**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

2019 

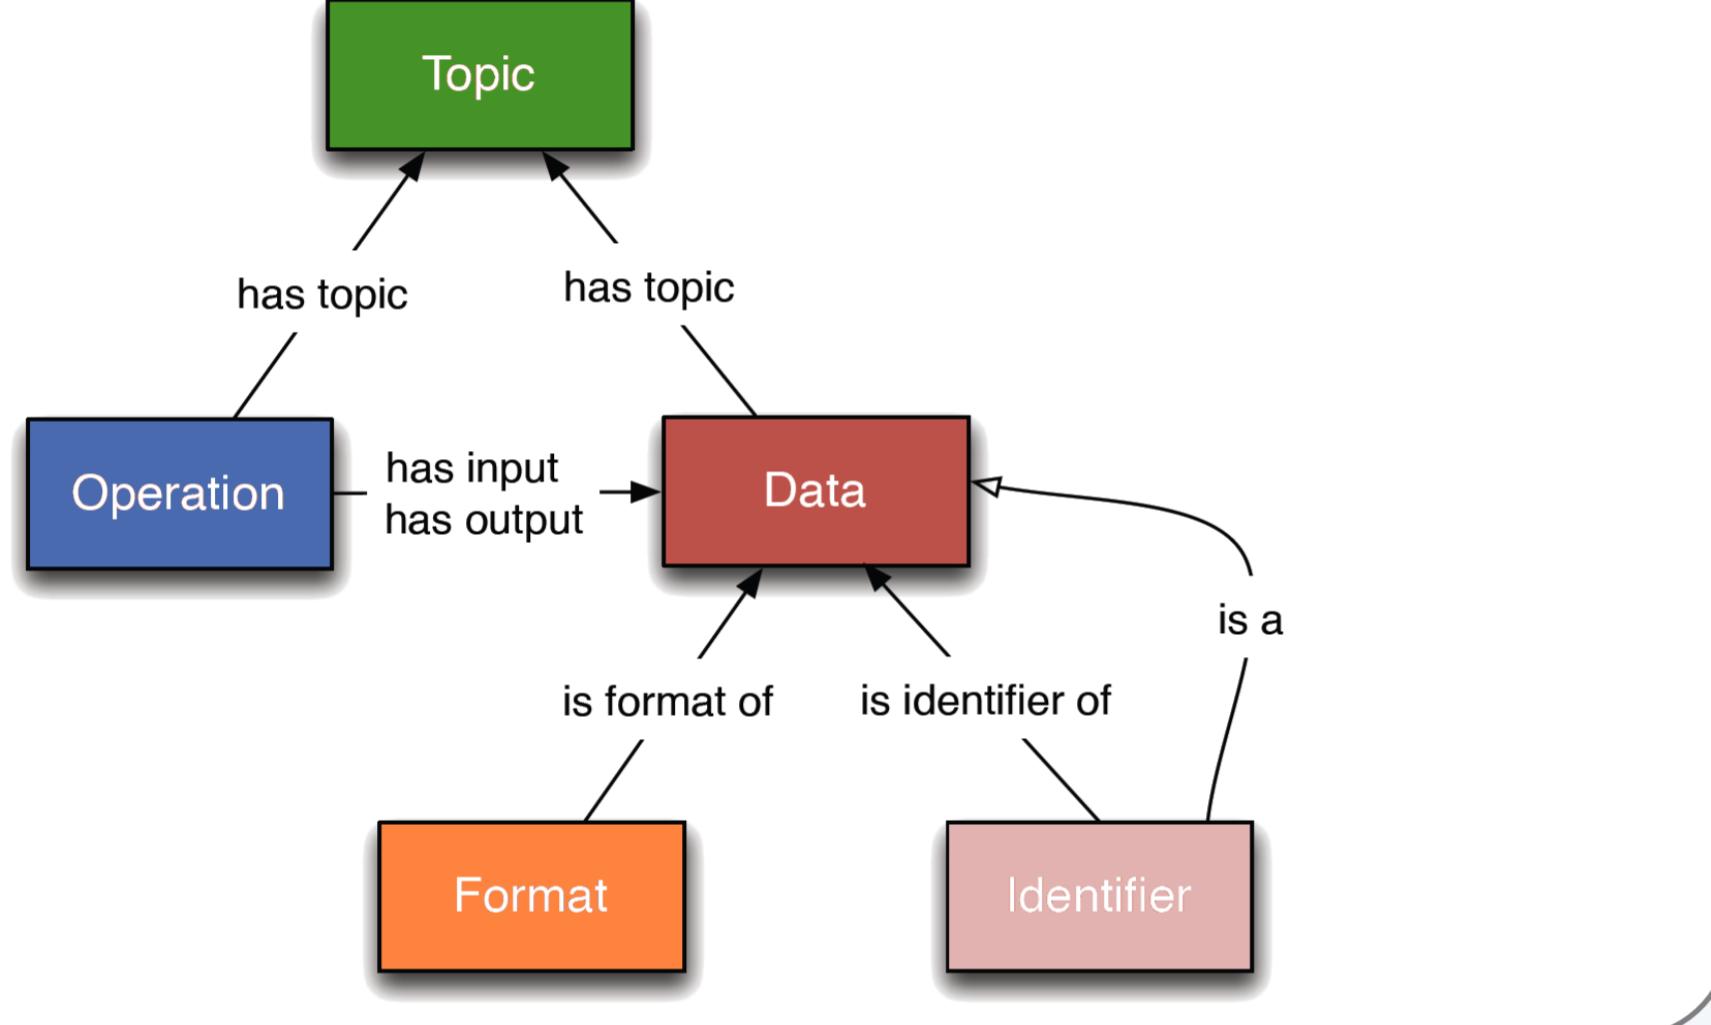

**What?** EDAM-bioimaging is an extension of the [EDAM ontology](#), dedicated to bioimage analysis, bioimage informatics, and bioimaging.

**Why?** EDAM-bioimaging enables interoperable descriptions of software, publications, data, and workflows, fostering reliable and transparent science.

**How?** EDAM-bioimaging is developed in a community spirit, in a welcoming collaboration between numerous bioimaging experts and ontology developers.

**How can I contribute?** We need your expertise! You can help by reviewing parts of EDAM-bioimaging, posting comments with suggestions, requirements, or needs for clarification, or participating in a Taggathon or another hackathon. Please see <https://github.com/edamontology/edam-bioimaging#contributing>.

