

# Use-wear analysis of the Capsian lithic industry of Kef Zoura D (Algeria): preliminary results.

*Analyse fonctionnelle de l'industrie lithique capsienne de Kef Zoura D (Algérie) : résultats préliminaires.*

Bernard Gassin, Juan F. Gibaja, Mary Jackes, David Lubell.

Diffusion of lithic industries with large regular blades, trapezes and notched blades.

Maps from Perrin 2009 and 2012

industries with large regular blades, trapezes and notched blades

Limit of Neolithic expansion

Dates cal BC

Hypothesis Perrin et alii 2009

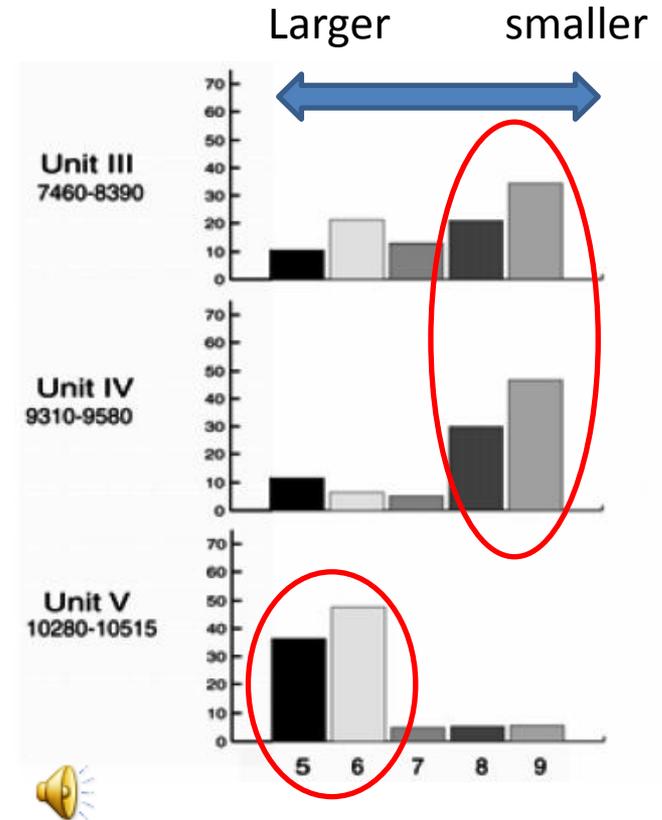

Hypothesis Belhouchet, Mulazzani and Pelegrin 2014

Research Program  
MeNeMoia :  
*From Mesolithic to Neolithic in Western Mediterranean : the African impact*  
Dir. T. Perrin

# From Capsien typique to Capsien supérieur : are changes in the tool kit responses to changes in environmental conditions ?

	Lithic industries	fauna	climate
Capsien supérieur	Bladelets : pressure Backed blades and bladelets, triangles and trapezes Notched blades	Smaller game More lagomorphs	drier
8200 calBP event			
Capsien typique	Blades : direct percussion Backed blades and bladelets, triangles, segments, burins	Large game hartebeest, zebra and aurochs	moister

Kef Zoura D fauna  
Jackes and Lubell 2008

5 *Bos primigenius* & *Equus mauritanicus* 6 *Alcelaphus buselaphus* / medium bovid

7 *Ammotragus lervia* 8 *Gazella* / small bovid 9 *Lepus* & *Oryctolagus*

Excavations D. Lubell and  
M. Jackes – 1972-1978

# Kef Zoura D stratigraphy

T 20-5

5 metres

Land snails

Main trench, east face

Units I-III : Capsien supérieur

Unit IV : Capsien typique ?

Unit V : Capsien Typique

# Use-wear analysis (B. Gassin, J. F. Gibaja)

Units	Culture	tools	Number (sample)
III	Capsien supérieur	Backed bladelets, geometrics, notched blade(let)s, burins, ...	214
IV-V	Capsien typique	Backed bladelets, geometrics, notched blade(let)s, burins, scrapers, ...	140

Total lithic industry : 55 000 artefacts

Sample	methods
Geometrics, backed blades and bladelets N = 210	Mainly low power
Other tools N = 144	Low and high power

