INTERNATIONAL ENERGY TRENDS (1)

3RD QUARTER 1977 AND RECENT TRENDS

1. PRIMARY ENERGY CONSUMPTION

First 3 Quarters 1977

For the first three quarters of 1977 energy consumption in OECD countries was 2.7% higher than for the same period in 1976. During the same period industrial production rose by 4.5% and gross domestic product by 4.0%. Thus energy growth remained low in relation to economic activity. This was the case particularly in Europe (0.6% in energy and 2.0% in GDP) and in Japan (3.6% in energy and 6.5% in GDP).

In the OECD area coal consumption rose by 1.2% and oil consumption by 3.7%.

In the United States, as in 1976, oil consumption grew more quickly than total energy demand (9% oil, 4.5% energy).

In Europe (EEC) modest growth of total energy requirements (+0.6%) reflected low growth of GDP (+2.0%). Industrial energy demand was particularly weak (total heavy fuel oil -7%, total coal -3.0%). Reductions occurred in oil consumption (-2.6% against +6.5% in 1976) and in coal consumption (-3% against +7.4%). Electricity demand grew 2% and natural gas consumption rose 1.6%.

In Japan oil consumption increased 6.7% and gas consumption 19.3%.

(1) Table of contents on page 8

Latest Trends

Oil consumption data available for fourth quarter 1977 show that for the U.S. and Japan the full yearly change 1977/76 will be between 5 and 7%. The European 1977/76 change will be between -2.0 and -2.5%.

Preliminary data for the fourth quarter suggest that in the U.S. the yearly change in coal and natural gas consumption will be about +2.0% and -2.0% respectively.

In Europe the 1977/76 increase in consumption of non-oil energy will be about 3.0%.

Based on the above elements, one arrives at an estimated growth rate for 1977 OECD energy consumption of 1.7% (U.S. 3.0%, Japan 2.0%, Europe 0.2%).

DOMESTIC PRODUCTION AND STOCKS

1. First 3 Quarters 1977

Domestic energy production in the OECD area has risen by 2.3% over the same period last year (compared with the 2.7% growth in consumption) and has improved compared with its 1.1% increase in 1976/77 reflecting mainly gains in nuclear electricity.

Nuclear electricity generation in the OECD area rose by 26%, giving an increase in its share in total electricity generation to about 10%.

Oil production was 1.7% above the first three quarters of 1976, compared with the 1976/75 growth rate of 0.2%.

In the U.S. the absolute increase in coal production was somewhat larger than the decrease in European coal production (Germany).

The important gains in U.S. nuclear electricity (+40%) and coal (+3.5%) were offset by losses in natural gas (-1%) and hydro-electricity (-28%) due to drought conditions in the Far West. The gains in nuclear and coal followed increases in these sources of 11% and 10% respectively in 1976. The hydro result represented a further drop in rather low output levels in 1976.

In Europe, the 2% increase in total electricity generation was more than covered by additional nuclear (+22%) and hydro-electricity (+62%). Output from thermal stations diminished by 3%. Hydro-electricity recovered from the 1976 drought.

In Japan, nuclear electricity generation fluctuated sharply during the period, and there was a sharp drop in hydro-electricity.

Latest Trends

Alaskan and North Sea crude oil output in the fourth quarter shows no significant increase over third quarter levels.

The 1977/76 increase in production of all energy sources is likely to be 1% or less, due largely to a large increase in fourth quarter 1976.

Nuclear electricity production is still subject to very sharp quarterly fluctuations reflecting plant availability. The U.S. and Germany, which had relatively strong 1977/76 increases over the first three quarters experienced substantial drops in the seasonally adjusted third quarter figures.

STOCK LEVELS AND CHANGES

First 3 Quarters 1977 and Latest Trend

OECD oil stock levels (in seasonally adjusted terms) have been increasing up to and beyond the end of the third quarter. Since summer 1977 this movement reflects U.S. stock building. From fourth quarter 1976 to third quarter 1977 oil stocks added amounted to 4.5% of OECD annual oil consumption. During the calendar year of 1976 the additions had been less than 0.5% of oil consumption, which nevertheless had risen more than this year. At the end of the third quarter of 1977, oil stock levels were 5.5% above the level of the same period last year, and 26% above the third quarter levels of 1974. Over this latter period, oil consumption has only risen by 6%.

