Submitted on 5 Jun 2020

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

HAL Authorization

Microbial spoilage of liquid egg products and its control by the detection of genetic or chemical markers

STLOpen Days
19-21 March 2019

Sophie JAN
MICROBIO Team

Introduction

One of the leader in the production and consumption of eggs in the EU
 → 14.9 billion eggs produced / year
 → 213 eggs consumed /year / person

Itavi and AND International, 2017

Table eggs

Egg products

Source of nutrients

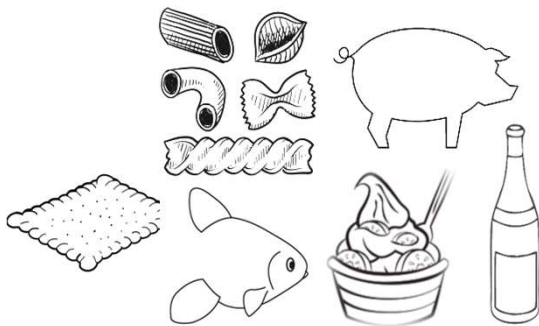

Source of ingredients

Egg products

- Foaming
- Emulsifying
- Coloring
- Binding
- Thickening
- Flavoring

Food industry

Biscuits, pastries, desserts, pasta, chocolate and sugar confectionery, delicatessen, seafood products, wines, etc.

Hospitals
Restaurants

Food artisans

Industrial catering and residential facilities

What about egg microbiology?

Egg content

Sterile except under sporadic cases of contamination by *Salmonella* (mainly *Salmonella* Enteritidis) during egg formation

- Strong affinity for the avian reproductive tract
- Persistence on the eggshell surface
- Resistance to egg defence systems

Less than 1% of contamination but still 30% of strong evidence of salmonellosis caused by eggs or egg products in the EU

EFSA and ECDC, 2017

Eggshell surface

Contaminated in the environments of hen breeding and egg handling and storage

+++ Gram-positive bacteria

Streptococcus, Aerococcus, Micrococcus, Staphylococcus, and low occurrence of Bacillus