variability

Backed blades and geometrics

variability

Notched blades

increase

burins

decrease

Capsien typique

time

Capsien supérieur

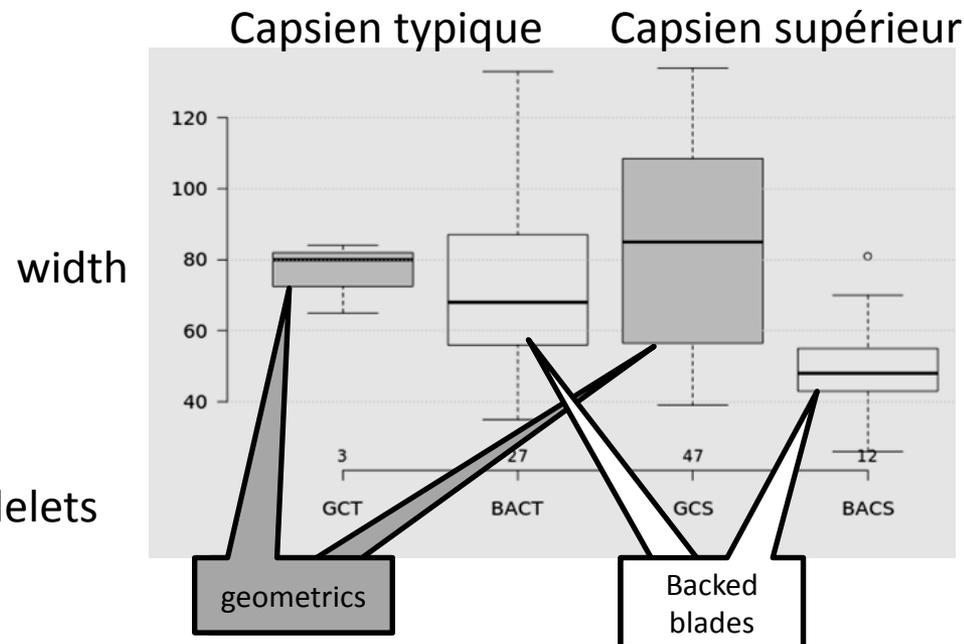

# Results

<b>Unit III</b>	<b>In situ, very good preservation</b>
Unit V	Partially in situ, good preservation Partially altered, lag deposits

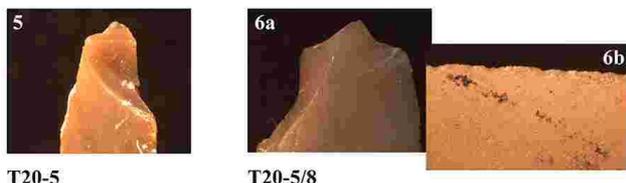

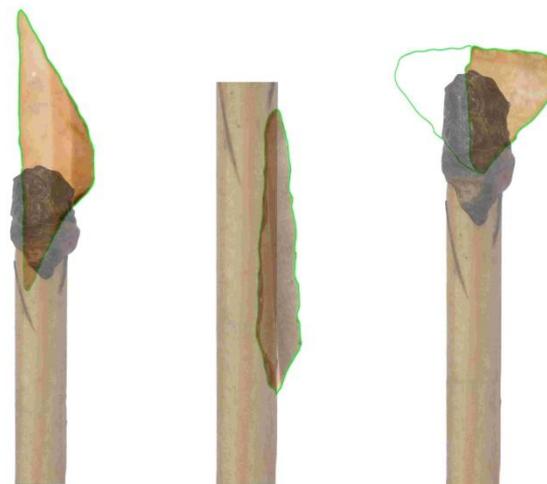

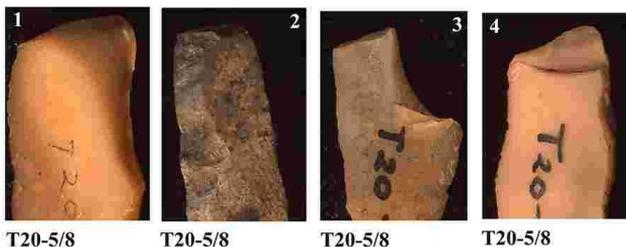

# Backed blades and bladelets ; geometrics

	Backed blades and bladelets	geometrics
Capsien supérieur	30 mainly fragments with undetermined typology	118: 32 trapezes, 72 triangles, undetermined fragments
Capsien typique	56 mainly fragments with undetermined typology	6 (segments, triangles)

