary
- P1-3 Evaluation of bioactive compounds in fermented black table olives.
Miriana Durante, Maria Tufariello, Luca Tommasi, Gianluca Bleve, Giovanni Mita
Istituto di Scienze delle Produzioni Alimentari, Consiglio Nazionale delle Ricerche (CNR), Lecce, Italy
- P1-4 Anthocyanins composition of jaboticaba and pitanga from different cities of Brazil
Anna Rafaela Braga, Katia Biazotto, Veridiana Vera de Rosso,
Biosciences Department, Federal University of São Paulo, Santos - São Paulo, Brazil
- P1-5 Carotenoid composition of four Brazilian fruits from Atlantic forest and cerrado.
Kátia Regina Biazotto, Anna Rafaela Cavalcante Braga, Veridiana Vera de Rosso,
Biosciences Department, Federal University of São Paulo, Santos - São Paulo, Brazil
- P1-6 Black as a tomato: the anthocyanin-synthesizing tomato genotype 'Sun BlackTM'
F. Blando, H. Berland, M. Durante, C. Gerardi, A. Mazzucato, G. Mita, Ø M Andersen
Institute of Sciences of Food Production - Lecce section Italian National Research Council (CNR), Lecce- Italy
- P1-7 Reduction of decarboxylated derivatives of betacyanin pigments.
Dominika Szot, Sławomir Wybraniec,
Department of Analytical Chemistry, Institute C-1, Faculty of Chemical Engineering and Technology, Cracow University of Technology, Cracow, Poland
- P1-8 Oxidation of hydrogenated derivatives of betanin.
Dominika Szot, Sławomir Wybraniec,
Department of Analytical Chemistry, Institute C-1, Faculty of Chemical Engineering and Technology, Cracow University of Technology, Cracow, Poland
- P1-9 Anthocyanin-rich extract from Italian black rice (*Var. Artemide*) as functional ingredient for bakery products.
Monica Locatelli, Valentina Azzurra Papillo, Fabiano Travaglia, Jean Daniel Coisson and Marco Arlorio
Dipartimento di Scienze del Farmaco & Drug and Food Biotechnology Center, Università degli Studi del Piemonte Orientale, Novara, Italy

- P1-10 Application of progressive pearling process to anthocyanins rich wheat cultivars to obtain pigmented ingredients.
Monica Locatelli, Valentina A. Papillo, Stefania Monteduro, Fabiano Travaglia, Debora Giordano, Amedeo Reyneri, Massimo Blandino, Marco Arlorio, Jean Daniel Coisson,
Dipartimento di Scienze del Farmaco, Università del Piemonte Orientale “A. Avogadro”, Novara, Italy
- P1-11 Carotenoid glycoside isolated and identified from cyanobacterium *Cylindrospermopsis raciborskii*.
Veronika Nagy, Attila Agócs, József Deli, Gergely Gulyás-Fekete, Tünde-Zita Illyés, Erika Turcsi, Gábor Vasas,
Department of Biochemistry and Medical Chemistry, University of Pécs, Pécs, Hungary
- P1-12 Extraction of fungal polyketide pigments using ionic liquids.
Juliana Lebeau, Mekala Venkatachalam, Mireille Fouillaud, Laurent Dufossé and Yanis Caro,
University of La Réunion, LCSNSA & ESIROI Saint-Denis, Reunion Island, Indian ocean, France
- P1-13 Marine-derived fungi producing red anthraquinones: new resources for natural colors?
Mireille Fouillaud, Mekala Venkatachalam, Yanis Caro, and Laurent Dufossé,
Laboratoire de Chimie des Substances Naturelles et des Sciences des Aliments – LCSNSA EA2212, Université de la Réunion, Saint-Denis, Ile de la Réunion, France
- P1-14 Distribution and evolution of phenolic compounds in skins and seeds of different grape varieties.
Elisabeta-Irina Geană, Alexandru Ciocârlan,
National R&D Institute for Cryogenics and Isotopic Technologies – ICIT Rm. Valcea, 4th Uzinei Street, PO Raureni, Box 7, 240050 Rm. Valcea, Romania
- P1-15 Phenolic profile and antioxidant properties of functional foods based on honey and dry fruits.
Elisabeta-Irina Geană, Cornelia Dostetan,
National R&D Institute for Cryogenics and Isotopic Technologies – ICIT Rm. Valcea, 4th Uzinei Street, PO Raureni, Box 7, 240050 Rm. Valcea, Romania
- P1-16 Optimization of fermentation conditions for fungal growth and production of red pigments from *Talaromyces albobiverticillius* using response surface methodology.
Mekala Venkatachalam, Alain Shum Cheong Sing, Yanis Caro, Laurent Dufossé, Mireille Fouillaud,
Laboratoire de Chimie des Substances Naturelles et des Sciences des Aliments – LCSNSA EA 2212, Université de la Réunion, 15 Avenue René Cassin, CS 92003, F-97744 Saint-Denis Cedex 9, Ile de la Réunion, France
- P1-17 Bacterial carotenoid production of antarctic isolates.
María Eugenia Vila, Gastón Azziz, Silvia Batista, Verónica Saravia,
Bioengineering Department, Chemical Engineering Institute, Engineering Faculty, Universidad de la República, Montevideo, Uruguay.
- P1-18 Potential of chromosomes 7D and 7D^{ch} for the enhancement of lutein esterification in wheat.
Maria G. Mattera, Adoración Cabrera, Dámaso Hornero-Méndez, Sergio G. Atienza,
Department of Food Phytochemistry, Instituto de la Grasa (CSIC), Campus Universidad Pablo de Olavide, Edificio 46, Ctra. de Utrera, Km 1, E-41013 Sevilla, Spain

