HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

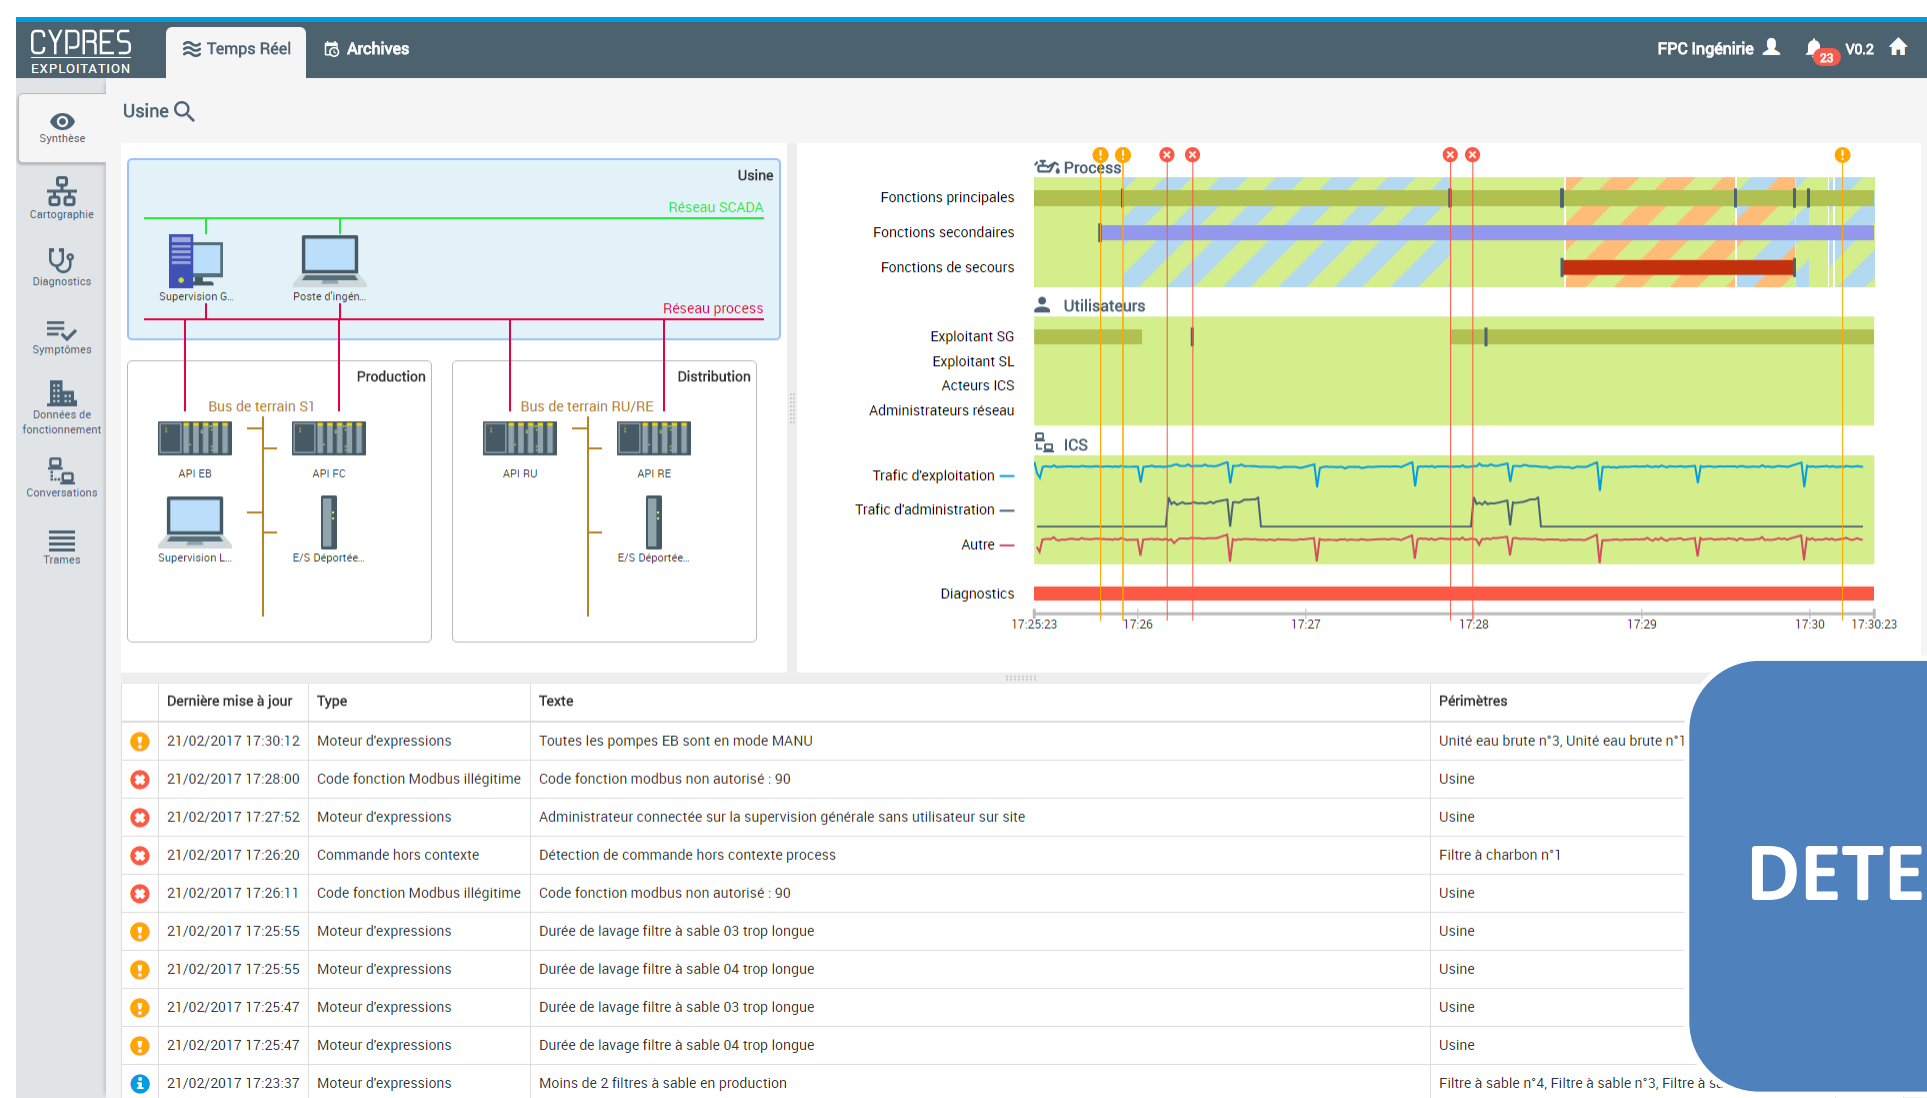

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

SODA-IloT4Factory: Blockchain to keep the A.I. of your Intrusion Detection System up-to-date