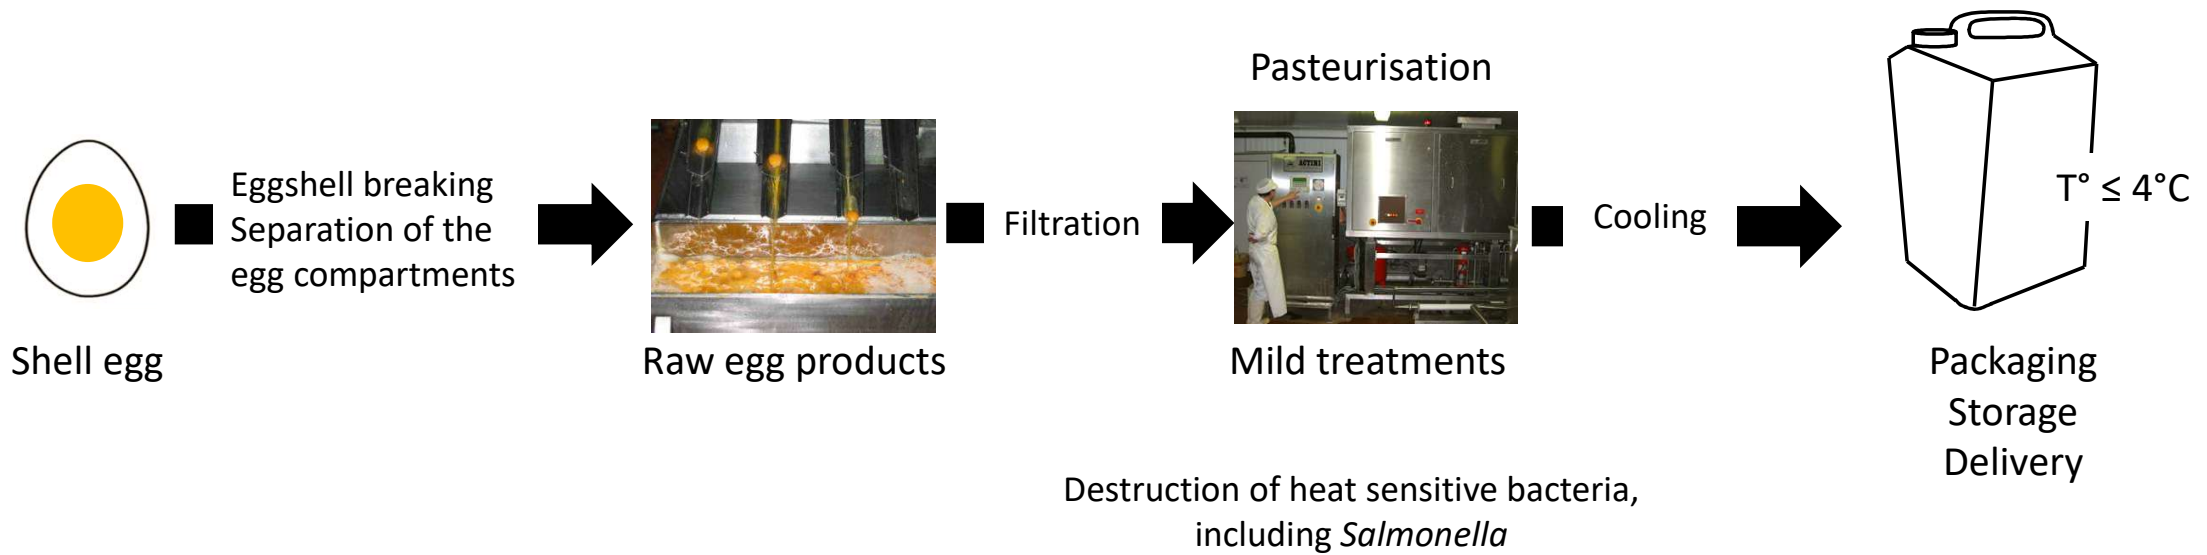

+ Gram-negative bacteria

Escherichia coli, Yersinia, Enterobacter, Klebsiella, Serratia, Citrobacter, Salmonella, Alcaligenes, Pseudomonas

Need for egg product stabilization for ensuring egg product safety

What are the main industrial processes ensuring egg product safety?

What about heat-resistant
bacteria?

What about
psychrotrophic
bacteria?

How to control heat-resistant psychrotrophic bacteria in liquid egg products and sensitive food where they are used as ingredients?

What about the microbiology of egg-based sensitive food?

Industrial egg-based refrigerated desserts

Sweet egg white foam

Custard cream comprising whole egg or egg yolk as ingredient

The famous "île flottante" dessert as a research model

?

What are the microorganisms coming from egg products ?

How to avoid their presence and/or to control their development ?

Demand for the development of industrial efficient tools to detect food spoilage contaminants or the products of their metabolism

What are the main bacterial contaminants of liquid egg products?

What are the main bacterial contaminants of liquid egg products?

Techer et al., 2014 ; Miller et al., 2010 ; Baron et al., 2007 ; Protais et al., 2007 ; Protais et al., 2006 ; Wood et Waites, 1988 ; Foegeding et Stanley, 1987 ; Payne et Goch, 1980 ; Shafi et al., 1970

What are the main bacterial contaminants of liquid whole egg products?

