HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers. L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

SHERPAM

Sensors for Health Recording and Physical Activity Monitoring

- LTSI INSERM 1090
- CASA IRISA UMR 6074
- M2S CACHAN UR2 LAUREPS - CRPCC, EA 1285
- CIC 1414

OBJECTIVES

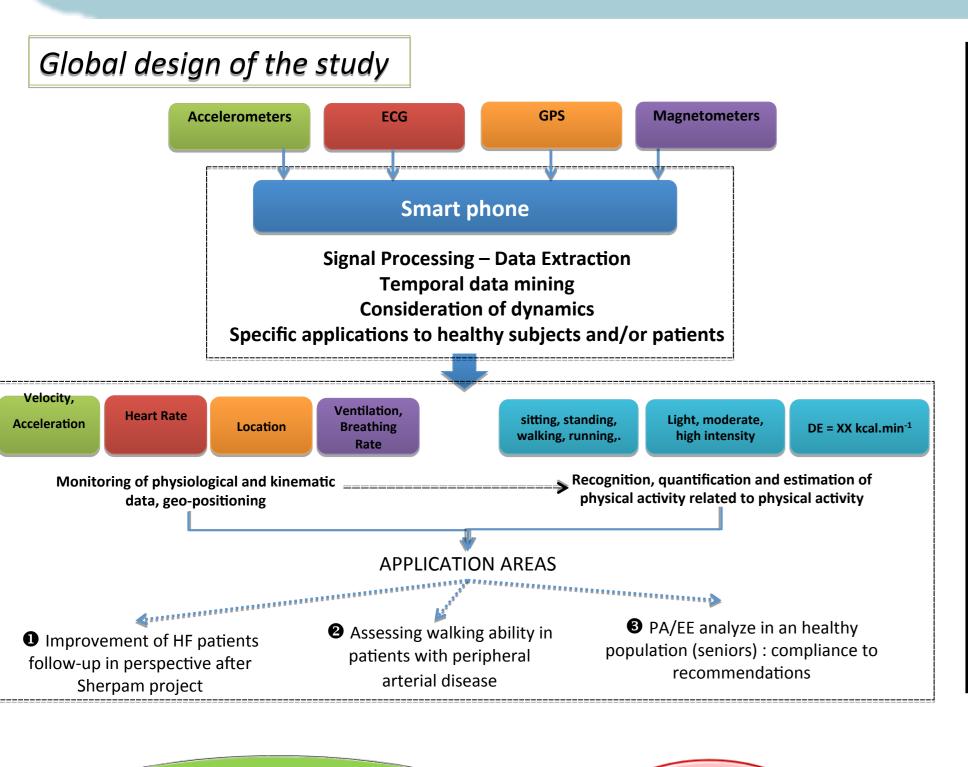

Conceive, implement, and validate experimentally devices allowing biophysical

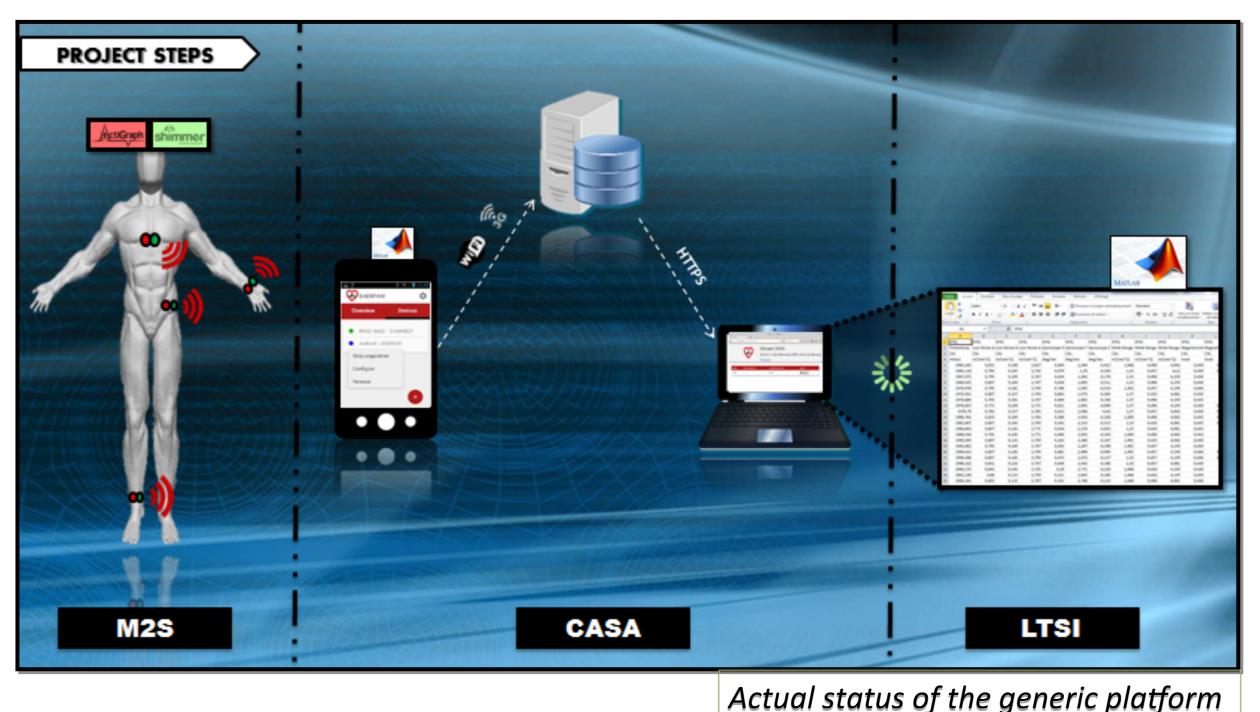

data of mobile subjects to be gathered and exploited in a continuous flow.

Focused application domains:

- Heart failure patient's monitoring (HF).
- Outdoor assessment of functional limitations and community-based walking programs for rehabilitation in patients with peripheral artery disease.
- Physical activity recognition and energy expenditure estimation,

GENERAL ARCHITECTURE OF THE PROJECT

Preliminary Results Signal Processing Duration Speed: 20 Km/h

MAIN RESULTS

and Research Papers

MEMSENSE

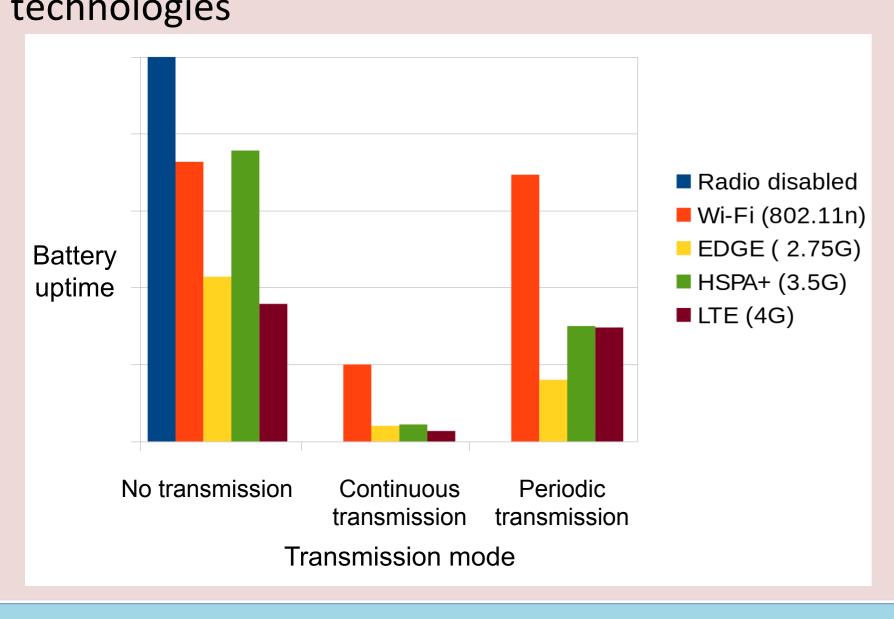

IRISA-CASA

1) An open platform dedicated to mobile monitoring built around four criteria:

Disponible

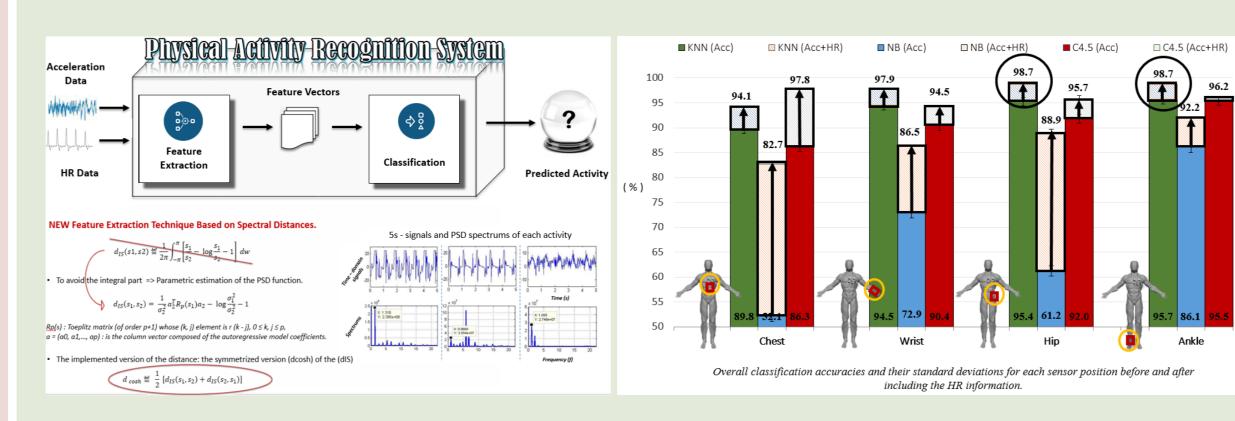

au labo M2S

- Versatility: to accommodate to a large variety of off-the-shelf sensors
- Extensibility: to add new sensors and embedded processing easily
- Confidentiality: to ensure the privacy and the non-disclosure of the data
- Dependability: to work everywhere by limiting the energy consumption (EC) and by provding a resilience to network disruption
- 1) A plugin approach for both sensors and embedded algorithms to personalize the platform for each patient and his/her condition
- 2) Evaluation of EC of various transmission technologies