Frédéric Planchon, Fernand Costa, Vincent Nicaise and Nabil Bouzerna

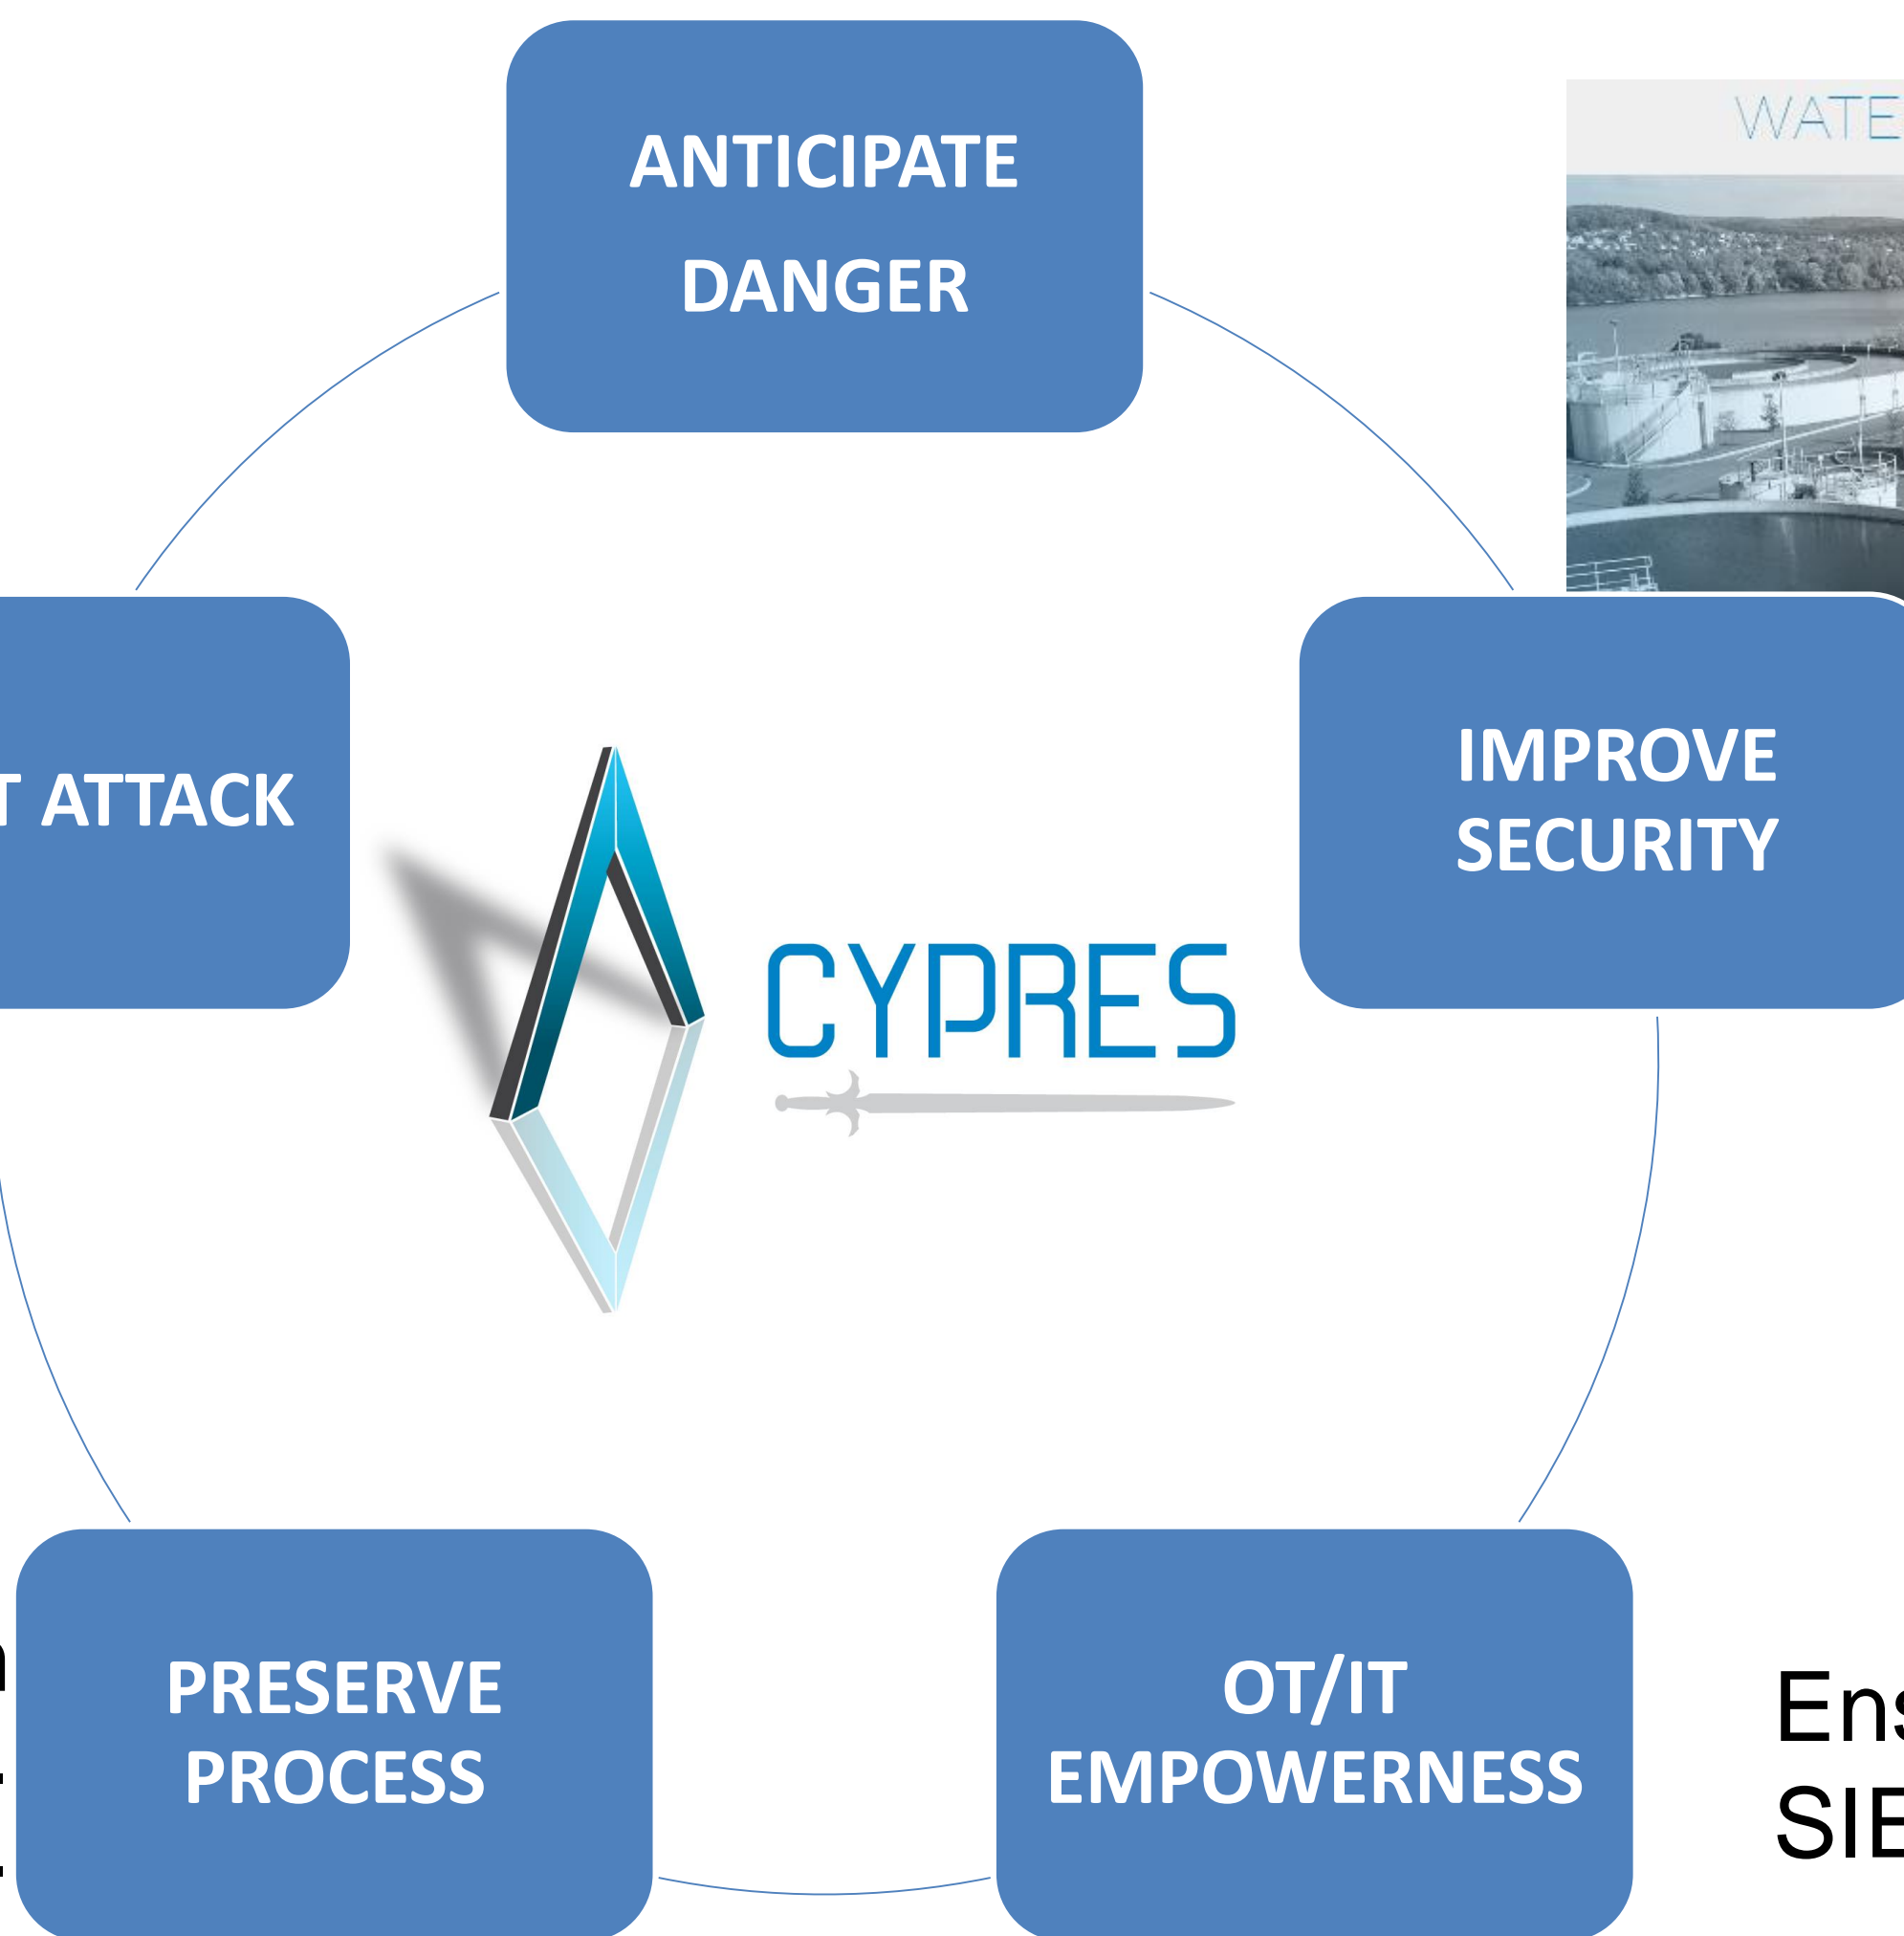

CyPRES is an **intelligent IDS** that strengthens industrial information systems. It **learns** then verifies the operation and **behaviour of the system** to the lowest level of detail. It **detects the first signs of attacks** before damage is incurred.

Avoid production downtime or the deterioration of facilities by monitoring the activity of the industrial network and anticipating the risks associated with abnormal behaviour.

Alert immediately of any intrusion or cyber attack and intervene in order to ensure continuity of service of the facilities.

Listen to all communications that pass through the ICS without disrupting the control system. CyPRES is a non-intrusive solution.

