**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Biodiversity conservation in agricultural landscapes: statistical analysis method to understand media representation of policies and species

## Julie Delclaux

ISARA-Lyon, 23 rue Jean-Baldassinni, 69007 Lyon, France  
 Laboratoire d'Etudes Rurales (LER) - Université Lumière - Lyon 2, France

### Research Objective

- Agricultural landscapes are the place of difficult trade-offs between conservation and production objectives
- The media contribute to public opinion and have an agenda-setting function (*McCombs and Shaw, 1972*)
- Understanding the media representation of policies and species could improve biodiversity conservation strategies (*Jacobson and al., 2012*)
- We sought to analyze topical content on newspaper coverage and the effect of time with a reproducible statistical method

### Content Analysis Method

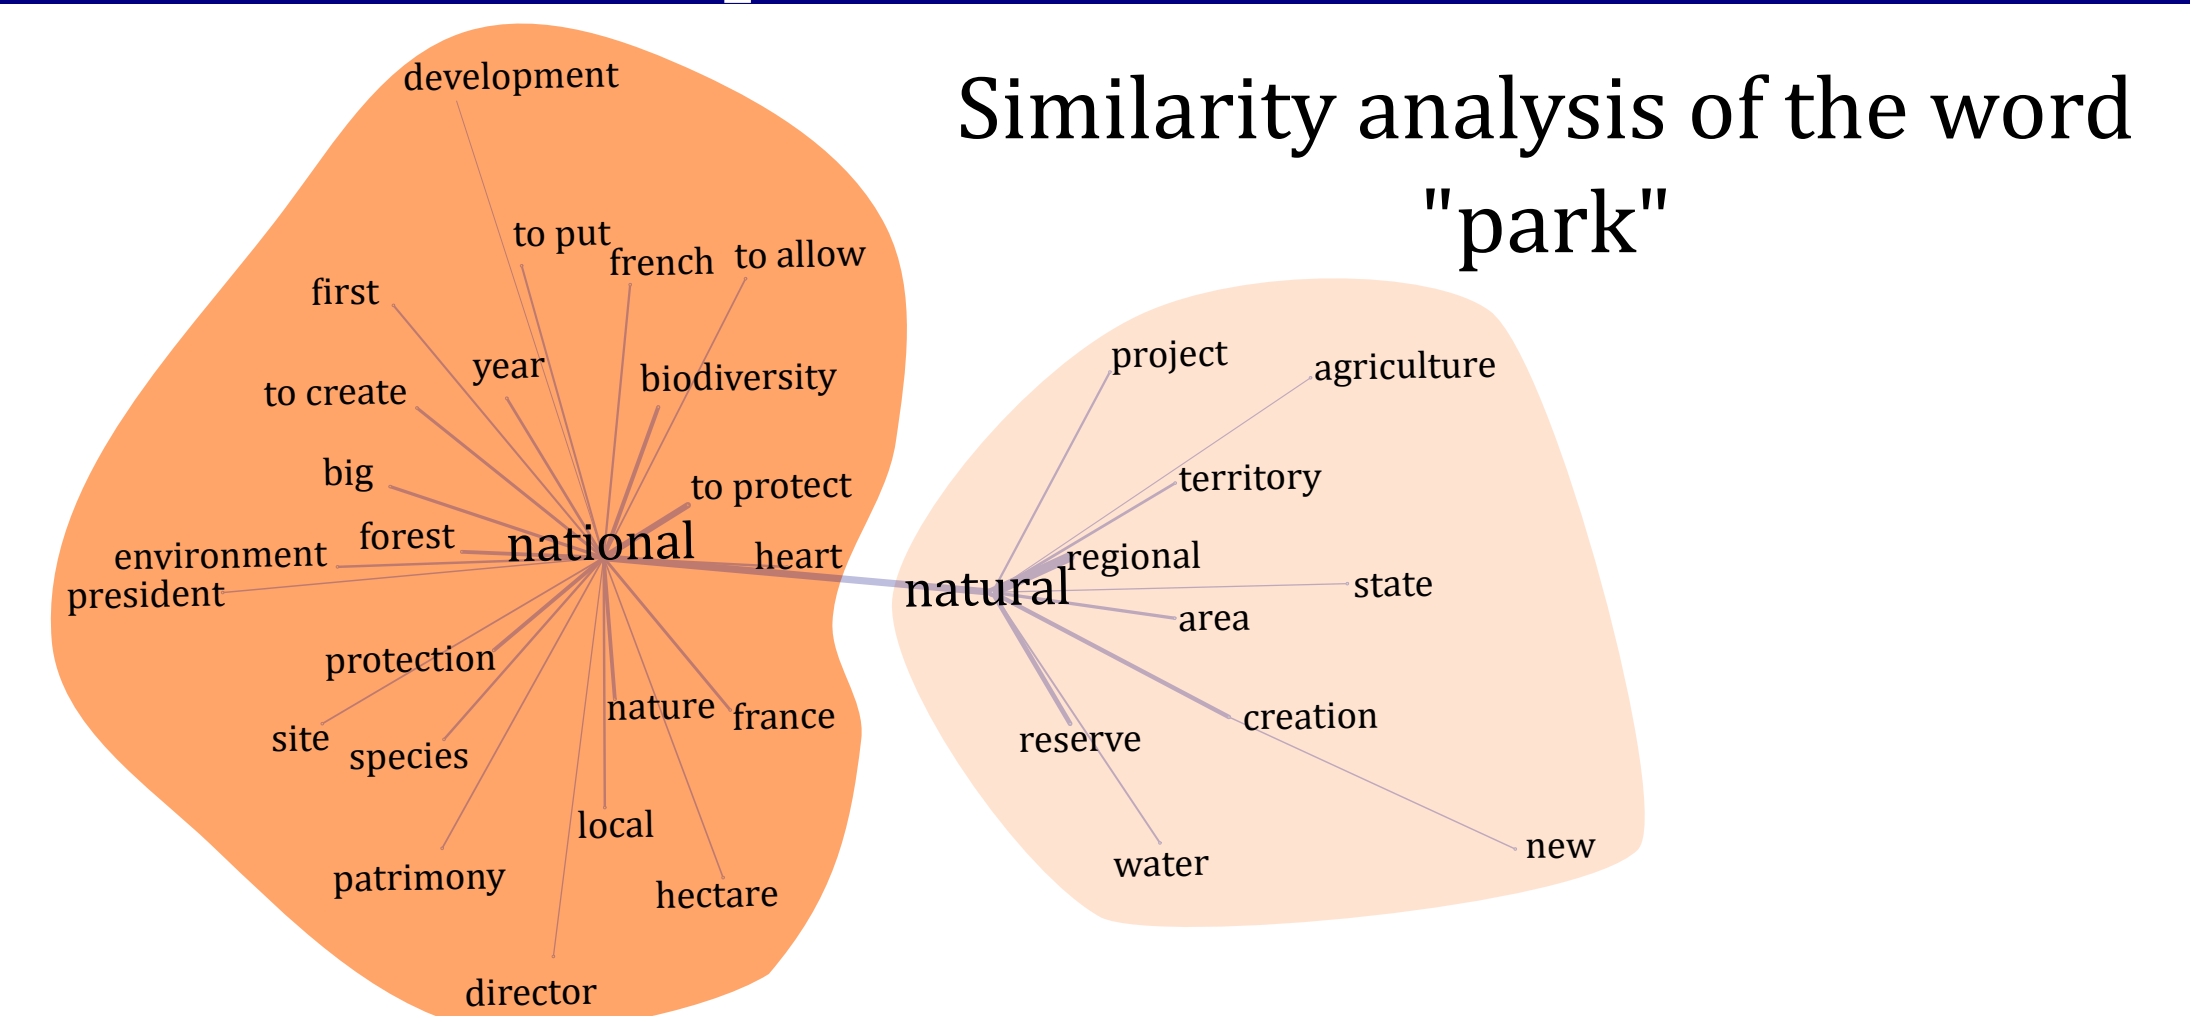

#### Data

- 2547 articles from 7 national French daily newspapers (*Le Monde, Libération, La Croix, Les Echos, Le Figaro, L'Humanité, La Tribune*) containing "agriculture" or "farmer" and "biodiversity" from 1999 to 2017 (Europresse database)

