HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Key words: errata, addenda – galaxies: clusters: general – galaxies: evolution – galaxies: kinematics and dynamics – large-scale structure of Universe.

This is an erratum to the paper ‘Mass calibration of the CODEX cluster sample using SPIDERS spectroscopy—I. The richness–mass relation’ that was published in MNRAS, 486, 1594–1607 (2019). In the original version of this paper, Figs 3 and 4 referred to a different analysis carried out using X-ray luminosities instead of richness. The Figures have now been updated to reflect the results of the richness–mass calibration work. The author apologises for this error.

Figure 3. Distribution of richness λ and cluster redshift z_c of the final cluster sample.

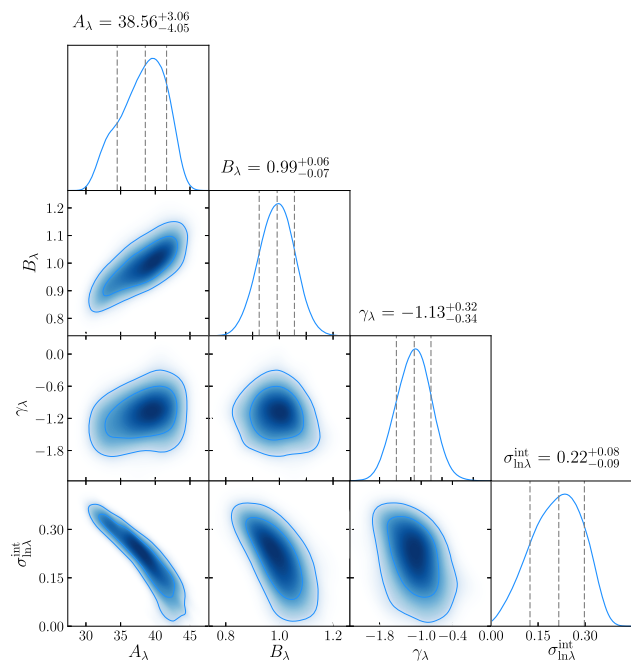

Figure 4. Parameters of the λ – M_{200c} – z relation. Contours show the 1σ , 2σ , and 3σ confidence regions.