Industrial finished whole egg products coming from 5 French industries

Enrichment of the Gram positive flora

37°C

Mesophilic *Bacillus cereus* group bacteria
100 % of the companies
76 % of the samples

10°C

Psychrotrophic *Bacillus cereus* group bacteria
100 % of the companies
44 % of the samples

Higher occurrence at the cold season

Koné et al., 2013 BPS

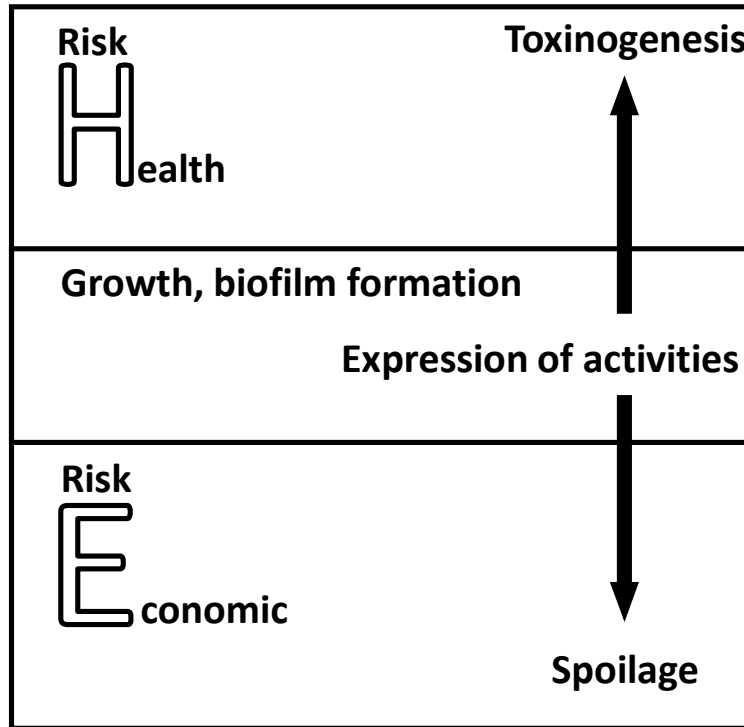

Bacterial collection of 68 representative psychrotrophic *B. cereus* group bacteria

What are the main features of the bacterial collection coming from whole egg products?

68 psychrotrophic *B. cereus* group bacteria

Genetic markers of the psychrotrophy

Belonging to a phylogenetic group (*panC* sequence) (Guinebretière et al., 2008)

Jan et al., 2011. Food Microbiol.

What are the main features of the bacterial collection coming from whole egg products?

A high diversity inside the collection

68 psychrotrophic *B. cereus* group bacteria

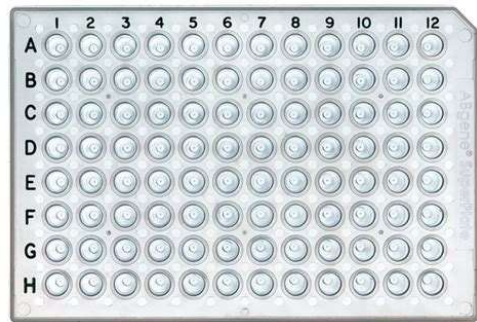

Jan et al., 2011. Food Microbiol.

Belonging to a phylogenetic group (*panC* sequence) (Guinebretière et al., 2008)