- P1-19 Identification and quantification of anthocyanins in wild berries by HPLC-PDA-ESI-MS.
Zorița Diaconeasa, Dumitrița Rugină, Loredana F. Leopold, Andrea Bunea, Andreea Stănilă, Carmen Socaciu,
Department of Food Science and Technology, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania

Session 2 Advanced bioanalytical methods

2

- P2-1 Structural characterization of chlorophyll derivatives.
 Antonio Perez-Gálvez, K. Chen, José Julián Ríos, María Roca,
Department of Food Phytochemistry, Instituto de la Grasa, CSIC, Sevilla, Spain
- P2-2 Separation of mamey (*Pouteria sapota*) carotenoid epoxide diastereomers on chiral stationary phase.
Erika Turcsi, Tibor Kurtán, Enrique Murillo, Veronika Nagy, József Deli,
Department of Biochemistry and Medical Chemistry, University of Pécs, Pécs, Hungary
- P2-3 A solid-phase extraction method for reducing matrix effect on the MSⁿ analysis of xanthophyll esters.
Ana A.O. Xavier, Juan Garrido-Fernández, José J. Ríos, Antonio Pérez-Gálvez,
Laboratório de Química de Alimentos, DCA - FEA – UNICAMP Campinas, São Paulo - Brasil
- P2-4 Thin layer chromatography (TLC) separation combined with RAMAN mapping for carotenoid identification.
Loredana Florina Leopold, Cristina Coman, Zorita Diaconeasa, Nicolae Leopold, Carmen Socaciu,
Faculty of Food Science and Technology, University of Agricultural Sciences and Veterinary Medicine, Mănăştur 3-5, 400372 Cluj-Napoca, Romania
- P2-5 Raman imaging of norbixin after cellular internalization in D407 RPE cells.
Cristina Coman, Loredana Florina Leopold, Olivia Dumitrița Rugină, Zorița Diaconeasa, Oana Lelia Pop, Maria Tofană, Carmen Socaciu, Adela Pinteau, Nicolae Leopold,
Faculty of Food Science and Technology, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania

Session 3 Emerging (bio)technologies of pigment production and formulation

3

- P3-1 Emerging greener extraction systems for fungal pigments isolation.
 Juliana Lebeau, Mekala Venkatachalam, Mireille Fouillaud, Laurent Dufossé and Yanis Caro,
University of Reunion Island, LCSNSA & ESIROI, Saint-Denis, Reunion Island, Indian ocean, France.
- P3-2 Identification of chlorophyll profile in *Phormidium utumnale* biomass.
Leila Queiroz Zepka, Gabriela P. Nogara, Andressa S. Fernandes, Daniele B. Rodrigues, Adriana Z. Mercadante, Eduardo Jacob-Lopes,
Department of Food Technology and Science, University Federal of Santa, Santa Maria, Brazil
- P3-3 The bioeconomy of carotenoid-rich oleoresins produced in microalgal biorefineries.
Eduardo Jacob-Lopes, Tatiele Casagrande do Nascimento, Leila Queiroz Zepka,
Department of Food Technology and Science, Federal University of Santa Maria, Brazil