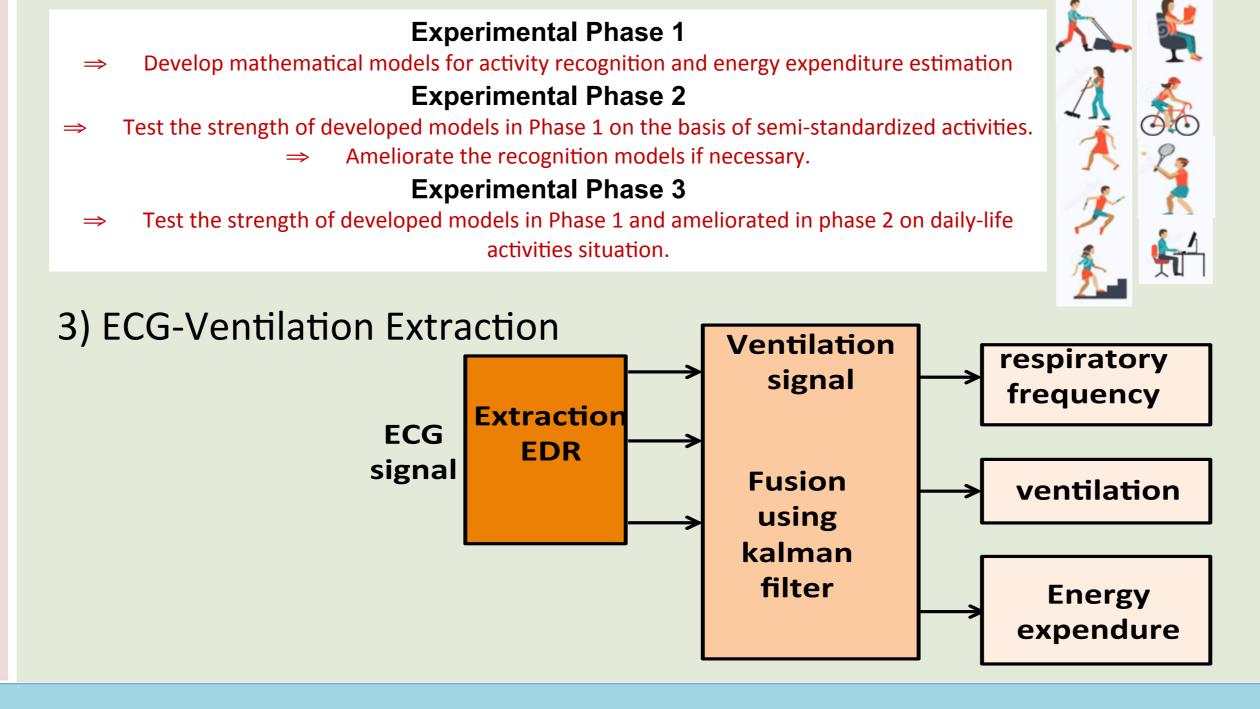

LTSI/M2S

1) Develop signal processing tools to: Recognize and classify five ambulatory and sedentary activities (cycling, walking, running, sitting, car-riding) using heart rate and acceleration data fusion.

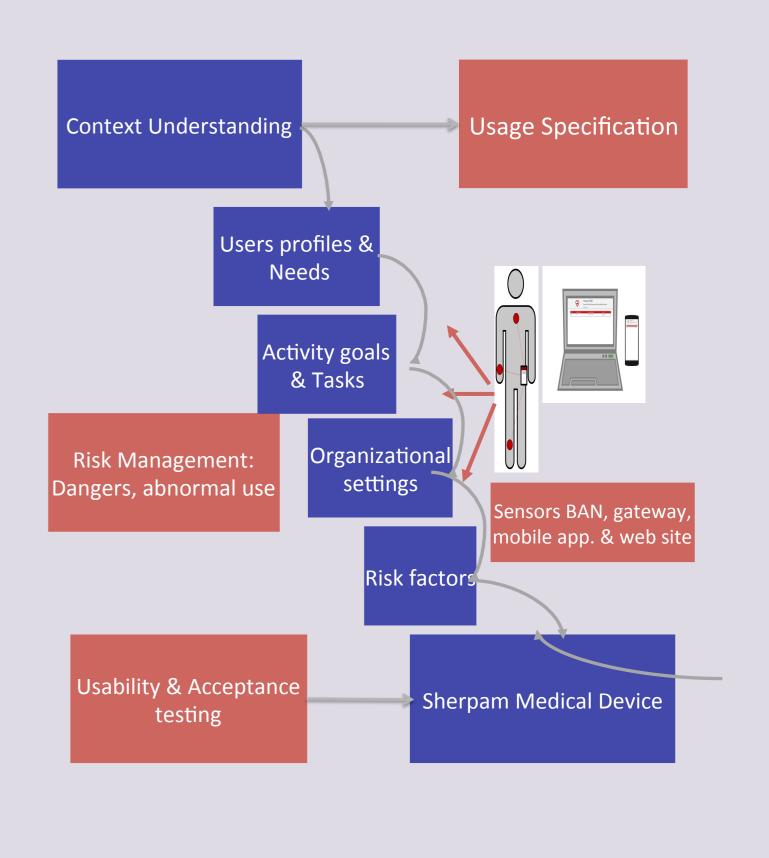

2) Develop a new experimental protocol for daily-life activities recognition and energy expenditure estimation:

LAUREPS-CIC-IT

- 1) Context of Sherpam use understanding
- 2) User's profiles and requirements
- 3) Authentication of primary functions and risks of sensors/gateway/mobile app. /web site use
- Review wearable sensor acceptance and usability