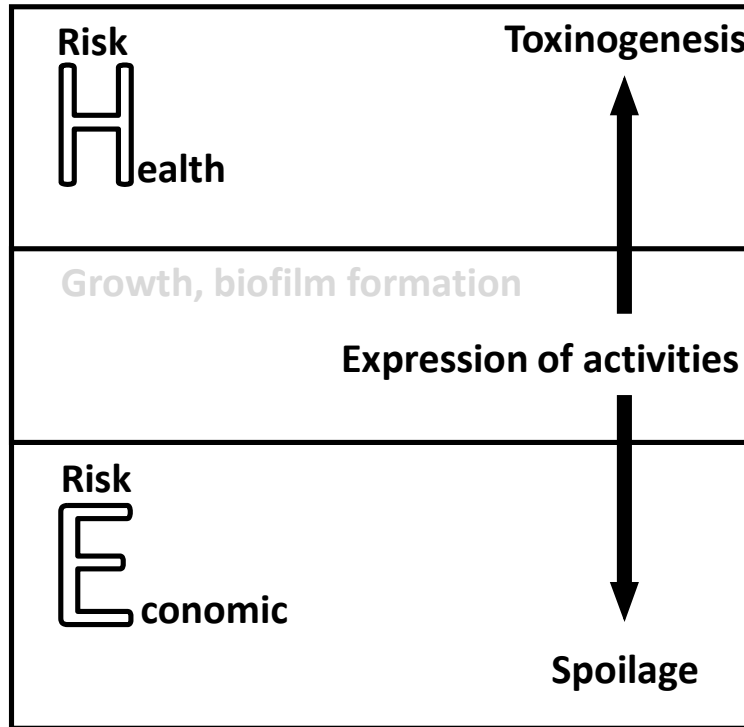

Five phylogenetic groups

Group VI	48.5 %
Group II	41.0 %
Group V	1.5 %
Group IV	7.5 %
Group III	1.5 %

What are the main features of the bacterial collection coming from whole egg products?

68 psychrotrophic *B. cereus* group bacteria

Jan et al., 2011. Food Microbiol.

Cytotoxic activity as a function of time

Spoilage as a function of time

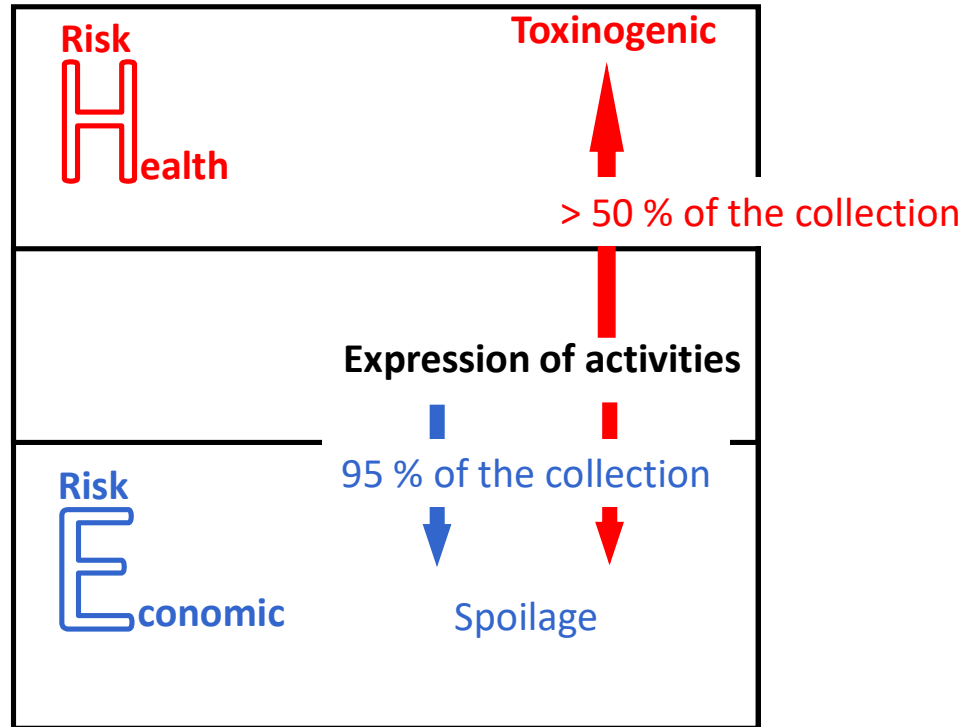

What are the main features of the bacterial collection coming from whole egg products?

