

ANISOTROPY OF THE MULLINS EFFECT IN PARTICLE-REINFORCED SILICONE RUBBER

G. Machado, G. Chagnon , D. Favier

*Université de Grenoble/CNRS, Laboratoire Sols-Solides-Structures-Risques (3SR), BP 53, 38041
Grenoble Cedex 9, France*

- ⇒ Characterize and understand the mechanical behavior of a filled silicone (RTV3428).
- ⇒ Focus on the strain-induced anisotropy by studying the influence of loading direction history on the *Mullins* effect.