In the case of coal, too, stockbuilding was higher than in 1976, while consumption increased less. This suggests that in recent quarters, as in the case of oil, a substantial part of coal stocks have been built involuntarily as a result of weak demand.

NET IMPORTS

First 3 Quarters

Given the major oil stockbuilding, net oil imports rose rapidly in spite of static consumption and growth of domestic production.

U.S. net imports (+28%) contribute heavily to the overall OECD growth of net oil imports (+6.3%). European net oil imports actually declined (-8%) considerably more than consumption (-2.6%). This is explained by a more than doubling of domestic production which, moreover, permitted a stronger stockbuild than in the 1975/76 period.

Latest Trends

Second and third quarter net oil imports were well below the record levels of early 1977. Fourth quarter volumes show another drop.

Hence the 1977/76 change will be less than the 6.3% for the first three quarters. The fourth quarter drop was particularly marked in the U.S., while Europe's fourth quarter net imports, owing to the present volume of North Sea production, tend to stabilise on the record low levels of first quarter 1975.

ENERGY PRICES

Energy Prices for Households in First 3 Quarters 1977

Since second quarter 1977, OECD energy prices for households have increased much less than in previous periods. This reflects mainly the weakening of oil prices in domestic currencies. Given continued price increases for other goods and services, relative energy prices fell back to 1975 levels during the period in the OECD as a whole. In the U.S. they remained stable, due in part to the continued increase of oil import prices in dollar terms.

Oil Prices

Import prices (\$Cif) of crude oil landed up to November 1977 in major OECD countries have continued on the mild upward trend established mid-1977. Given the appreciation of several

major currencies against the dollar, however, there was an actual drop in November in the weighted average price of imported crude oil in national currencies. Preliminary data suggests that this trend continued into December and January.

Product prices for final consumers have weakened even more than import prices, reflecting distress selling of surplus products.

U.K.	5.2	4.2	5.3	4.2	7.6	7.6	7.6
5-EUROPEANS	6.9	5.3	7.1	5.3	4.2	4.2	4.2
ALL-7	3.0	2.2	3.0	2.2	1.8	1.8	1.8

E. AVERAGE TAX RATES ON ABCVE PRODUCTS

	1975	1976	75M03	76M03	77M03	77M08	77M09
U.S.	17.2	17.0	16.7	16.8	15.5	15.5	15.5
JAPAN	20.5	21.9	20.4	23.4	23.2	23.1	23.3
FRANCE	43.8	42.0	44.4	41.2	42.6	42.7	42.5
GERMANY	47.7	45.8	47.6	45.6	46.4	46.5	46.4
ITALY	38.3	37.5	38.3	37.0	36.3	36.3	36.3
NETHERLANDS	42.6	41.0	42.2	40.6	41.0	41.0	41.0
U.K.	38.3	37.0	38.7	38.1	36.3	36.3	36.3
5-EUROPEANS	43.4	41.9	43.6	41.8	41.9	42.0	41.9
ALL-7	34.0	29.0	29.4	28.9	28.6	28.6	28.6

-GRAPH 7 - RELATIVE ENERGY PRICES FOR HOUSEHOLDS (1)