Optimal growth medium

at optimal temperature

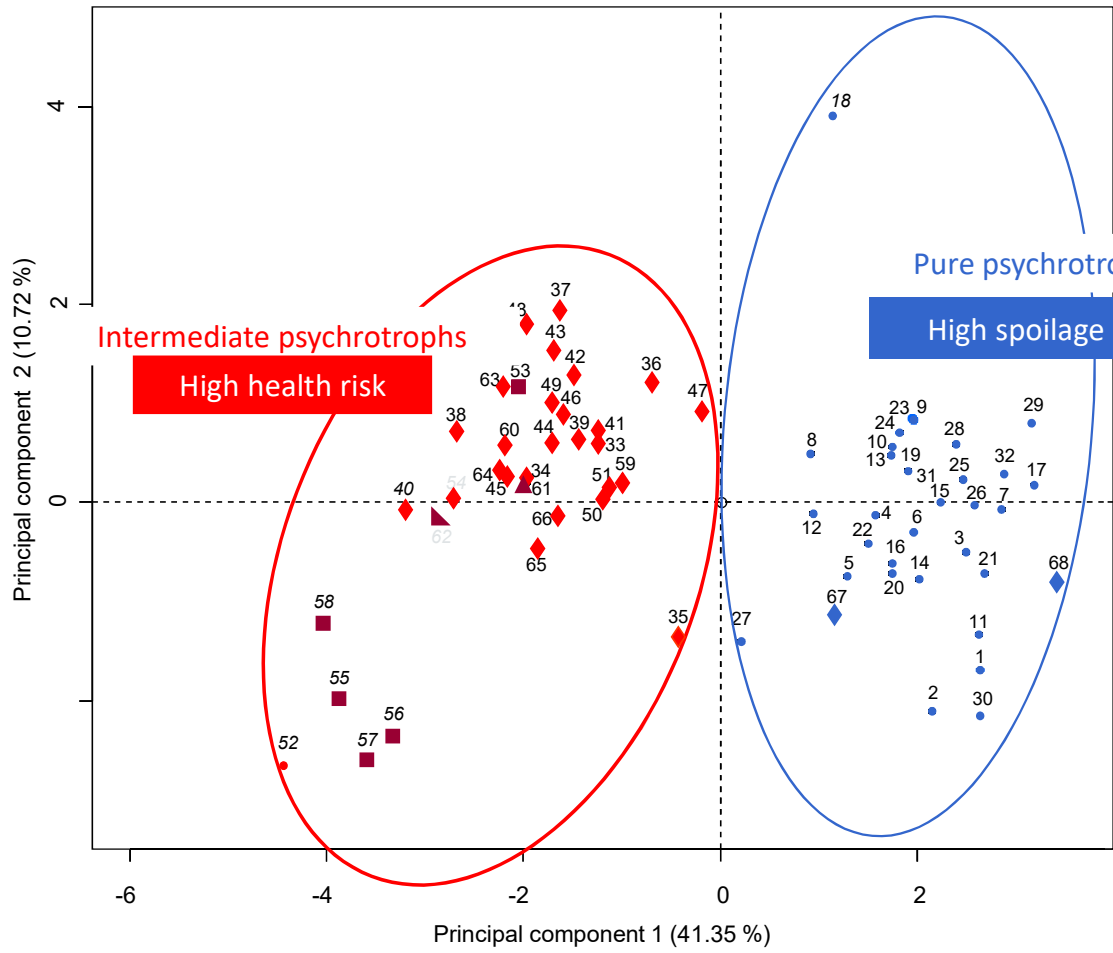

even at low temperature

Jan et al., 2011. Food Microbiol.

What are the main features of the bacterial collection coming from whole egg products?

An inverse correlation between health and spoilage risks

A psychrotrophic signature in the *cspA* gene

LEGEND

- ◆ group II
- ▲ group III
- group IV
- ▼ group V
- group VI

In red : isolates associated to health risk

In blue : isolates associated to spoilage risk

In garned red : isolates associated to high sanitary risk

Techer et al., 2014. J. Appl. Microbiol.

What are the main features of the bacterial collection coming from whole egg products?

