### About the Scientific Committees

Two independent non-food Scientific Committees provide the Commission with the scientific advice it needs when preparing policy and proposals relating to consumer safety, public health and the environment. The Committees also draw the Commission's attention to the new or emerging problems that may pose an actual or potential threat.

These Committees are the Scientific Committee on Consumer Safety (SCCS) and the Scientific Committee on Health, Environmental and Emerging Risks (SCHEER) and they are made up of scientists appointed in their personal capacity.

In addition, the Commission relies upon the work of the European Food Safety Authority (EFSA), the European Medicines Agency (EMA), the European Centre for Disease prevention and Control (ECDC) and the European Chemicals Agency (ECHA).

### SCCS

The Committee shall provide Opinions on questions concerning all types of health and safety risks (notably chemical, biological, mechanical and other physical risks) of non-food consumer products (for example: cosmetic products and their ingredients, toys, textiles, clothing, personal care and household products such as detergents, etc.) and services (for example: tattooing, artificial sun tanning, etc.).

### Scientific Committee members

## 1. BACKGROUND

The substance Basic Blue 99 (INCI) (CAS 68123-13-7) (COLIPA No C059) with the chemical name 3-[(4-amino-6-bromo-5,8-dihydro-1-hydroxy-8-imino-5-oxo-2-naphthalenyl)amino]-N,N,N-trimethyl benzenaminium chloride is a direct hair dye substance in hair dye formulations with a concentration on-head of maximum 1.0%.

Submission I and II for the hair dye Basic Blue 99 were transmitted in August 1992 and March 2006 respectively by COLIPA. Following Submission II, in September 2011 the Scientific Committee for Consumer Safety (SCCS) expressed concerns regarding the highly variable composition of Basic Blue of the analysed batches that made it impossible to conclude on the safety of the substance (SCCS/1437/11).

In reply to these scientific concerns, in July 2014 EFfCI provided new analytical data (Submission III) on the batches presented by COLIPA in the previous submissions and on other more recent batches. In September 2014, the SCCS concluded that:

*"Basic Blue 99 is a mixture of up to 40 substances of varying concentrations as demonstrated by the HPLC analysis of six batches (See Figures 1-3 and Tables 2, 3 and 5).*

*Due to the highly variable composition of Basic Blue 99 in six batches, the safety of Basic Blue 99 cannot be evaluated."* (SCCS/1537/14).

In April 2016, EFfCI submitted another dossier (Submission IV) containing new information on composition in an update of the analytical description of market quality and other data.

## 2. TERMS OF REFERENCE

(1) *In light of the new data provided, does the SCCS consider Basic Blue 99 (C059) safe as direct hair dye substance in hair dye formulations with a concentration on-head up to a maximum of 1.0%?*

(2) *Does the SCCS have any further scientific concerns with regard to the use of Basic Blue 99 (C059) in cosmetic products?*

### 3. OPINION

#### 3.1 Chemical and Physical Specifications

##### 3.1.1 Chemical identity

###### 3.1.1.1 Primary name and/or INCI name

Basic Blue 99

###### 3.1.1.2 Chemical names

Benzenaminium, 3-[(4-amino-6-bromo-5,8-dihydro-1-hydroxy-8-imino-5-oxo-2-naphthalenyl)amino]- N,N,N-trimethyl-, chloride (9CI)

3-[(4-amino-6-bromo-5,8-dihydro-1-hydroxy-8-imino-5-oxo-2-naphtyl)amino]-N,N,N-trimethylanilinium chloride (main component),

###### 3.1.1.3 Trade names and abbreviations

C059

Arianor Steel Blue

Jarocol Steel Blue

Basic Blue 99

C.I. 56059

###### 3.1.1.4 CAS / EC number

CAS: 68123-13-7

EC: 268-544-3

###### 3.1.1.5 Structural formula

3-[(4-amino-6-bromo-1-hydroxy-8-imino-5-oxo-5,8-dihydronaphthalen-2-yl)aminol-N,N,N-trimethylbenzenaminium chloride

###### 3.1.1.6 Empirical formula

Formula: C<sub>19</sub>H<sub>20</sub>BrN<sub>4</sub>O<sub>2</sub><sup>+</sup> x Cl<sup>-</sup> (main component)

##### 3.1.2 Physical form

Blue black, fine powder

**3.1.3 Molecular weight**

Molecular weight: 451.8 (as chloride), 416.3 (as cation)

**3.1.4 Purity, composition and substance codes**

See General comments to physico-chemical characterisation (below)

**3.1.5 Impurities / accompanying contaminants**

See General comments to physico-chemical characterisation (below)

**3.1.6 Solubility**

Water 10-100 g/L room temperature

Ethanol 1-10 g/L room temperature

DMSO 1-10 g/L room temperature

**3.1.7 Partition coefficient (Log P<sub>ow</sub>)**

Log Pow: 1.88 (calculated with Syracuse)

**3.1.8 Additional physical and chemical specifications**

Melting point: > 200 °C (thermal decomposition)

Boiling point: /

Flash point: /

Vapour pressure: /

Density: /

Viscosity: /

pKa: /

Refractive index: /

UV\_Vis spectrum (200-800 nm): /

**3.1.9 Homogeneity and Stability**

A freshly prepared sample of Basic Blue 99 batch 0107664 at 0.05 mg/ml in water was compared by HPLC-DAD with a sample stored 3 days at autosampler conditions (4°C). According to the main peak area, the sample was stable within a period of 3 days at 4°C, as a recovery of 99.6 % was found under the study conditions.