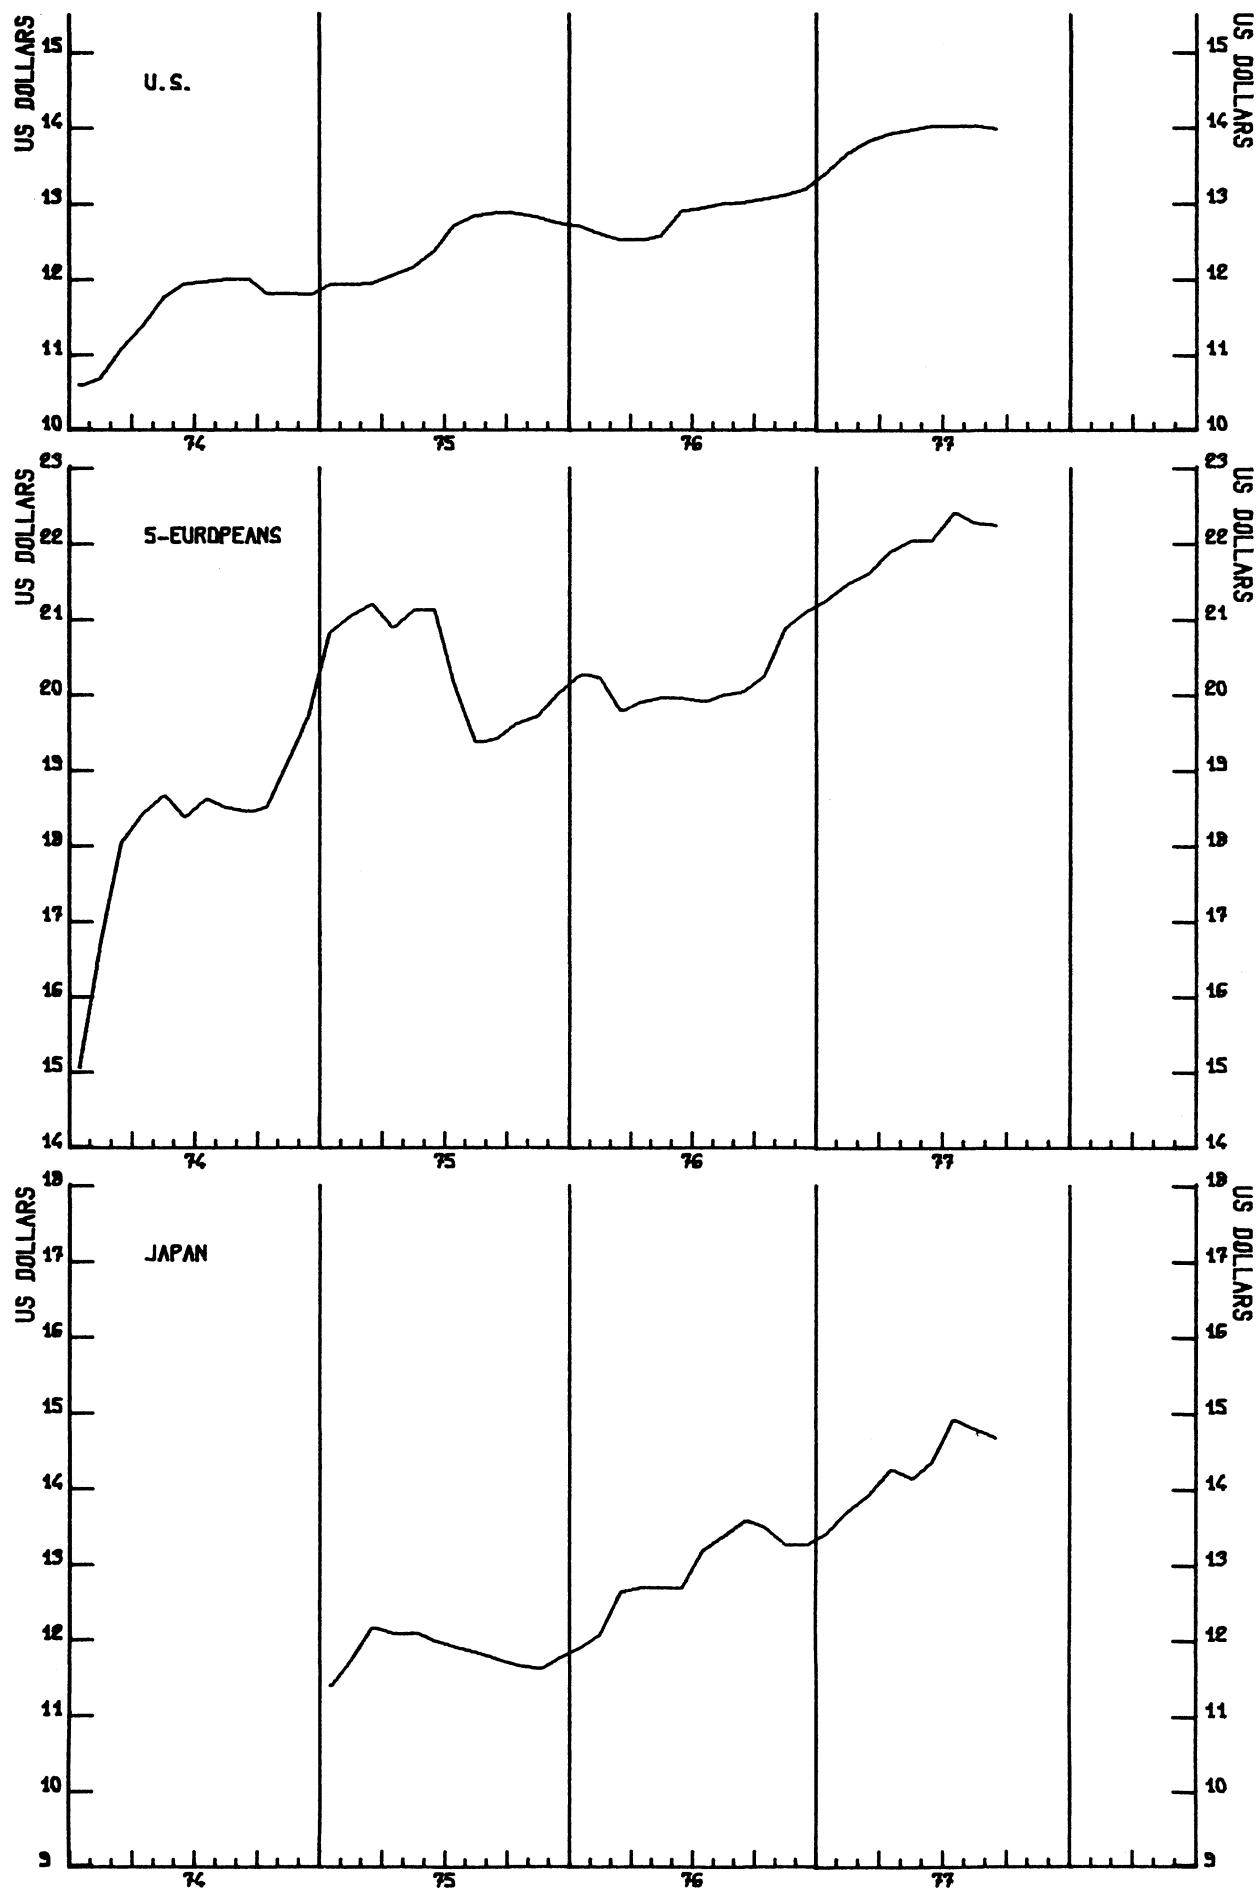

(1) INDEX OF ENERGY PRICE (1970=100)
RELATIVE TO GENERAL PRICE (1970=100) FOR HOUSEHOLDS

-GRAPH 8 - CRUDE OIL IMPORT PRICES, IN US DOLLARS

-GRAPH 9 - AGGREGATE PRODUCT PRICES, IN US DOLLARS

TECHNICAL NOTES

1. Data on Primary Energy Supply

Basic data for oil are being collected with an OECD/IEA quarterly questionnaire with standard definitions for various flows and products.

Basic data on non-oil energy sources are regularly abstracted from national publications. As far as possible, and, if necessary, they are being adjusted to meet standard definitions as used in the OECD-IEA publication, "Energy Statistics".

2. Data on Energy Prices

Relative energy prices for households are based on official consumer price indices and their energy component (fuel and electricity). Average crude oil import prices are derived from published customs statistics by dividing the value (in national currency) of crude oil imported in a given period by the corresponding volume. For conversion into U.S. dollars, official IMF exchange rates are used.

Absolute prices and tax components for different oil products are abstracted from various publications and standardised to common units. (See table on next page).

PRICE DEFINITIONS FOR PRODUCT PRICES

	Motor gasoline	Gas/Diesel oil	Heating oil	Heavy fuel oil
U.S.	At service stations	No. 2 diesel fuel, at service stations	No. 2 heating oil, dealer's selling price	No. 6, more than 1% sulphur Retail
JAPAN	Tokyo Retail prices	Retail prices	Tokyo Retail prices	Wholesale price
FRANCE	Paris Retail price	Paris Retail price	Paris To consumer's tank in 20/50hl lots	Paris In tank car lots
GERMANY	From survey for consumer price index	Retail price	From survey for consumer price index 50hl lots	From survey for industrial price index
ITALY	Retail price	Retail price	Heating kerosene ex coastal refinery	3.5% sulphur ex coastal refinery
NETHERLANDS	Lowest zone Retail price	Retail price	Lowest zone to consumer's tank in 10hl lots	3500 sec 300 ton-lots Barge ex refinery
U.K.	Retail price	Retail price	Inner zone Bulk wholesale price	Inner zone Heavy Bulk wholesale price Drop size 2750 gal.
