Plan

- 1. Introduction
- 2. What's CapiTainS?
- 3. Expanding the user base from a software point of view
- 4. What's documentation ?
- 5. Organizing Workshops : for whom and for what ?
- 6. Conclusion

What's Capitains ?

- = Software Suite + Guidelines
- Not specific to any institution
 - But built thanks to them !
- Partial and separate answers to
 - Editing
 - Serving
 - Curating
 - Reading
- Bootstrapping development of project
- Born in the context of
 - Perseus
 - Perseids
 - Humboldt Chair of Digital Humanities

What's Capitains

- Guidelines
 - Metadata + TEI or Epidoc
- Sparrow
 - Javascript
 - Old and needs to be rebuilt to have better quality software
- MyCapytain
 - = "Standard" library for CapiTainS
 - = Kind of lego set for Capitains
- HookTest
 - Testing corpora (locally or decentralized)
- Nemo
 - Reading Interface Skeleton
- Nautilus
 - API Generator

Expanding the user base from a software point of view

Parantas Paartas Paartas

- What can we do to support a wider variety of textual data ?
- What are our limitations ?

CTS and its limitation as an API and a data model

- Identifiers and metadata scheme
- Amount of texts
- Reliability of responses across
 implementations

How we actually repeated our errors

- MyCapytain 1.0.0 > 2.0.0
 - Data model = Distributed Text Services
 - Underlying hardcoded models
 - Remainings of CTS dependency
- MyCapytain 2.0.0 > 3.0.0
 - Data model ~ DTS
 - Open Public Discussions (Issue 165)

What's documentation ? What we did wrong

- Focused on developer documentation
- Some technical explanations about the why
- Still, difficulties to catch up :
 - a. Code base starting to be large
 - Naming convention can be as efficient as difficult
 - b. Focusing on tutorials and python notebooks would have been better ?

Legend : Which Capitains software should I use again ?

What's documentation ? What we should have done

- Priorities : making the most useful packages easier to pick up
- Tutorials
 - https://github.com/Capitains/tutorial-nemo
- Nemo Template App
 - <u>https://github.com/capitains/nemo-template</u> <u>-app</u>

imgur.com/a/GB2zAOo

Organizing workshops : Whom for ? What for ?

- Lot of workshops held in Europe + USA
- User base = Original Institutions + New Institutions of former members of the original institutions
- So what did we do wrong ?

Capitains trainer facing the results of years of workshops

Organizing workshops : Past Results

- Focused mainly on data production
- But what's the point if you do not have a website ?

Munich, Antikensammlungen J 1493, d'après LIMC, s. v. Sisyphos n° 6. http://books.openedition.org/pupo/1834

Organizing workshops : Target software ?

- Hooktest ?
- MyCapytain ?
- Nemo / Nautilus ?

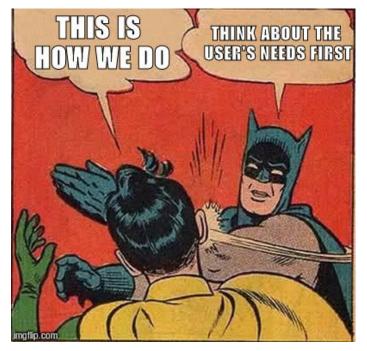

Organizing workshops : Nemo

- Make using Nemo simpler
- Reduce or take into account skills required before your own software
 - Reevaluate after each training !
- Think about the technical needs
 - We all hate windows but some users will have it. Try to prevent being surprised.
- Train to hack, not to know.

Title : Our Wake Up Call (Capitains does not promote violence against fellow open source programmers) https://imgflip.com/i/2bt3or

Organizing Workshops : The future

- People should leave with real knowledge
- Workshops
 - Intensive and in person
 - 6/8 trainees per trainer
- Try to have a simpler version of Nemo, the simplest possible

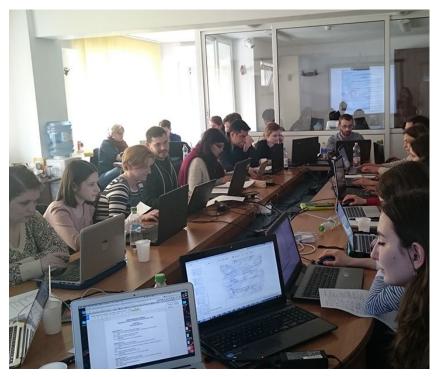

It should be as simple and as complex as this. It's not a perfect plane, but it still is one

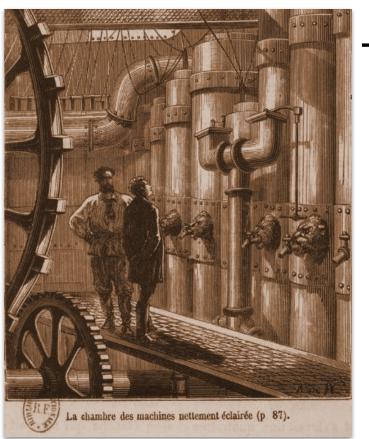

Conclusion

- Regular call for feedback
 - For code
 - For improving accessibility
 - <u>https://github.com/Capitains/MyCapytain/issues/14</u> <u>9</u>
- Limit the concentration of power and knowledge
 - Build a real community of discoverers, users and developers knowing that there is a large spectrum in between these categories
 - Make things clearer !

Cluj-Napoca, Romania, March 28–April 1, 2016 (photo S. Stoyanova)

Thanks!