#### Method

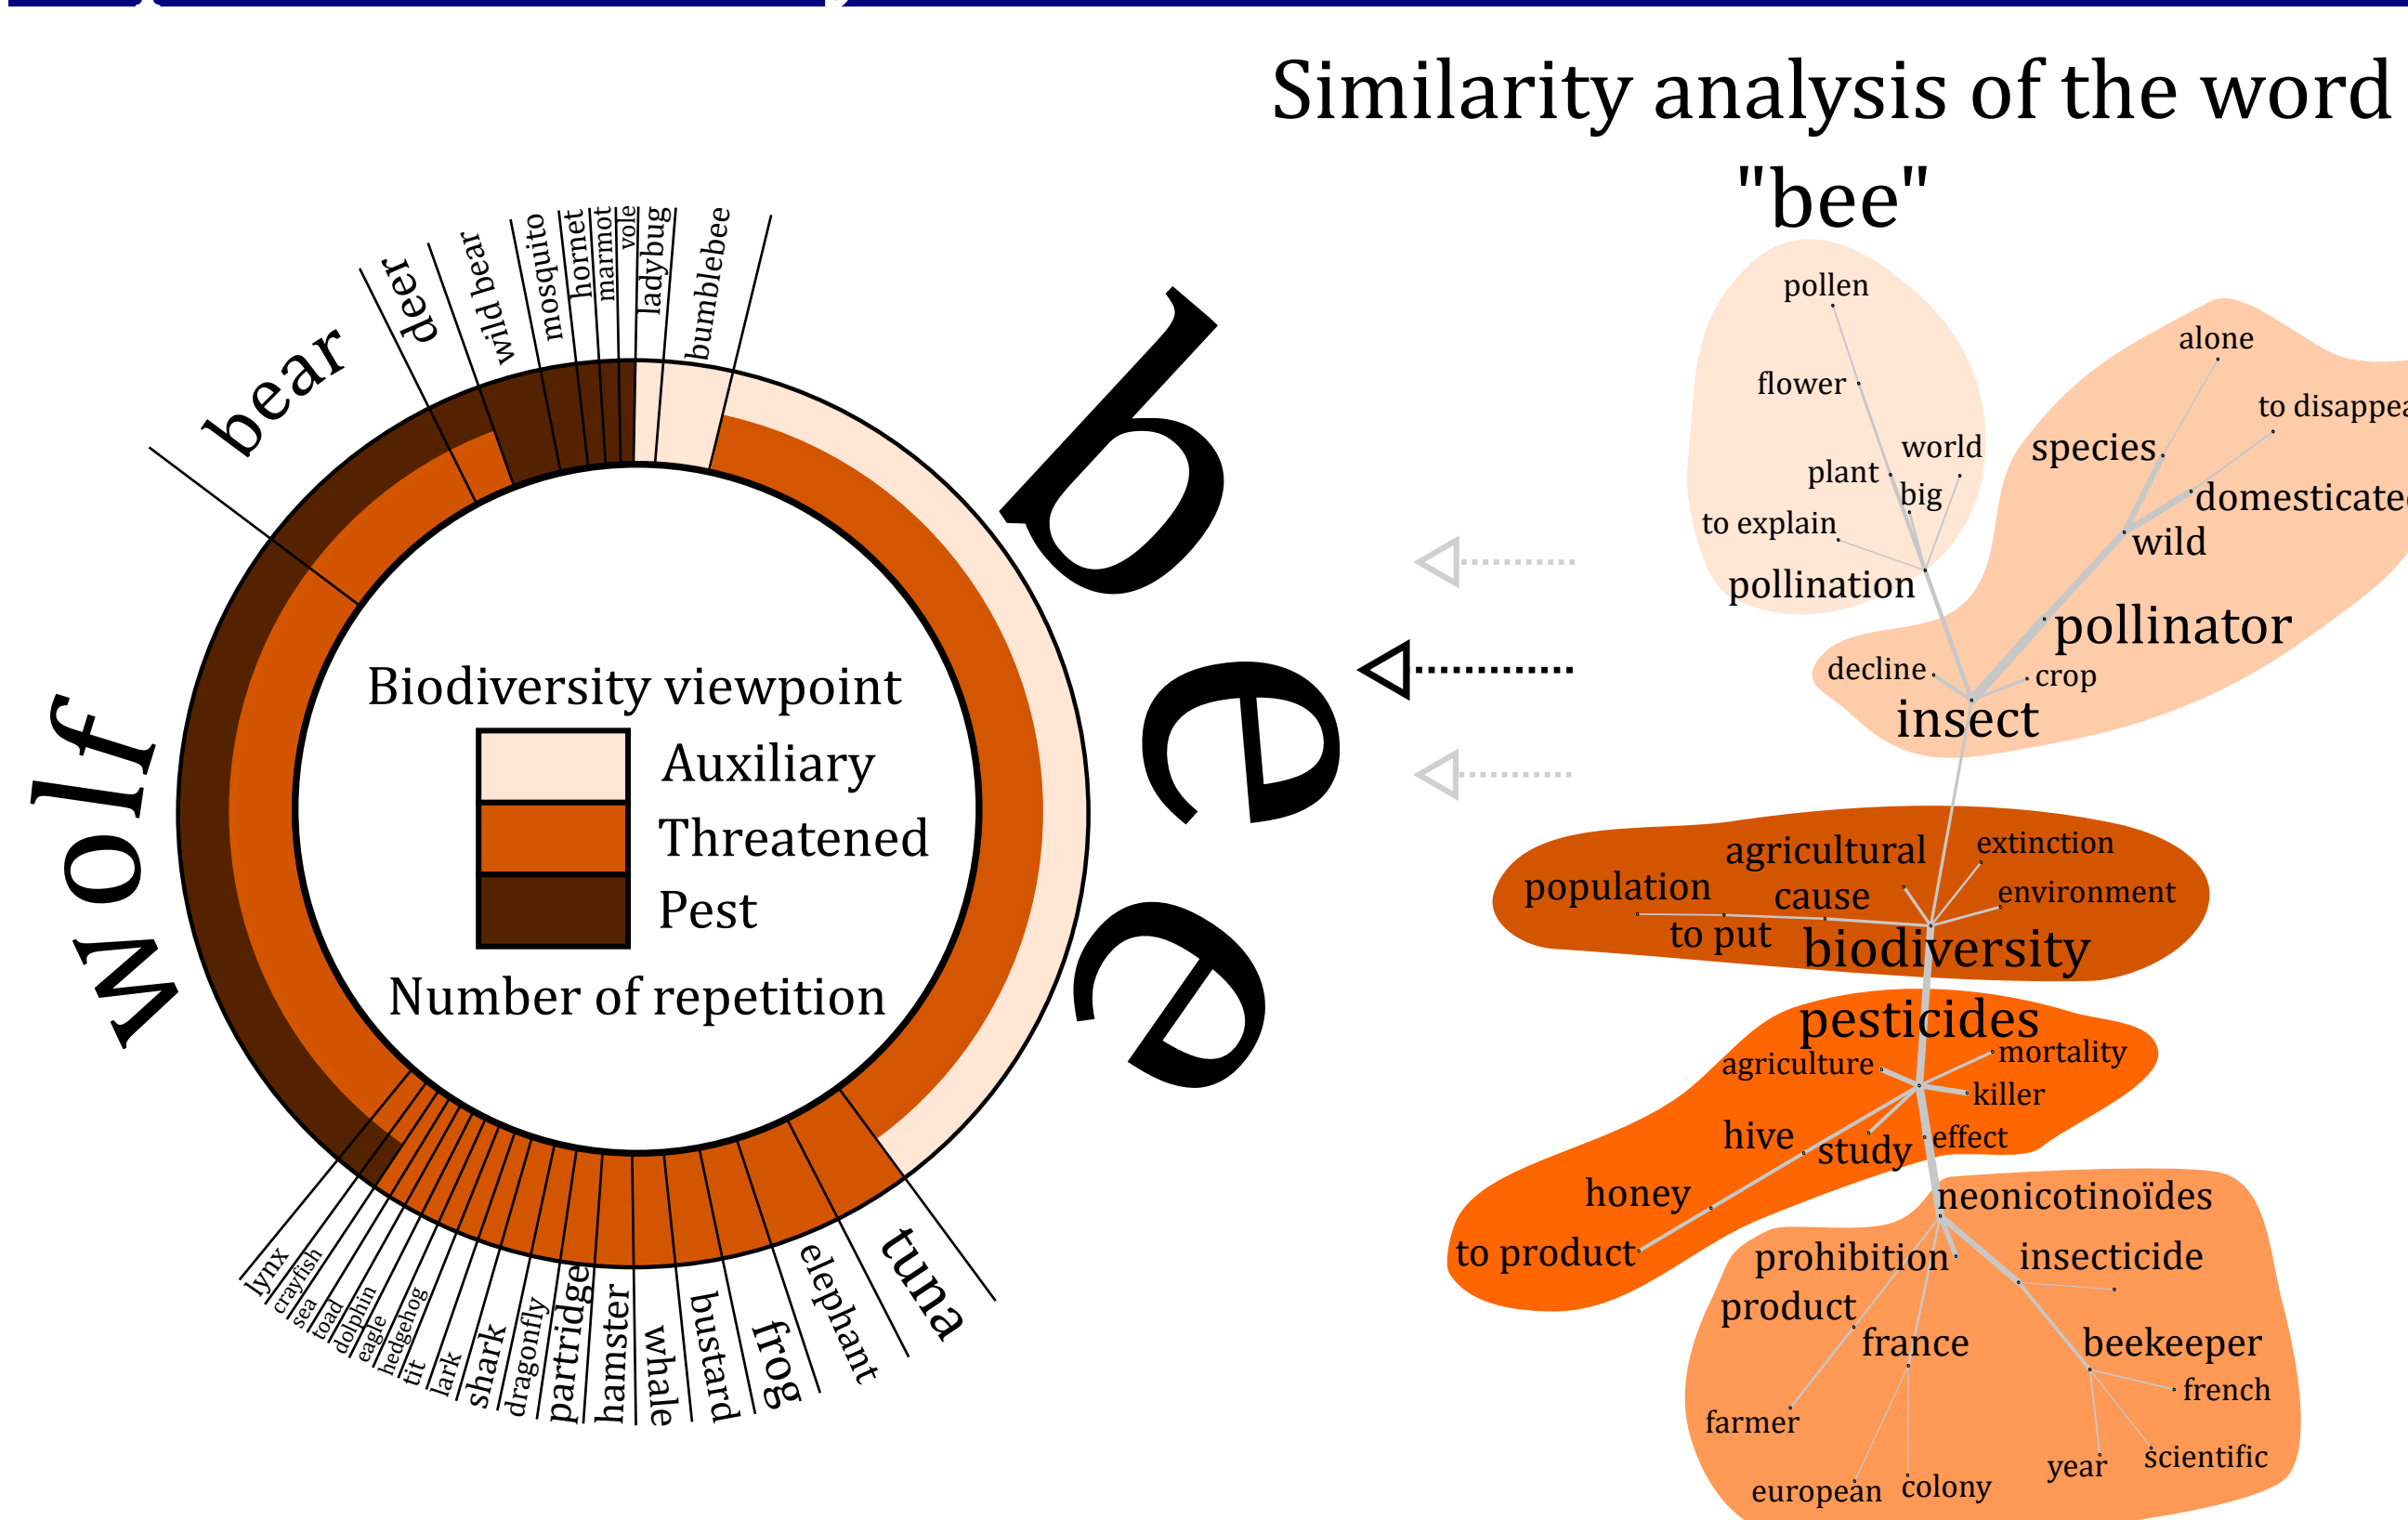

- Content analysis with an interface of R: Iramuteq (*Ratinaud and Déjean, 2009*)
  - Correspondant analysis on covariate "year"
  - Similarity analysis with co-occurrence index on sentence segments

### Policies Media Representation

- Regional nature park discusses more of human dimensions than national park

### Species Portrayal

- Bee (*Apis mellifera*), wolf (*Canis lupus*) and bear (*Ursus arctos*) are the most mentioned species
- Bee is associated with ecosystem services while wolf and bear are threatened but also pests

### Time Effect on Topical Content

- Political events are the major factors of the media coverage
- Articles move from an ecocentric viewpoint to an anthropocentric viewpoint

### Conclusion

- Species have opposite valences and some biodiversity policies are mentioned in synergy with agriculture
- Topic content changes over time under political impulses and the viewpoint of articles becomes anthropocentric
- Textual analysis allows to analyze finely the content, the valence and the time trends but not the sources of the articles (scientific papers, interviews...)