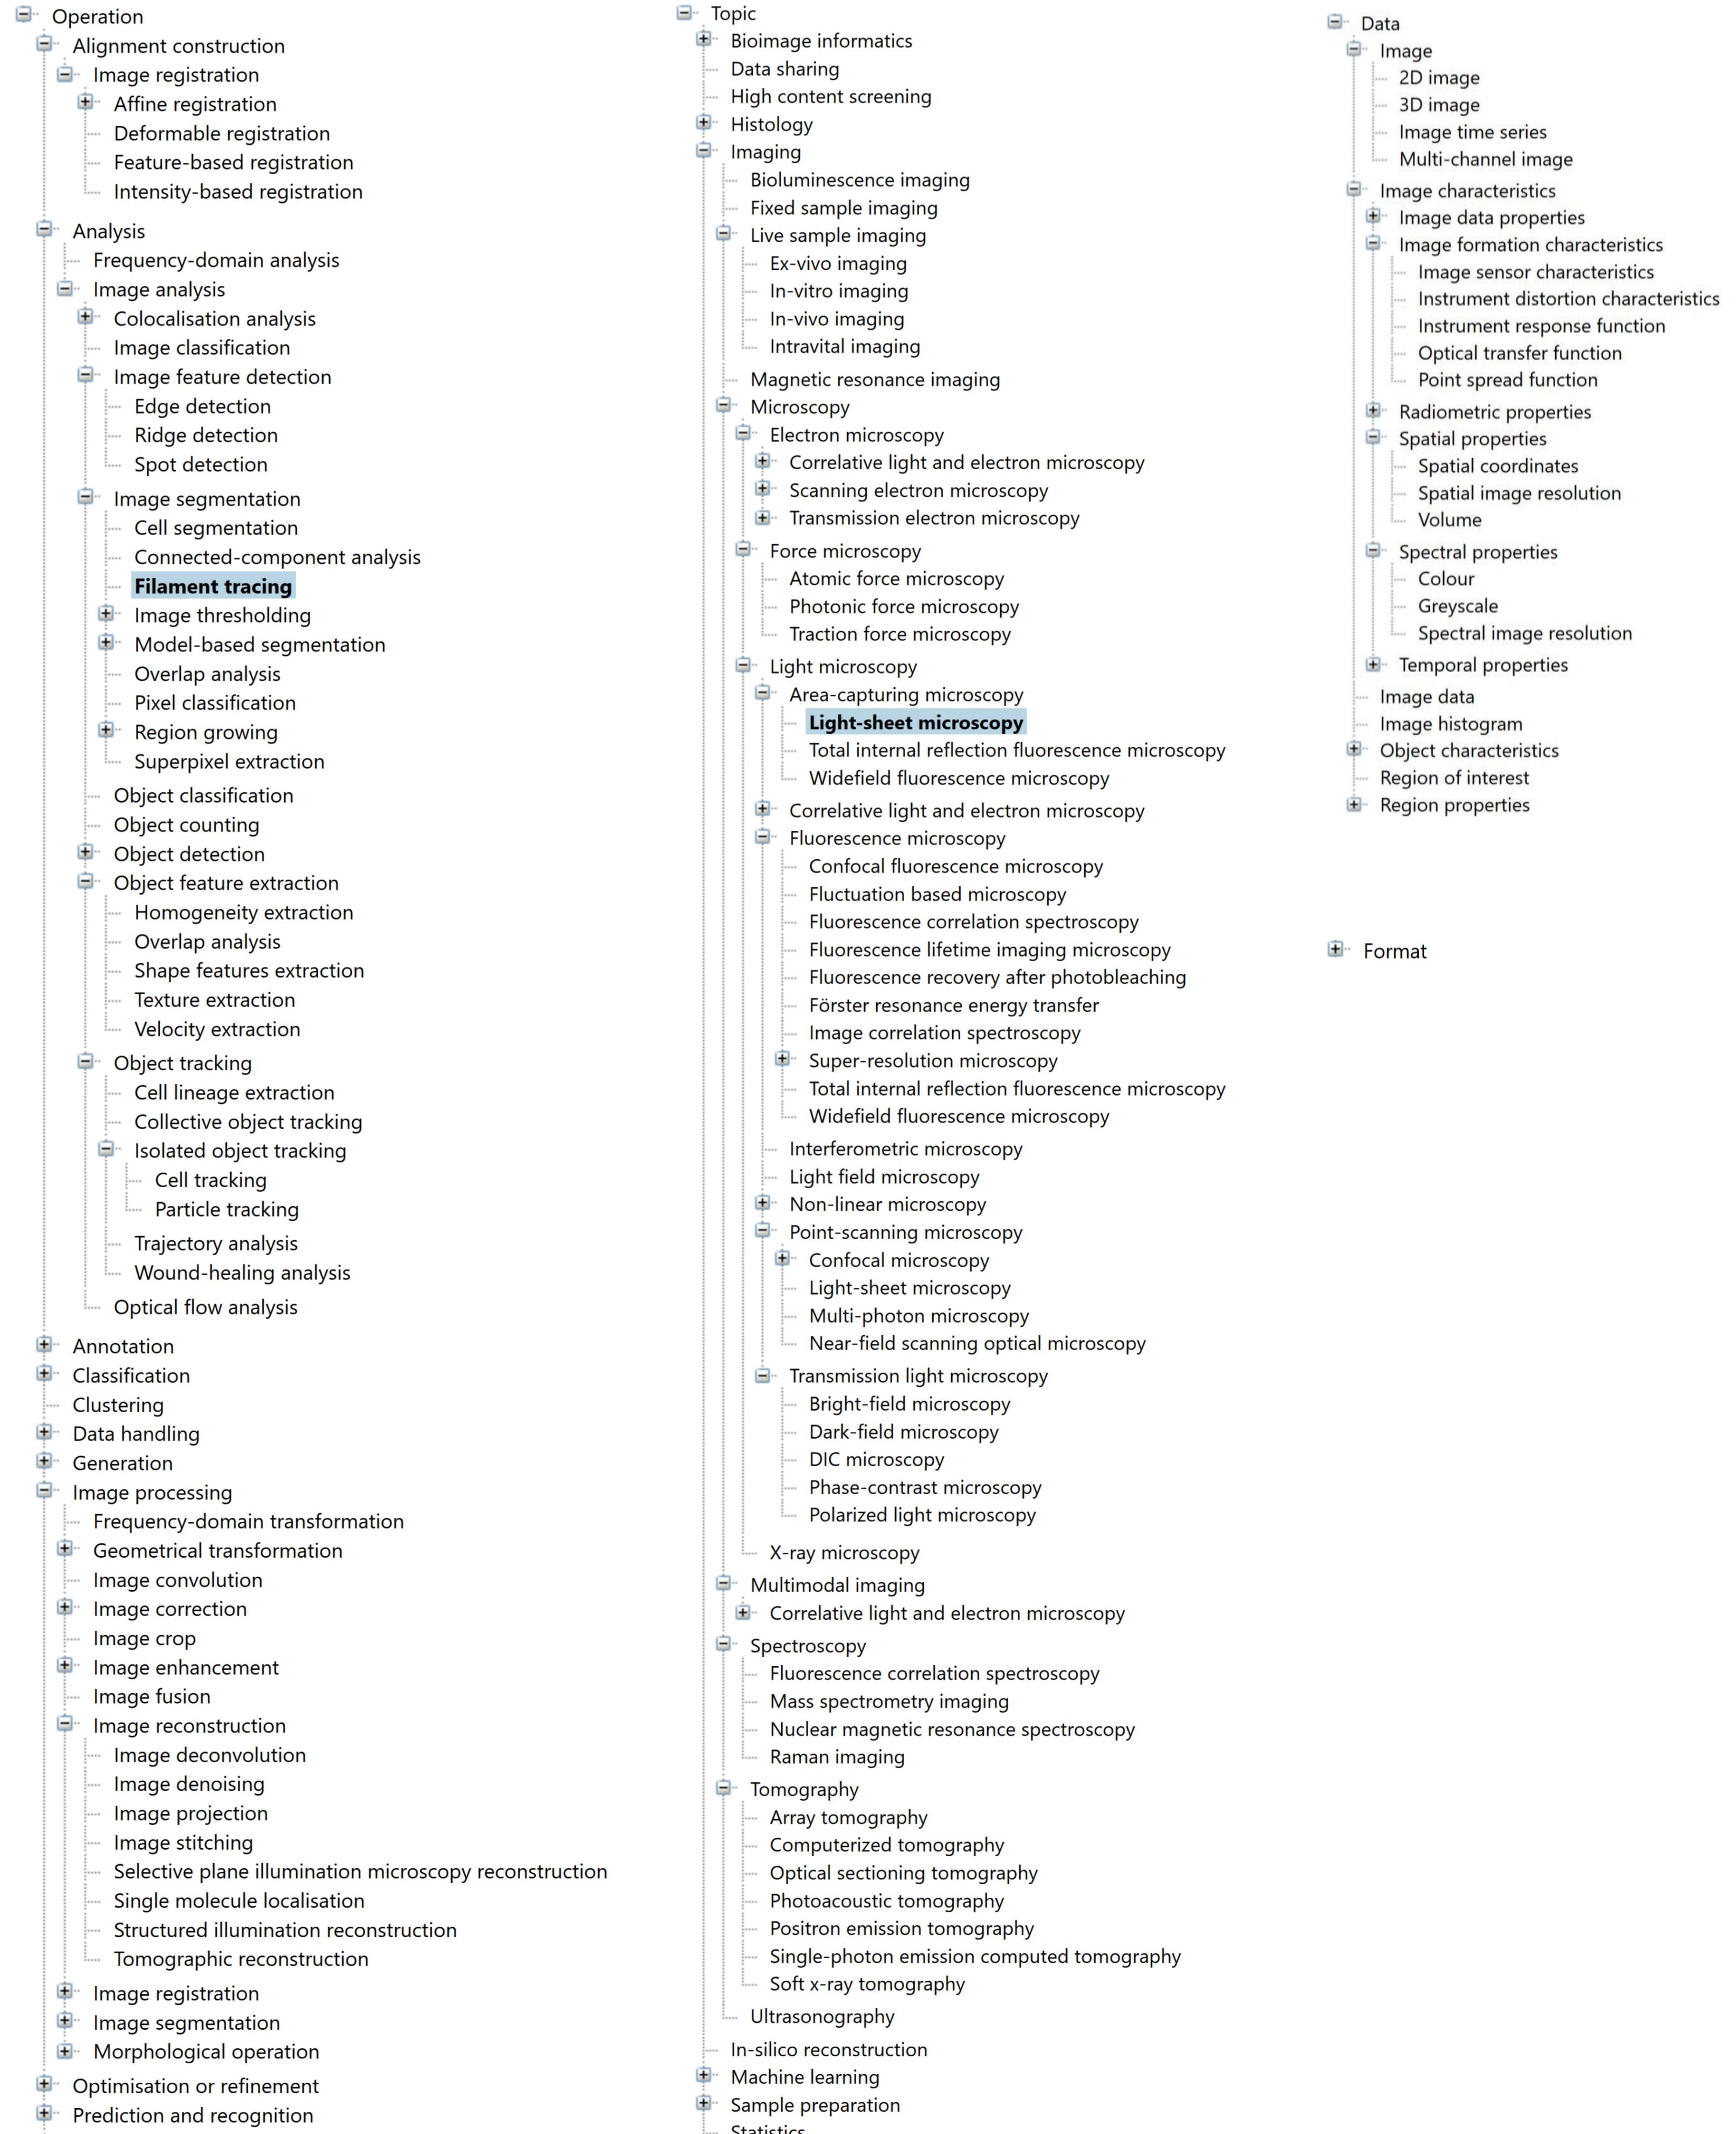

### STRUCTURE OF EDAM

### EXAMPLE CONCEPTS

Preferred Name	Light-sheet microscopy
Definition	Fluorescence microscopy technique in which the plane of illumination is orthogonal to the axis of observation.
LSFM	Selective Plane Illumination Microscopy
DSLM	Light-sheet fluorescence microscopy
DLSM	Digital scanned Laser Light-sheet Microscopy
SPIM	Thin Sheet Laser Imaging Microscopy
hasNarrowSynonym	Lattice Light-sheet Microscopy
	Dual-View inverted SPIM
	Spherical aberrations assisted Extended Depth-of-field Lightsheet Microscopy
	Bessel Beam Lightsheet Microscopy
	single objective Selective Plane illumination Microscopy
	Hardware implementations: multidirectional SPIM
ULSM	ULSM
	Multiview Selective Plane illumination Microscopy
MuViSPIM	MuViSPIM
inverted SPIM	inverted SPIM
soSPIM	soSPIM
dSPIM	dSPIM
COLM	COLM
SPED	SPED
	Clarity Optimized Light-sheet Microscopy
mSPIM	mSPIM
iSPIM	iSPIM
seeAlso	<a href="https://en.wikipedia.org/wiki/Light_sheet_fluorescence_microscopy">https://en.wikipedia.org/wiki/Light_sheet_fluorescence_microscopy</a>
subClassOf	Area-capturing microscopy
	Point-scanning microscopy