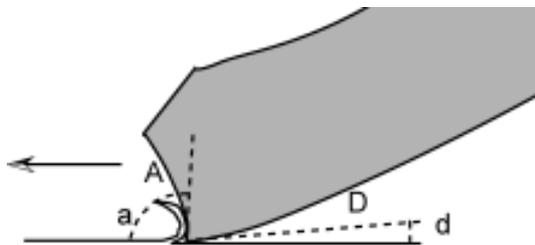

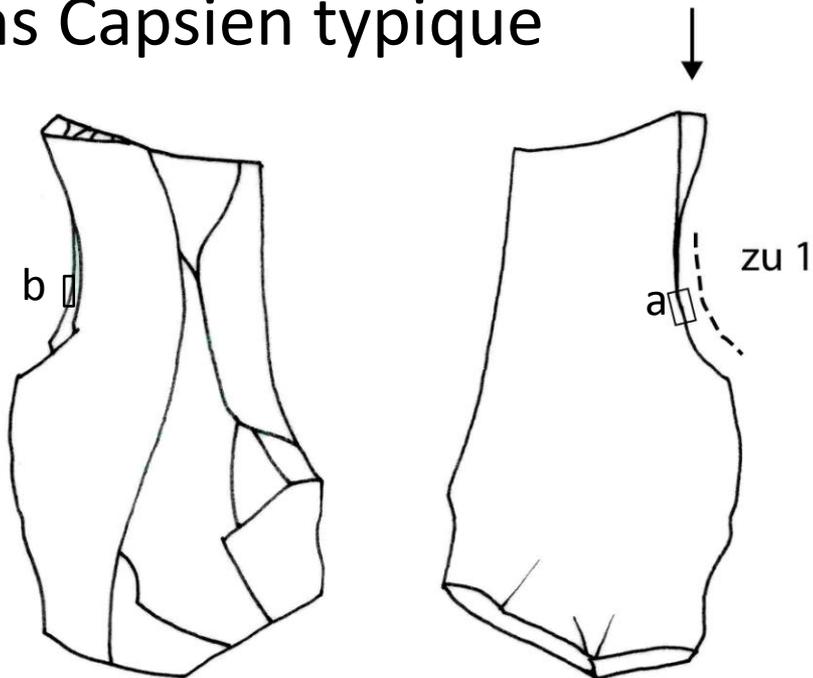

Backed blades and bladelets  
and geometrics  
with impact fractures

	Other uses	% diagnostic impact fractures		Other uses
	Backed blades and bladelets		Geometrics	
Capsien supérieur	Large blades= cutting tools	Fractured backed bladelets 60%	<ul style="list-style-type: none"> <li>➤ 50%</li> <li>➤ Points or barbs</li> <li>➤ Only 1 transverse</li> </ul>	1 trapeze used as a notched blade
Capsien typique		Fractured backed bladelets: 28/52 (54%)	2/6 (33 %)	

# Burins Capsien typique

Wood (?) scraping

N: 45

2 used by other part

6 used on the lateral flank:

-1 scraping mineral

- 3 scraping hard or semi-hard

-2 scraping organic semi-hard material (wood ?)

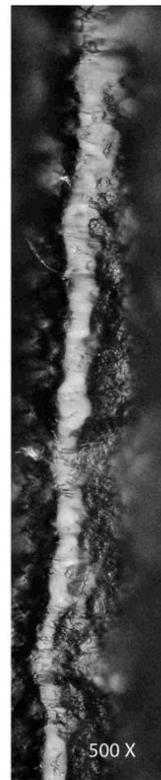

# Burins Capsien supérieur

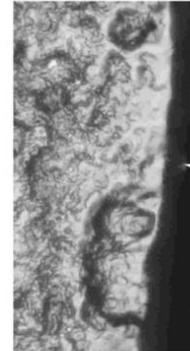

N: 9

1 used to scrape bone

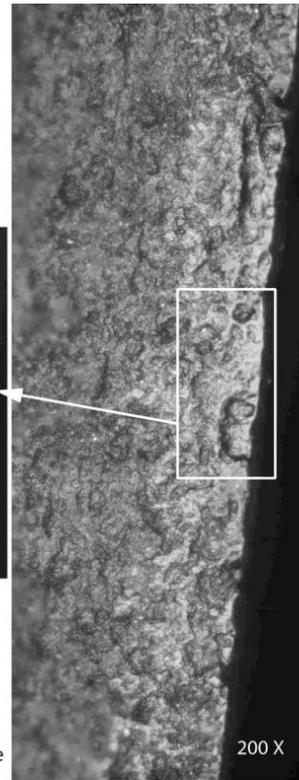

Maybe some burins could be nucleus?

