HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

All 2-Input Logic Gates and a Half-Adder in a Single Reconfigurable Plasmonic Cavity

Upkar Kumar¹, Aurélien Cuche¹, Christian Girard¹, Sviatlana Viarbitskaya², Gérard Colas des Francs², Sreenath Bolisetty³, Raffaele Mezzenga³, Alexandre Bouhelier², and Erik Dujardin^{1*}

Abstract:

Main text

Acknowledgments: This work has been funded by the French Agence Nationale de la Recherche (Grant ANR-13-BS10-0007-ANR-PLACORE), the Region of Burgundy (PARI II Photcom) and the European Research Council (FP7-ERC 2007-2013 Grant Agreement No. 306772-COMOSYEL). The authors acknowledge the support of the massively parallel computing center CALMIP (Toulouse, Fr).

Author Contributions. ED, AB designed the experiments. RM, SB synthesized the Au microplatelets. UK, ED conducted the sample preparation and nanofabrication steps. AB, SV implemented the experimental optical set-up. UK, SV performed the optical experiments. ED, UK processed the data. CG, AC, UK, GCdF developed the simulations tools and performed all GDM calculations. ED developed the gate mapping and drafted the manuscript, which was amended by all co-authors. All co-authors have given approval to the final version of the manuscript.