- P3-4 Carotenoid profile and antioxidant capacity of three microalgae species.
Eduardo Jacob-Lopes, Tatiele Casagrande do Nascimento, Luciana Dapieve Patias, Andressa Fernandes, Leila Queiroz Zepka,
Department of Technology and Food Science, Federal University of Santa Maria-RS, Brazil
- P3-5 Bioconversion of anthocyanins from jussara pulp by *Lactobacillus* and *Bifidobacterium*.
Anna Rafaela Braga, Veridiana Vera de Rosso,
Biosciences Department, Federal University of São Paulo, Santos - São Paulo, Brazil
- P3-6 New and sustainable carotenoid extraction from tomatoes for food industry.
Paula Martins, Veridiana de Rosso,
Departamento Bioscience, Federal University of São Paulo, Baixada Santista, Brazil
- P3-7 Carotenoid-rich microspheres and microcapsules: comparative efficiency of encapsulation, stability and delivery *in vitro* (simulated gastric and intestinal media).
F. Romanciuc, A. Lazar, F. Csernaton, C. Socaciu,
*University of Agricultural Sciences and Veterinary Medicine
RTD Centre for Applied Biotechnology, Proplanta SRL*
- P3-8 Zeaxanthin production by *Antarctic Flavobacterium* Sp..
María Eugenia Vila, Alejandra Rodriguez, Verónica Saravia,
Bioengineering Department, Chemical Engineering Institute, Engineering Faculty, Universidad de la República, Montevideo, Uruguay
- P3-9 A metabolite profiling approach to the characterisation of new colour mutants in *Xanthophyllomyces dendrorhous*.
Eugenio Alcalde, Thunazzina Ali and Paul D Fraser,
School of Biological Science, Royal Holloway University of London, Egham, TW20 0EX, UK
- P3-10 Phenolic compounds, flavonoids, carotenoids and antioxidant capacity of apricot (*Prunus armeniaca* L.) pomace fermented by two filamentous fungi in solid state system.
Francisc V. Dulf, Dan C. Vodnar, Andrea Bunea, Adela Pinte, Carmen Socaciu,
Department of Environmental and Plant Protection, University of Agricultural Sciences and Veterinary
- P3-11 Microwave effect on free and encapsulated, with or without sea buckthorn, *Lactobacillus casei* ATCC 393 in yoghurt.
Oana Lelia Pop, Francisc Dulf, Lucian Cuiabus, Dan Cristian Vodnar, Cristina Coman, Carmen Socaciu, Ramona Suharoschi,
Department of Food Science, University of Agricultural Science and Veterinary Medicine Cluj-Napoca, Romania
- P3-12 Carotenoid production by *Blaskelea trispora* on crude glycerol media.
Vodnar Dan Cristian, Francisc Vasile Dulf, Alexandru Rusu, Trif Monica, Pop Oana Lelia, Socaci Sonia, Carmen Socaciu,
Department of Food Science and Technology, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania

Session 4 Food processing, pigments stability and color development

- P4-1 Evaluation of color stability of the non-genotoxic purple pigment from *Peltogyne mexicana* heartwood as a colorant for yoghurt and gelatin products.
Paulina Gutiérrez, Cinthya Gutiérrez, Leticia Garduño, Myriam Arriaga,
Blanca Barragán,
Department of Environmental Systems Engineering, Instituto Politécnico Nacional, México City, Mexico