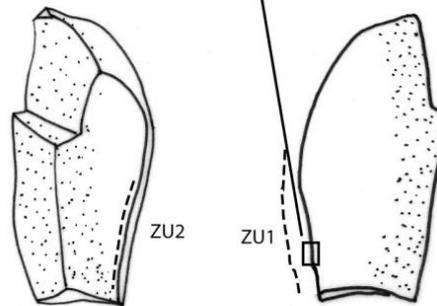

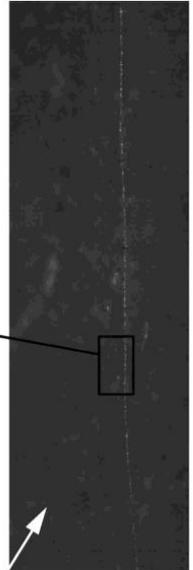

ZU1  
Dépouille

ZU1  
Attaque

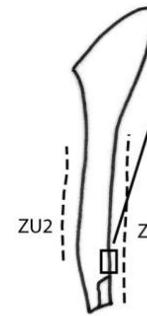

200 X

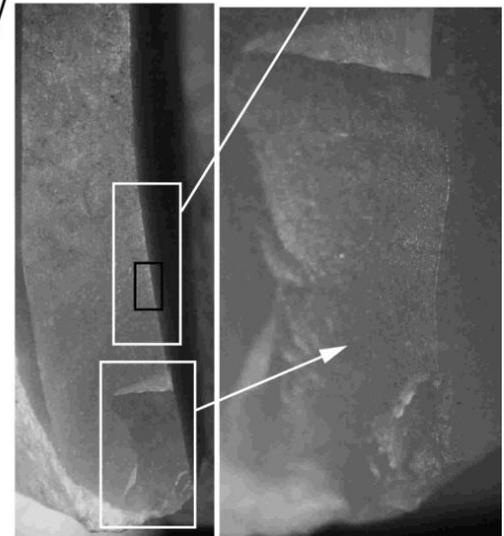

ZU2

ZU1

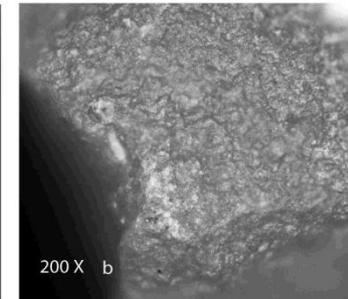

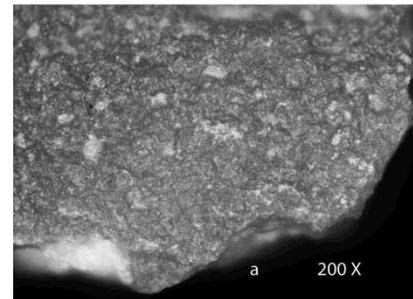

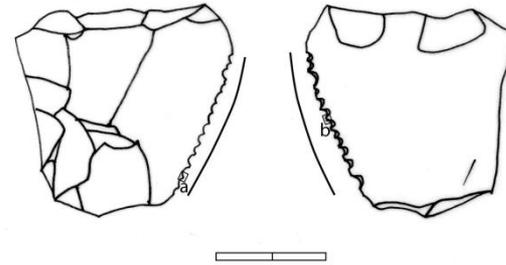

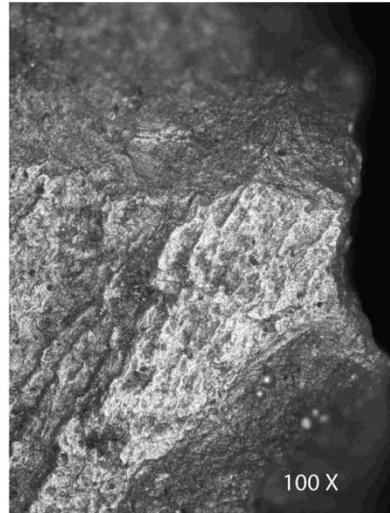

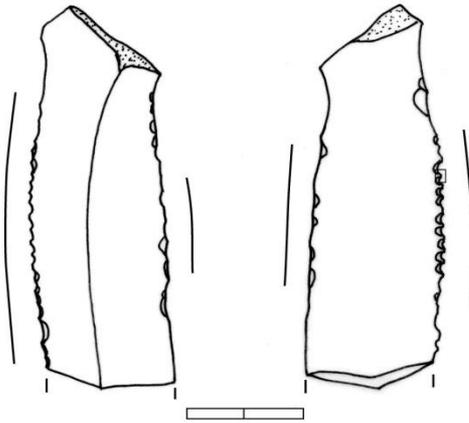

ZU2

ZU1

Scraping hard animal material (bone ?)

# Denticulated blades or flakes from Capsien typique

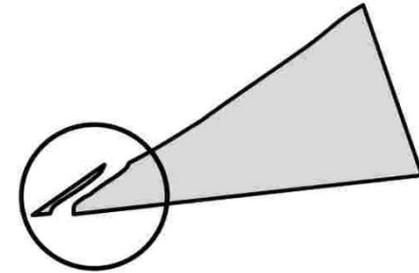

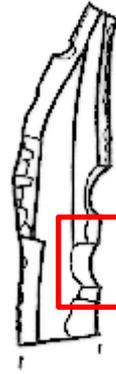

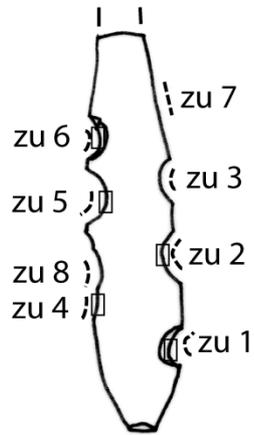

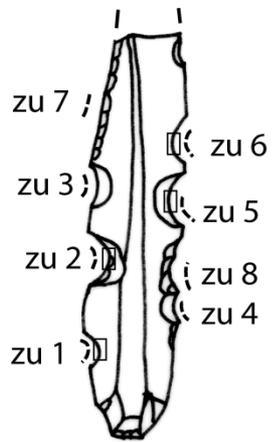

Microdenticulations (several per cm) ; probably cutting tools ?