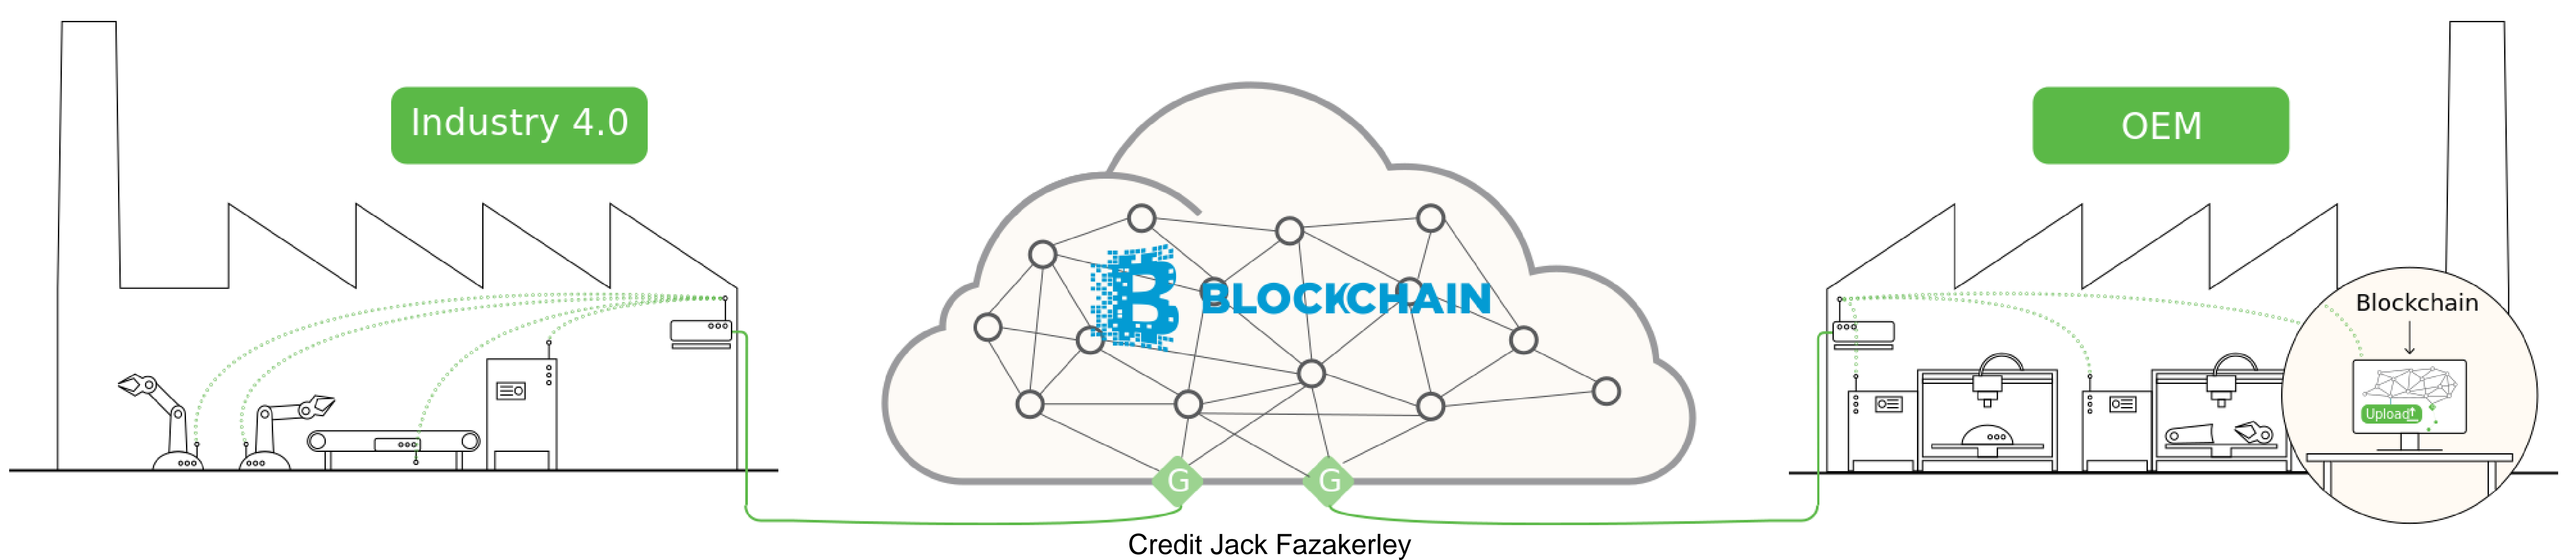

Analyse logged data to identify the root cause of an anomaly or an attack and implement appropriate security measures.

Ensure OT/IT empowerment by raising alerts to a SIEM for a SOC exploitation.

- Discover, monitor and map de network and its equipment
- Detect unknown threats through continuous behaviour analysis
- Monitor the functional activity of the process
- Find the origin of an attack by a post-incident analysis

Co-designed with FPC Ingénierie, SODA-IloT4Factory offers a secure way to update CyPRES rule engines & cyber security/attack models.

Secured **On-the-pouce** **Decentralized** **Architecture** for the **Industrial Internet of Things (SODA-IloT)**, co-designed by IRT SystemX, CEA Tech List and Airbus Innovation Group, features innovative solutions to manage IloT access rights management & secure software and firmware updates through **Blockchain technology & cryptographic signatures**.

The **SODA-IloT4Factory** demonstrator is built on top of the **CHES** platform (Cybersecurity **H**ardening **E**nvironment for **S**ystems of **S**ystems), an experimental and technical cybersecurity platform funded by **ANSSI** to support cybersecurity research effort at Institute for Technological Research SystemX - Paris-Saclay (EIC R&D project).

This platform is part of French Government “Nouvelle France Industrielle”, Cybersecurity plan, action 8: set up one or more testing and demonstration cybersecurity platforms.
