

In recent years, storage has come to the fore as a central aspect of ancient economies. However, studies have hitherto focused on urban and military storage. Although archaeological excavations of rural granaries are numerous, their evidence has yet to be fully taken into account. Such is the ambition of *Rural Granaries in Northern Gaul (Sixth Century BCE – Fourth Century CE)*.

Focusing on northern Gaul, this volume starts by discussing at length the possibility of quantifying storage capacities and, through them, agrarian production. Building on this first part, the second half of the book sketches the evolution of rural storage in Gaul from the Iron Age to Late Antiquity, firmly setting archaeological evidence in the historical context of the Roman Empire.

**Stéphane Martin**, Ph.D. (2013), École Pratique des Hautes Études, is associate researcher at the Université de Poitiers, EA 3811 HeRMA. His research focuses on the history and archaeology of Gaul between the Iron Age and the Roman period.