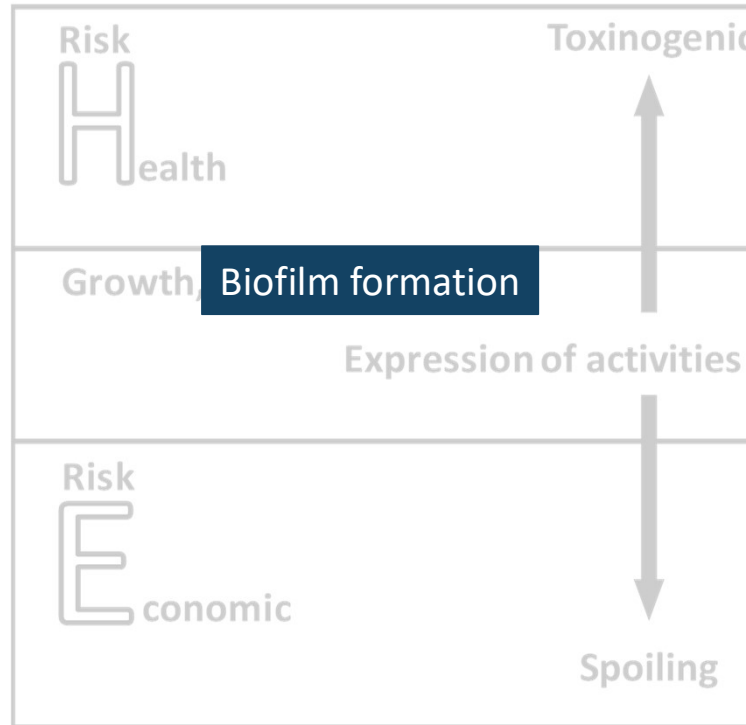

An established risk of biofilm formation

Stainless steel surfaces

Strong adhesion

Jan et al., 2011. Food Microbiol.

What are the main features of the bacterial collection coming from whole egg products?

Selection by the process

What about the actual risks?

Techer et al., 2014. J. Appl. Microbiol.

What are the main bacterial contaminants of liquid egg white products?

What are the main bacterial contaminants of liquid egg white products?

Egg white
Poorly adapted to microbial growth

Before heat-treatment

After heat-treatment

Techer et al., 2015, J. Food Science

Main contaminants

What are the main bacterial contaminants of liquid egg white products?

