HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

800 students using Matlab during a new course on Systems Modeling at CentraleSupélec

Cristina Stoica Maniu, Guillaume Sandou, Véronique Letort-Le Chevalier,
CentraleSupélec

In the context of a new curriculum, CentraleSupélec proposes a new core course on *Systems Modeling – Model Representations and Analysis* for all the first year students. The students learn how to represent the behavior of a system with a well-suited model and how to evaluate the validity domain of the proposed model.

In order to make the course easy-understandable, interactive and attractive for students, Matlab-based tutorials were proposed. In addition, 201 mini-projects were proposed, developed (using either Matlab/Simulink or Python) and peer reviewed (via Edunao) by the students.

Advantages of using MATLAB (and Simulink):

- Simulate and analyze the behavior of the proposed models (continuous-time or discrete-time models, continuous-state or discrete-state models)
- Gain experience by practicing the modeling process during a mini-project with numerous application fields (energy, robotics, health, financial modeling, nature, sociology, etc.)
- Stimulate students' creativity via 201 mini-projects

“ High level academic program at CentraleSupélec on dynamical **System Modeling** made **easy-understandable** and **inspiring** for the 800 engineering students via **MATLAB® simulations** ”

Blood test laboratory modeling
Vehicle weighting system Prostate cancer tumor model analysis
Initial heterogeneous levels in systems modeling
Matlab simulations Diabolo throwing modeling
Robot arm modeling **Systems modeling**
Identification of an industrial furnace
Product storage system Peer-reviewed mini-projects
800 engineering students Analysis of flexibility modes of a bridge
Analysis of dynamical properties of swords