### HIERARCHIES OF EDAM-bioimaging

EDAM-bioimaging is used in [biii.eu](#), the registry portal of bioimage informatics and analysis resources

**Paintera**  
Component Description  
Paintera is a general visualization tool for 3D volumetric data and point-readings in segmentation/reconstruction with a primary focus on neuron reconstruction from electron micrographs in connectomics. It features/supports:

- Views of orthogonal 2D cross-sections of the data at arbitrary angles and zoom levels
- Mipmaps for efficient display of arbitrarily large data at arbitrary scale levels
- Label data
  - Painting
  - Manual agglomeration
  - 3D visualization as polygon meshes
    - Meshes for each mipmap level
    - Mesh generation on-the-fly via marching cubes to generate meshes and agglomerations in 3D visualization. Marching Cubes is parallelized over small blocks. Only relevant blocks are considered (huge speed-up for sparse label data).

Paintera is implemented in Java and makes extensive use of the UI framework JavaFX

has topic

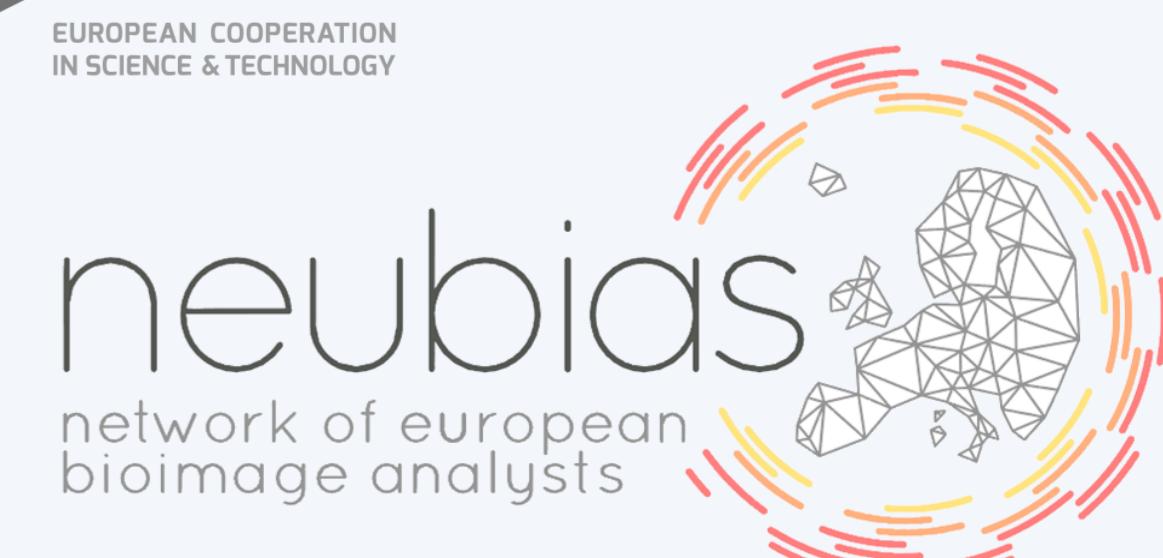

- Electron microscopy
- In-silico reconstruction

has function

- Filament tracing
- Image reconstruction
- Image visualisation
- Slice rendering
- Surface rendering
- Volume rendering

cost  
EUROPEAN COOPERATION  
IN SCIENCE & TECHNOLOGY

EDAM-bioimaging is developed in an interdisciplinary open collaboration supported by the hosting institutions, participating individuals, and NEUBIAS COST Action (CA15124) and ELIXIR-EXCELERATE (676559) funded by the Horizon 2020 Framework Programme of the European Union.