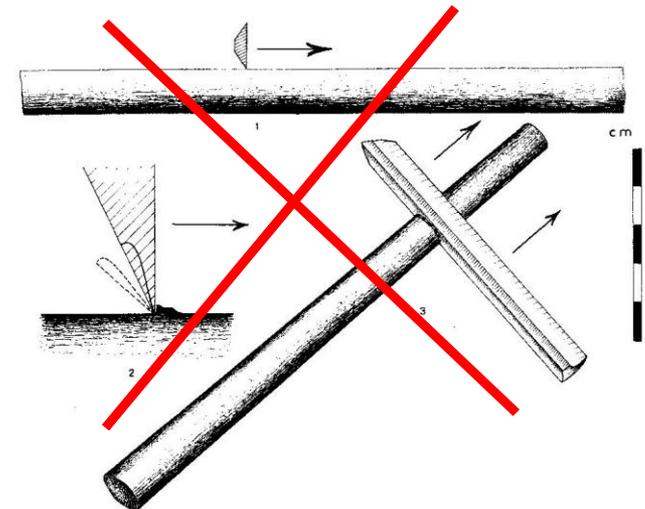

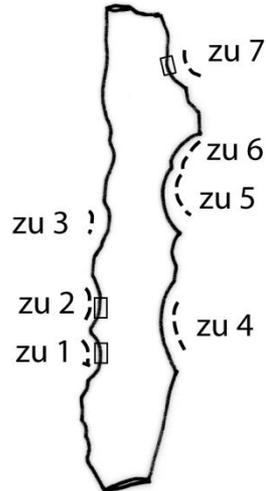

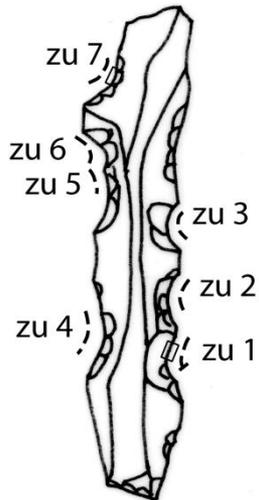

No traces of use found on « notched blades » : open question

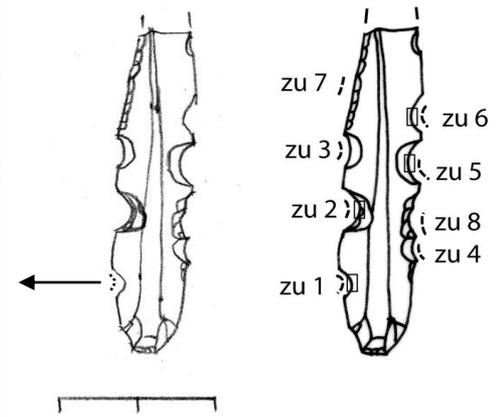

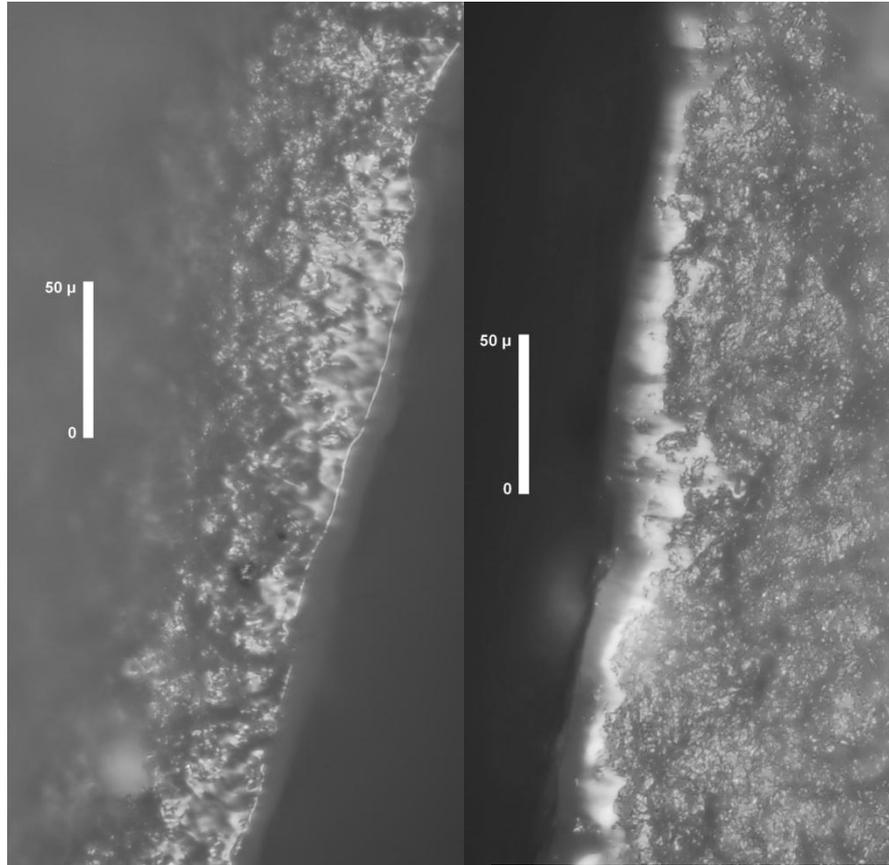