**General Comments to the physicochemical part**

The provided data and the SCCS comments according to Submissions I, II and III are summarised in Annexes I and II

## Opinion on Basic Blue 99 (C059)

### SCCS comment

Based on the provided chemical structures for the compounds 1 to 4, compounds 1, 2 and 3 have three isomers, while compound 4 has 6 isomers.

It is obvious from Table 2 that the composition of Basic Blue 99 varies from 58 to 70% from batch to batch. In addition, when compared with the previous batches, purity data for the batches RS 2798801 (50.2%), 125 (48.2%) and 140 (57.3%) and 107664 (67.8%) have been excluded from this Table by the Applicant.

The physicochemical properties and the biological activity of a chemical mixture will depend upon the composition of the mixture. The data on chemical analysis of six batches of Basic Blue 99 has demonstrated a highly variable composition of the material and has shown that it can be a mixture of up to 40 chemical analogues as well as several isomeric forms of some of them. Safety assessment will need toxicological data that are representative of the batch-to-batch variability.

### 3.2 Function and uses

Basic Blue 99 is used as a direct hair dye substance in hair dye formulations with a maximum on-head concentration of 1.0%.

### 3.3 Toxicological Evaluation

16 **3.3.13 Safety evaluation (including calculation of the MoS)**  
17

18  
19 **3.3.14 Discussion**  
20

21 The data provided as part of the submission has indicated that the material is not composed  
22 of a single substance, but of different substances and isomers. Analysis of different batches  
23 has shown that there is a large variation in the composition of the material intended for  
24 commercial use. Also, the toxicological data provided in the previous submission do not  
25 relate to the material specifications provided for the current assessment.  
26  
27

28 **4. CONCLUSION**  
29

30 *1. In light of the new data provided, does the SCCS consider Basic Blue 99 (C059) safe as*  
31 *direct hair dye substance in hair dye formulations with a concentration on-head up to a*  
32 *maximum of 1.0%?*

33 The SCCS cannot conclude on the safety of Basic Blue 99 (C059) because it is composed of  
34 several substances and isomeric forms, with a large variability between the composition of  
35 different batches. Also, the toxicological data provided in the previous submission do not  
36 relate to the material specifications provided for the current assessment. The safety  
37 assessment of Basic Blue 99 will require a clear well-defined set of specifications for the  
38 composition of the material intended to be used in cosmetic products as well as supporting  
39 toxicological data relating to a representative composition.

40 *2. Does the SCCS have any further scientific concerns with regard to the use of Basic Blue*  
41 *99 (C059) in cosmetic products?*

42 /  
43

44 **5. MINORITY OPINION**  
45

<b>Table 2:</b> Distribution of major components (and their isomers) of Basic Blue 99 in the batches RS2798801 and 74/75, deduced from Table 1																																																																																																																																																																											

## Opinion on Basic Blue 99 (C059)

Batch RS2798801			Batch 74/75		
Component/Name	Peak No. of all isomers	Area percent of all isomers	Component/Name	Peak No. of all isomers	Area percent of all isomers
D3	6	36.7%	D3	11	49.3%
D4	12, 17, 19	$4.0+15.4+6.7 = 26.1\%$	D4	19, 21	$2.6+10.9 = 13.5\%$
D5	8, 10, 16	$0.3+0.5+3.0 = 3.8\%$	D5	20	1.3%
T2	7, 11, 15	$0.3+4.2+1.3 = 5.8\%$	T2	14	1.6%
T3	13, 14	$1.8+4.2 = 6.0\%$	T3	16, 18	$1.8+10.9 = 12.7\%$
T5	21, 24, 28	$1.2+6.3+0.6 = 8.1\%$	T5	22	1.4%

**SCCS general comments on Purity:** Basic Blue 99 is a mixture of 23-32 substances of varying concentrations as demonstrated by the HPLC analysis of two batches RS2798801 and 74/75 (Table 1). The SCCS is not convinced that all components of Basic Blue 99 (batches RS2798801 and 74/75) are adequately characterised by NMR and IR. The SCCS considers that the chemical characterisation of individual components of Basic Blue 99 (batches RS2798801 and 74/75) based on LC/MS analysis (UV-Vis spectrum and 1-4 molecular ions) is a poor chemical characterisation. The HPLC peak area of the major component of Basic Blue 99 in the two batches (batches RS2798801 and 74/75) 36% and 49% (Tables 1 & 2), is significantly different from each other. The HPLC peak areas of other components of Basic Blue 99, characterised by the study authors, are also very different (Tables 1&2) in the two batches. In addition, the LC/MS characterisation of the Basic Blue 99 according to the study authors revealed that the isomeric composition of individual components of the two batches is also different (Tables 1 & 2).

