HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

In addition, there is an error in the text, page 529, the last sentence of the second paragraph in Section 4.1.2, which should read as follows:

Nevertheless, the desirable but weak lipolysis observed in Swiss-type cheeses is mainly due to the ripening flora *Propionibacterium freudenreichii* rather than to the lipoprotein lipase being rapidly inactivated during heat treatment of cheese making (Dherbécourt et al. 2010).

Everything else in the paper remains correct.