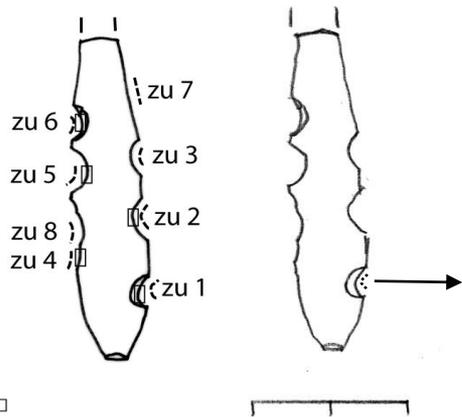

# Notched blades and bladelets from Capsien supérieur

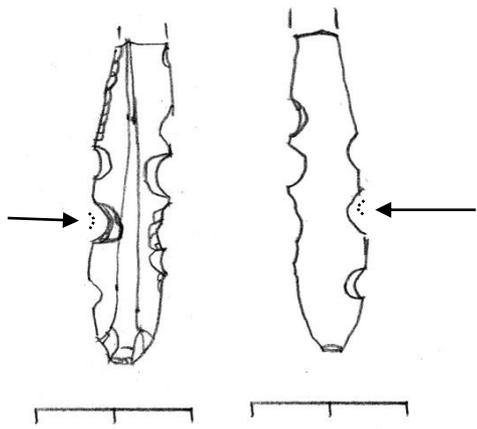

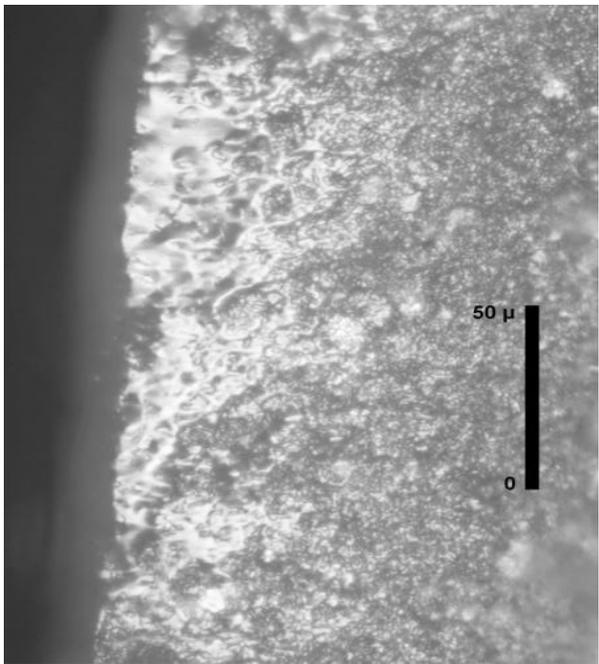

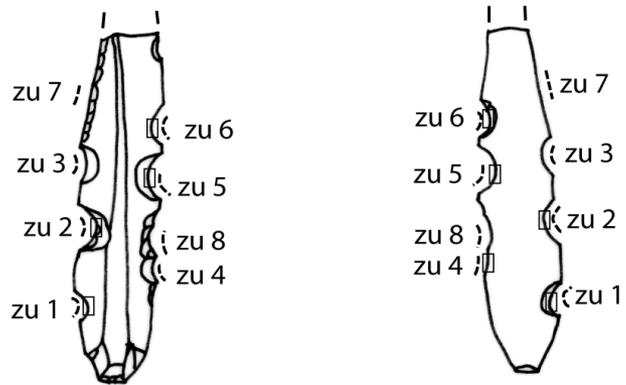

Bending fracture :  
voluntary retouch,  
not use scars

