HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Citation: Lorvelec O, Berchel J, Barré N (2016) First report of the Flowerpot Blindsnake, *Indotyphlops braminus* (Daudin, 1803), from La Désirade (Guadeloupe, the French West Indies). *Caribbean Herpetology* 55:1–2.

We report, for the first time, the presence of the Flowerpot Blindsnake, *Indotyphlops braminus* (Daudin, 1803), on La Désirade (Guadeloupe Archipelago) in the Lesser Antilles. On July 2014, three individuals were found by one of us (JB) inside a pile of soil from earthworks near a house in an inhabited area southwest of the village of Baie-Mahault (16.3246, -61.0269, elevation 20 m). It is a typical situation for this species. Two of the snakes were collected and remained for a year in denatured alcohol before being preserved in 70% ethanol. Both have the same total length of 142 mm. The specimens have an unnaturally pale coloration for that normally dark species (Fig. 1).

Indotyphlops braminus is parthenogenetic and has a wide distribution, and may have originated in India (Hedges et al. 2014). Its introduction in the Lesser Antilles seems to be recent, with the first report from Anguilla (Censky & Hodge 1997). Since then, the species has been recorded from several other islands (Henderson & Breuil 2012, Powell et al. 2011, 2013), including the two main islands of Guadeloupe (Basse-Terre and Grande-Terre; Breuil & Ibéné 2008). Our report of *I. braminus* from La Désirade is also the first one for a surrounding island (islet) of Guadeloupe. The presence of the species should be investigated on the other islets of Guadeloupe.

Figure 1. Body (A) and head (B) of a preserved specimen of the Flowerpot Blindsnake, *Indotyphlops braminus*, from La Désirade (Guadeloupe Archipelago).

Acknowledgements

We thank S. Blair Hedges (Center for Biodiversity, Temple University, Philadelphia) for his assistance in the species identification, the Direction de l'Environnement, de l'Aménagement et du Logement de la Guadeloupe (DEAL Guadeloupe), especially Béatrice Galdi and Fabien Barthelat, for authorization to transport both specimens to

the USA, and the Association AEVA (Guadeloupe), especially Claudie Pavis, for having established a scientific partnership agreement between the Association AEVA and the Center for Biodiversity. We thank Thierry Frétey (Association RACINE, Rennes, France) for his assistance in literature search and review of the manuscript.