- P4-2 Stability of betalain from *Stenocereus pruinosus* fruit as a yellow-orange colorant for gummies and model beverages.
Juan A. Rodríguez-Sánchez, Blanca E. Barragán-Huerta,
Department of Environmental Systems Engineering, Escuela Nacional de Ciencias Biológicas, Instituto Politécnico Nacional, Av. Wilfrido Massieu, Unidad Profesional Adolfo López Mateos, D.F. 07738, Mexico
- P4-3 Influence of olive fruit stones on changes and transfer of chlorophyll pigments during virgin olive oil elaboration.
Honorio Vergara-Domínguez, María Roca and Beatriz Gandul-Rojas,
Chemistry and Biochemistry Pigment Group, Food Phytochemistry Department, Instituto de la Grasa (CSIC), Sevilla, Spain
- P4-4 Changes and transfer of chlorophyll pigments during virgin olive oil elaboration from heat-treated fruits.
Honorio Vergara-Domínguez, María Roca and Beatriz Gandul-Rojas B.
Chemistry and Biochemistry Pigment Group, Food Phytochemistry Department, Instituto de la Grasa (CSIC), Sevilla, Spain
- P4-5 Pigment changes during preservation of green table olive specialities treated with alkali and without fermentation: effect of thermal treatments and storage conditions.
Beatriz Gandul-Rojas, Lourdes Gallardo-Guerrero,
Chemistry and Biochemistry Pigment Group, Food Phytochemistry Department, Instituto de la Grasa (CSIC), Sevilla, Spain
- P4-6 Development of carrots with high pigmentation for natural food colors.
Sabine Karin Clausen, Søren Kjærsgaard Rasmussen,
University of Copenhagen, Faculty of Science, Department of Plant and Environmental Sciences, Section for Plant and Soil Science, Molecular Plant Breeding Group, Thorvaldsensvej 40, 1871 Frederiksberg C, Denmark
- P4-7 Anthocyanin and phenolic profile of red wines obtained from Karalahna grapes, a native grape variety of Bozcaada (Tenedos), Turkey
Burcu Şişli, Nesrin Merve Çelebi, Aslı Bayhan, Ayşegül Kırca Toklucu,
Department of Food Engineering, Faculty of Engineering, Çanakkale Onsekiz Mart University, Çanakkale, Turkey
- P4-8 Effect of spontaneous and inoculated fermentations on anthocyanins and phenolics of Cabernet Sauvignon wines.
Nesrin Merve Çelebi, Burcu Şişli, Aslı Bayhan, Ayşegül Kırca Toklucu,
Department of Food Engineering, Faculty of Engineering, Çanakkale Onsekiz Mart University, Çanakkale, Turkey
- P4-9 The effect of physical form of *Phaeodactylum tricornutum* biomass on fucoxanthin extraction.
Saniye Akyıl, Işıl İlter, Mehmet Koç, Zeliha Demirel, Ayşegül Şeker- Erdoğan, Meltem Conk- Dalay, Figen Kaymak-Ertekin,
Food Engineering Department, Faculty of Engineering, Ege University, Bornova-IZMIR- TURKEY
- P4-10 Juice processing effects on quality of aronia pomace—a resource for colour extraction.
Michael Vagiri and Martin Jensen,
Department of Food Science, Aarhus University, Kirstinebjergvej 10, DK-5792, Årslev, Denmark
- P4-11 Spectral and colorimetric characteristics of metal chelates of acylated cyanidin derivatives.
Gregory T. Sigurdson, Rebecca Robbins, Thomas Collins, M. Mónica Giusti
The Ohio State University, Dept. of Food Science and Technology, 2015 Fyffe Ct., Columbus, OH 43210-1007, United States

- P4-12 The influence of copigmentation, pH and ionic force on the antioxidant activity and colour parameters of chokeberry (*Aronia melanocarpa*) extract.
Elena Cristea, Rodica Sturza, Marius Niculaua, Aliona Ghendov-Moşanu, Antoanela Patras,
Department of Sciences, Faculty of Horticulture, University of Agricultural Sciences and Veterinary Medicine „Ion Ionescu de la Brad”, Iasi, Romania
- P4-13 Anthocyanins thermal degradation in sour cherry extract on fluorescence spectroscopy and kinetic modeling basis.
Ana Maria Oancea, Florentina Mihaela Ursache, Gabriela Râpeanu and Nicoleta Stănciuc,
Dunărea de Jos University of Galati, Faculty of Food Science and Engineering, Domnească Street 111, 800201, Galati, Romania
- P4-14 Thermal degradation of the total carotenoid content and antioxidant activity of sea buckthorn (*Hippophae rhamnoides L.*)– A kinetic study.
Florentina Mihaela Ursache, Ana Maria Oancea, Gabriela Râpeanu and Nicoleta Stănciuc,
Dunărea de Jos University of Galati, Faculty of Food Science and Engineering, Domnească Street 111, 800201, Galati, Romania
- P4-15 Thermal degradation kinetics of anthocyanins extracted from anthocyanins extracted from sweet cherries.
Mihaela Turturică, Nicoleta Stănciuc, Gabriela Bahrim, Gabriela Râpeanu, Dunărea de Jos University of Galati, Faculty of Food Science and Engineering, 111 Domnească Street, 800201, Galati, Romania
- P4-16 Identification and quantification of carotenoids presents in Brazilian peppers compared to other varieties.
José Fernando Rinaldi Alvarenga, Paola Andressa Schurachio, Maria Terezinha Silva Bonifácio, Célia Maria Sylos,
Department of Food Science and Nutrition, School of Pharmaceutical Science, UNESP, Araraquara, SP, Brazil
- P4-17 Lipophilic antioxidant capacity, color proprieties and carotenoid content of peppers cultivated in Brazil.
José Fernando Rinaldi Alvarenga, Paola Schurachio, Maria Terezinha Silva Bonifácio, Célia Maria Sylos,
Department of Food Science and Nutrition, School of Pharmaceutical Science, UNESP, Araraquara, SP, Brazil
- P4-18 Stability of carotenoids in frozen and dried sea buckthorn (*Hippophae Rhamnoides L.*) berries.
Elena Andreea Pop, Andrea Bunea, Adela Pinteau,
Department of Chemistry and Biochemistry, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania
- P4-19 The variation of chlorophylls, carotenoids and antioxidant activity in fresh, frozen and dried aromatic plants.
Sanda Andrei, Andrea Bunea, Constantin Bele, Adela Pinteau,
Department of Biochemistry, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania

Session **Bioactivity, functionality and health effects**

5

- P5-1 New approach for pigment metabolomics studies.
María Roca, José Julián Ríos, Antonio Pérez-Gálvez,
Department of Food Phytochemistry, Instituto de la Grasa, CSIC, Sevilla, Spain.

- P5-2 Intervention with different doses of oleaginous extracts of *Tagetes* or kale: effects on lutein content in plasma, lipophilic antioxidant capacity and macular pigment optical density.
Carina Holzwarth, Lara Schubert, Kai Wildner, Volker Böhm,
Institute of Nutrition, Friedrich Schiller University Jena, Jena, Germany
- P5-3 Identification of main dietary sources of polyphenols and assessment of consumption frequency of polyphenol-rich foods and beverages in a typical sample of Romanian adult population.
Iris-Lisbeth Müller, Elena Rakosy-Tican,
Doctoral School of Integrative Biology, Babeş-Bolyai University, Cluj-Napoca, Romania
- P5-4 Chemistry of fungi in chemistry classes of lower and upper secondary level.
Farina Bunjes, Martin Rühl, Verena Pietzner, Holger Zorn, Peter Fleischmann,
Chemistry Education, Institute of Chemistry, Oldenburg University, Oldenburg, Germany
- P5-5 Pigments in blueberries (*Vaccinium myrtilloides* L.) and sea buckthorn (*Hippophae rhamnoides* L.) used in the treatment of diabetes.
Dana Pusta, Roman Morar, Alexandra Pusta,
Department of Animal Productions and Food Safety, Faculty of Veterinary Medicine, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania
- P5-6 Technological strategies for the use of watermelon as a source of bioactive molecules and antioxidant pigments.
Marcello S. Lenucci, Stefania Grassi, Pier Paolo Marrese, Anna Montefusco,
Dipartimento di Scienze e Tecnologie Biologiche ed Ambientali (Di.S.Te.B.A.), Università del Salento, Lecce, Italy
- P5-7 Green vegetables may not be the most important determinant of macular pigment optical density: a study of food source and colour in Spanish subjects.
Rocío Estévez-Santiago, Begoña Olmedilla-Alonso, Beatriz Beltrán-de-Miguel, Carmen Cuadrado-Vives,
Institute of Food Science, Technology and Nutrition (ICTAN-CSIC), Madrid (Spain)
- P5-8 Lupines as model for teaching sustainable food production.
Jutta Honkomp, Michael Schott, Peter Eisner, Verena Pietzner,
Chemistry Education, Institute of Chemistry, Oldenburg University, Oldenburg, Germany
- P5-9 Bioaccessibility of phytoene and phytofluene from fruit and vegetable juices as compared to other carotenoids.
Paula Mapelli-Brahm, Joana Corte-Real, Antonio J. Meléndez-Martínez,
Torsten Bohn,
Food Colour & Quality Lab., Dpt. of Nutrition & Food Science, Universidad de Sevilla, Seville, Spain
- P5-10 Elderberry-derived anthocyanins induce apoptosis and inhibit cell proliferation in melanoma cells.
Rugină Dumitrița, Hanganu Dana, Diaconeasa Zorița, Coman Cristina, Leopold Loredana, Bunea Andrea, Pinteada Adela,
Faculty of Veterinary Medicine, University of Agricultural Sciences and Veterinary Medicine, Cluj-Napoca, Romania

Session Quality and safety of food pigments

6

- P6-1 Infogest *in vitro* digestion method adapted to carotenoids.
Daniele B. Rodrigues, Lilian R. B. Mariutti, Ana Augusta O. Xavier, Adriana Z. Mercadante,
Department of Food Science, University of Campinas, São Paulo, Brazil
- P6-2 Marigold: much more than lutein esters.
Daniele B. Rodrigues, Adriana Z. Mercadante, Lilian R. B. Mariutti
Department of Food Science, University of Campinas, São Paulo, Brazil