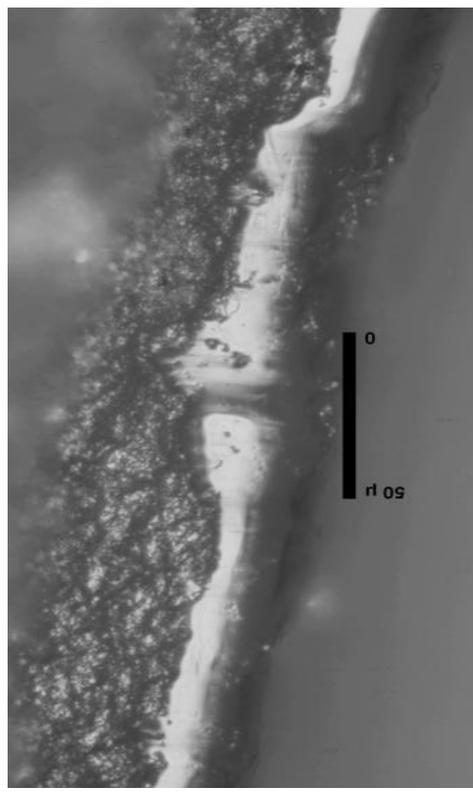

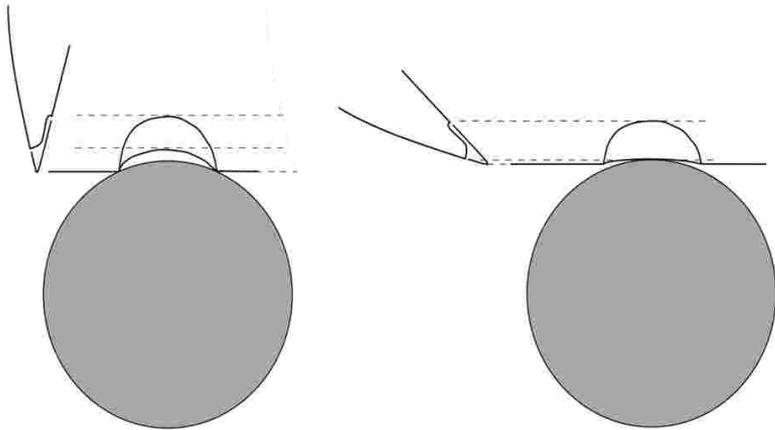

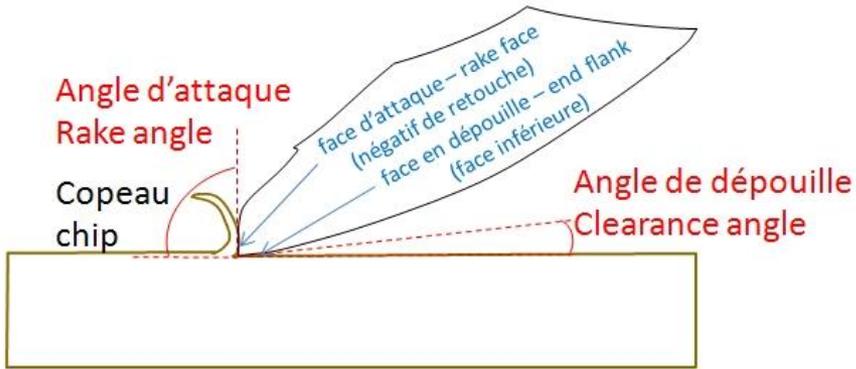

# • ZU 1

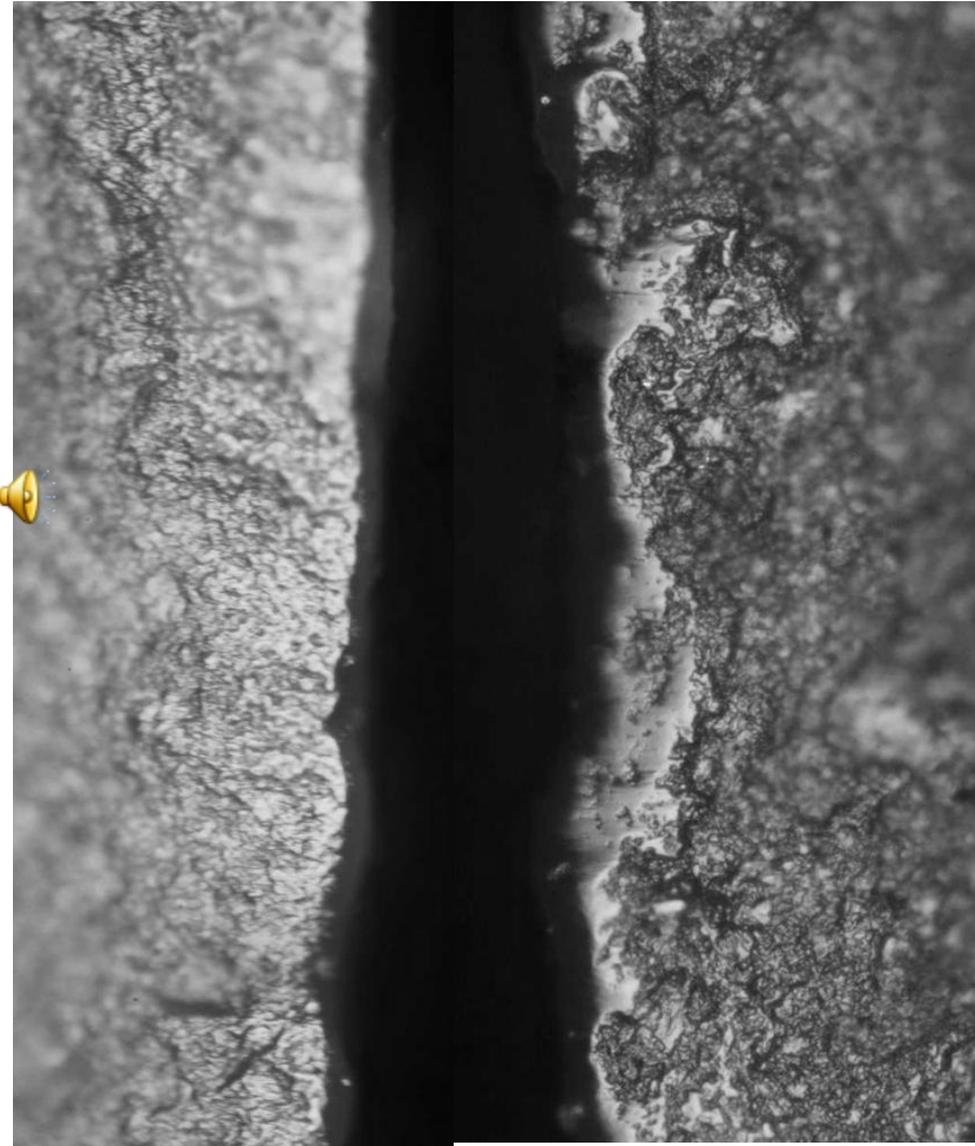

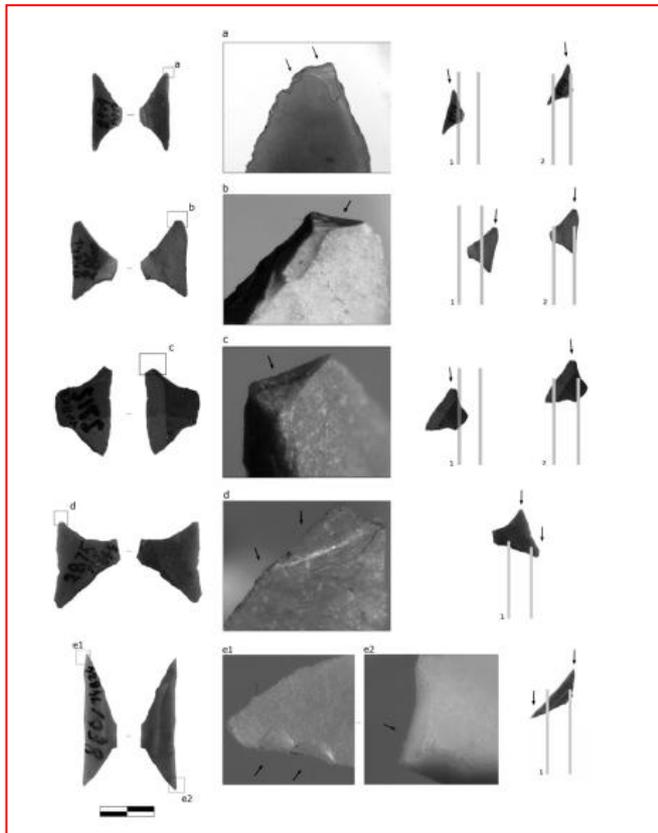

ZU 2  
200 X.

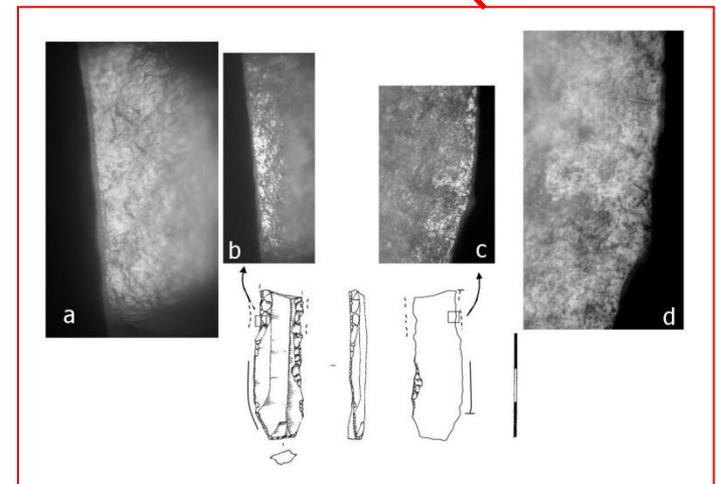

