HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Geoarchaeological results on the Northern Peruvian coast: environmental changes and societal responses in the Sechura Desert during the last two millennia

GEOGRAPHICAL SETTING

Various coastal configurations:
small bays and vast depressions

Erg Los Perritos

Nunura Bay

Arid and
desertic conditions

Constraining and
changing environments
→ Evolution in the past?
→ Controlling factors?
→ Geographical disparities?

Archaeozoological evidences

Las Salinas-Bayovar-01

37 000 otoliths = warm water species: *Micropogonias altipinnis*, *Albula* sp.

Active fishery
489-697 AD
↓
651-766 AD

ADAPTED SOCIETAL RESPONSES

Continuous settlement of the western part of the Desert with perennial and opportunist sites

PALAEOLAGOON RECONSTRUCTIONS

Radiocarbon datings

- Datings on «live position» shells
- Calculation of a local reservoir effect $\Delta R = -12 \pm 36$ years
- Correlations with archaeological ages

SUMMARY OF RESULTS

During the 1st millennium AD...

1. coastal environments different than today's ones → contrasts between vast lagoon and small lagoon >> variations of hydrosedimentary dynamics in specific palaeoclimatic context (wetter, ENSO events)
2. adaptations of prehispanic populations → highest variability of resources (ENSO) in Las Salinas >> opportunist settlement → Perennial geosystems in Nunura Bay >> long and continuous cultural chronology

Morpho-sedimentary evidences

Palaeoenvironmental evidences

$\delta^{18}\text{O}$ (‰) on shells

P9 low	-1,107
P2	-0,750
P6	-0,560
P5 low	-0,451
P10	-0,307
P20	-0,161
P14	-0,083
P22 low	0,051
P22 top	0,075
P5 top	1,651
