**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

⇒ Replace the randomness of position measurement by randomness of position preparation

Quantiles = de Broglie-Bohm Trajectories

Quantiles = Branches of Everett interpretation

$$v(x, t) = \frac{\nabla S(x, t)}{m} \quad \text{with} \quad \Psi(x, t) = \sqrt{\rho(x, t)} e^{i\frac{S(x, t)}{\hbar}}$$

Each trajectory = One world of the many-worlds interpretation

The wave function guides the particle.