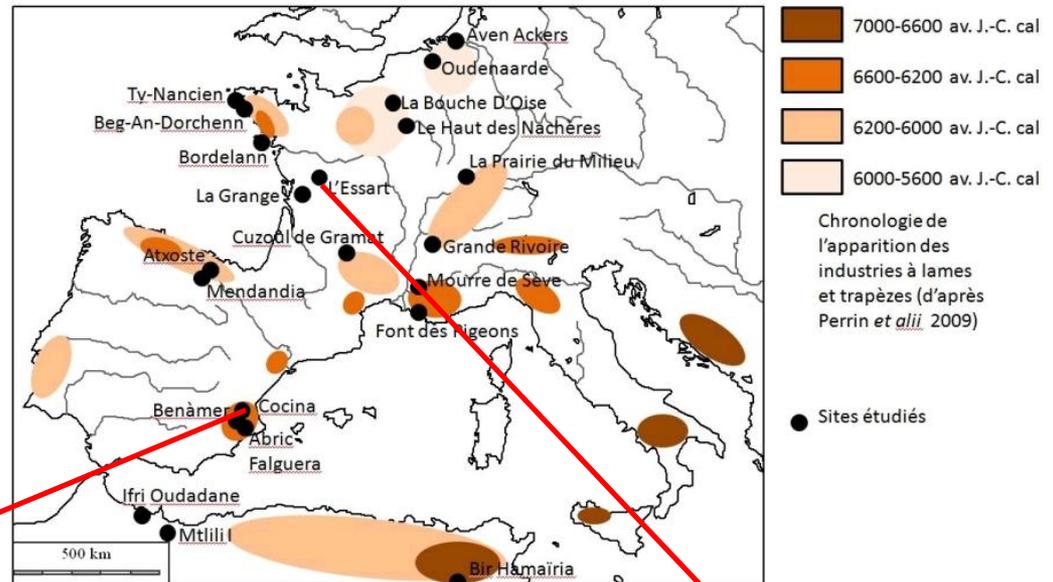

Wood scraping

Cocina, Spain  
(Garcia Puchol *et alii*, 2014)

L'essart, France  
Gassin *et al*, 2014

Same way of using trapezes and notched blades in lithic industries from Western Europ : similarities in production and use of the lithic tool kit.
