HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
3D HSS Consortium

Creation, scientific use and archiving of 3D data for Humanities and Social Sciences

Presentation
The 3D Consortium, accredited in 2014 by Huma-Num, brings together eleven partners working in the field of archaeology and cultural heritage and who already have experience of using 3D technologies and producing 3D models in the scientific context of Humanities and Social Sciences.

From 2014 to 2017, the 3D Consortium’s activities and research results focused on the elaboration of a 3D glossary, open source tools development (archiving software and 3D viewer) and also production of a white paper which analyses the requirements for 3D in HSS.

For the next four years (2018-2021), the 3D consortium will focus on developing synergies between all HSS disciplines to promote transversal approaches and increase the connection with international networks working on the same field.

Deliverables 2014-2017

- **3D portal**
  Catalog of 3D models produced in a scientific context in Humanities and Social Sciences.
  [http://portail3d.huma-num.fr](http://portail3d.huma-num.fr)

- **White Paper**
  Practical guidance to the long-term archiving 3D project, 3D software inventory, 3D glossary, specifications required for a project with 3D models of Cultural Heritage.
  [https://hal.archives-ouvertes.fr/hal-01683842](https://hal.archives-ouvertes.fr/hal-01683842)

- **Archive software**
  Archive generation from a 3D project, suitable with the archiving service of CRHES (National Computing Center for Higher Education).
  [http://d3lab.huma-num.fr](http://d3lab.huma-num.fr)

- **3D viewer**
  An open source software for archiving Cultural Heritage with an easy navigation to visualise, manipulate and annotate 3D models.

Research aim 2018-2021

**Technology – R&D**
- Inventory of 3D production (hardwares, softwares, methodology)
- Identification and development of solutions for the data analysis, visualization and archiving.
- Organization of Workshops about semantic enrichment, integration of multiple scales of representation, and virtual reality/mixed reality.

**Development and transfer of knowledges**
- Identify heuristic contributions related to the use of 3D in Humanities and Social Sciences.
- How do 3D acquisition tools and 3D data restitution generate new scientific discoveries?
- What is the impact of 3D in the comprehension of studied objects?
- What is the impact of 3D on data preservation?

**Data Lifecycle and Interoperability**
- This axe will focus on different aspects of data management and data life cycle.
- Proposing metadata set to structure 3D models.
- Commissioning of the 3D Conservatory, managing 3D data of Humanities and Social Sciences.
- Thinking about the status and property rights of the digital object.

**Humanities and Social Sciences meeting**
- 3D HSS meeting to develop synergies between all humanities and social sciences disciplines to promote transversal approach and increase the connection with international networks.
- Extension of 3D Consortium partnership to other HSS communities (geographers, linguists, visual artists, musicologists, urban planners, educational scientists, psychologists, etc.).