## Opinion on Basic Blue 99 (C059)

**ANNEX II: Basic Blue 99 Submission III (2014):** Summary on the physico-chemical characterisation (provided data and SCCS comments)**Provided data on Purity**

Basic Blue 99 is a sum of 3 isomers with 3-[(4-amino-6-bromo-5,8-dihydro-1-hydroxy-8-imino-5-oxo-2-naphthyl)amino]-N,N,N trimethylanilinium chloride as main isomer, according to <sup>1</sup>H-NMR. Purity (% HPLC): >48 area-% (Table 1)

**Table 1:** Analytical description of Batches used in Toxicity studies or actual market materials

ID	Structure	MW	Peak no.	Range (area%)	74/75 (area-%)	RS27988101 (area-%)	125 (area-%)	140 (area-%)	106106 (area-%)	107664 (area-%)
Main		415 / 417	10, 13, 14	>48	62.8	50.2	48.2	57.3	64.1	67.8

**Provided data on Subsidiary Colours:** Members of an isomer set whose total percentage area (area-%) is greater than 1.0% at 500-700 nm and are considered to contribute to the desired blue coloration of hair have been classified as Subsidiary Colours (Table 2)

**Table 2:** Subsidiary colours

ID	Structure	MW	Peak no.	Range (area%)	74/75 (area-%)	RS27988101 (area-%)	125 (area-%)	140 (area-%)	106106 (area-%)	107664 (area-%)
F		416 / 418	15, 16, 23, 24, 25, 26, 27, 28	≤26.5	8.4	16.9	26.0	19.6	7.0	7.3
E		493 / 495 / 497	18, 20, 22	≤15	11.8	14.6	4.4	5.5	7.4	10.8
A		337	1, 5	≤9.5	1.7	---	9.3	3.7	1.6	0.9
J		417 / 419	30	≤6.0	4.1	4.8	2.0	3.4	5.4	5.8
L		423-429	39, 40	≤5.0	2.60	1.3	1.7	1.5	4.4	4.3
B		418	4, 11	≤4.0	1.80	2.0	2.8	2.2	3.8	---
G		494 / 496 / 498	31, 32, 34	≤3.0	2.10	2.8	1.2	0.8	2.7	2.0
O		417	3	≤3.0	1.0	---	2.0	2.6	---	---
N		496 / 498	12	≤2.5	0.7	2.1	0.3	---	---	---
X		449 / 451 / 453	21	≤1.7	---	1.7	---	---	---	---
M		495 / 497	7	≤1.6	0.9	---	---	1.3	---	---

Identity was verified for each batch by UV and IR spectroscopy. Before marketing of Basic Blue 99, sodium chloride and/or saccharose are usually added to the neat dye in order to adjust the colour strength to a certain predefined value.

## Opinion on Basic Blue 99 (C059)

**Impurity:** organic impurities are presented in Table 3. Members of an isomer set lacking one or both of the criteria mentioned in the purity section above

<b>Table 3:</b> Organic impurities of Basic Blue 99										
ID	Structure	MW	Peak no.	Range (area %)	74/75 (area-%)	RS27988101 (area-%)	125 (area-%)	140 (area-%)	106106 (area-%)	107664 (area-%)
P		451	6	≤1.3	---	---	1.3	0.2	0.6	--
C		338	8	≤1.2	0.4	0.6	---	1.2	0.2	0.5
K		430 / 432	29	≤0.9	0.9	---	---	0.4	---	---
Q		352	17	≤0.5	0.2	0.5	0.1	---	0.2	---
---	Not known	?	38	≤1.4	1.4	---	---	---	0.6	0.5
---	Not known	-	37	≤0.9	--	0.9	---	---	0.3	---

**Inorganic impurities :** Pb <20 ppm ; Sb and Ni <10 ppm; As and Cd <5 ppm; Hg <1 ppm

**Purity Based on major components:** The purity of Basic Blue 99 based on major components (≥5% HPLC peak area) can be reported as described in Table 4.

<b>Table 4</b> Purity of Basic Blue 99 (main component + subsidiary colours)			
Basic Blue 99 component	No. of isomers	%HPLC peak area (Range)	Isomer composition *
Main component	3	48.0 - 67.8	Not known
F	8	7.0 - 26.5	Not known
E	3	4.4 – 15.0	Not known
A	2	0.0 – 9.5	Not known
J	1	2.0 - 6.0	Not known
L	2	1.3 – 5.0	Not known

\*It is clear from Table 2 that isomeric composition of various components may also vary from batch to batch

**SCCS comments:** It is obvious from Table 5 that composition of Basic Blue 99 varies significantly from batch to batch.

The physico-chemical properties as well as biological activity of a mixture will depend upon the composition of the mixture. As the six batches of Basic Blue 99 were demonstrated to be a mixture of up to 40 substances of varying composition (and varying isomeric composition), the safety of such a mixture cannot be assessed.