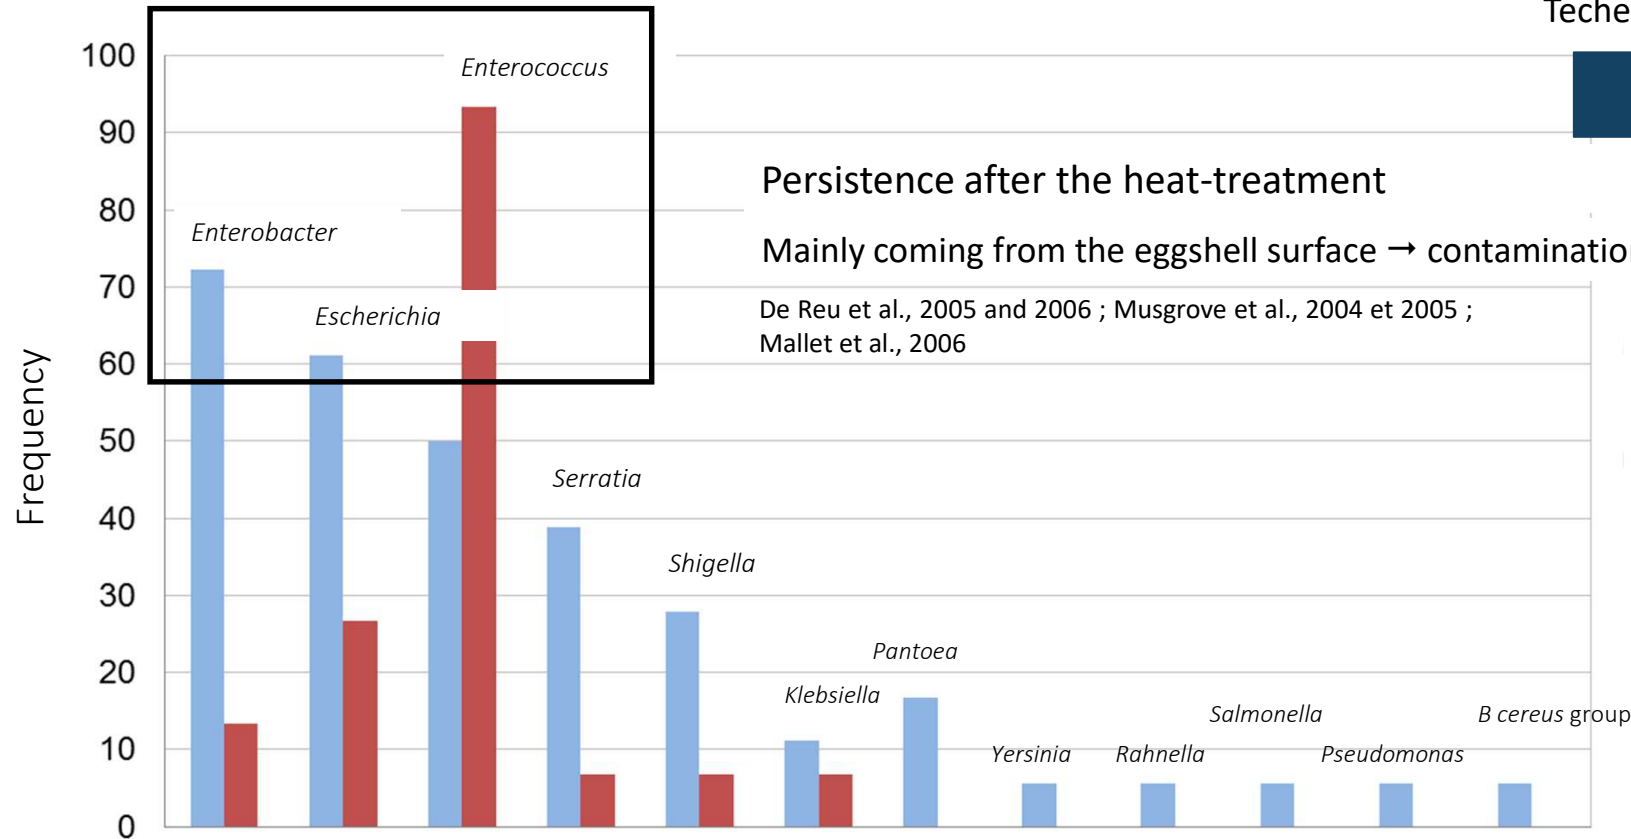

Techer et al., 2015, J. Food Science

Main contaminants

Persistence after the heat-treatment

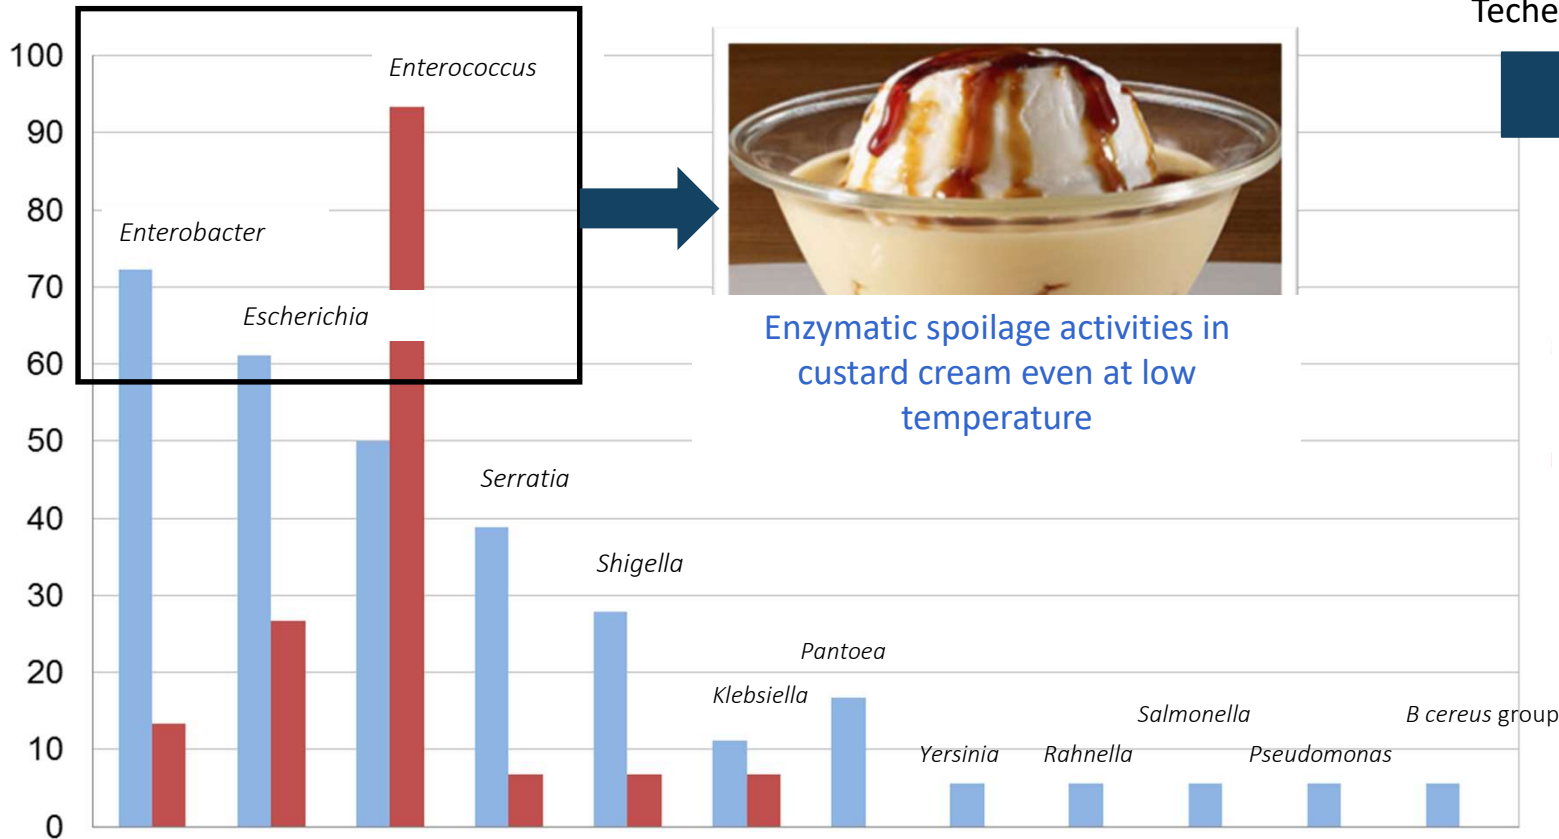

Mainly coming from the eggshell surface → contamination at the egg breeding step

De Reu et al., 2005 and 2006 ; Musgrove et al., 2004 et 2005 ; Mallet et al., 2006

What are the main bacterial contaminants of liquid egg white products?

Techer et al., 2015, J. Food Science

Main contaminants

Conclusion

Persistence of heat-resistant psychrotrophic bacteria in pasteurised liquid egg products
Spoilage activities, in the product itself and when used as ingredient, even at low temperature

Genetic signature of the spoilage risk due to psychrotrophic *B. cereus* group bacteria

And now?

Study of the bacterial spoilage metabolism

Development of online tools to early detect food spoilage contaminants or the products of their metabolism

MERCI
