Submitted on 5 Jun 2020

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Science and Technology of Milk and Eggs (STLO)

INRA-AGROCAMPUS Ouest

Yves Le Loir

Milk & Egg Science and Technology

**Departments: MICA, CEPIA, P3AN
Carnot Institute « Qualiment » (since 2016)**

130-140 persons

83 tenure staff

(39 researchers and professors;
44 technicians and engineers)

~25 Docs and Post-Docs / year

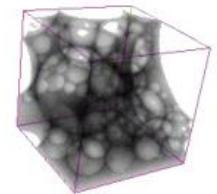

~15 Students (Master)

16 members of R&D dept (private sector)

STLO: main research areas

Increase the knowledge on **molecular and supramolecular structure** of milk and egg components

Understand protein-protein, protein-lipid, protein-mineral **interactions** leading to expected technological and bioactivity **functionalities** and understand their **digestion**

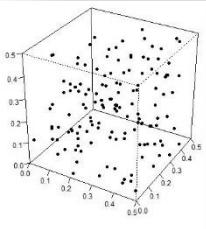

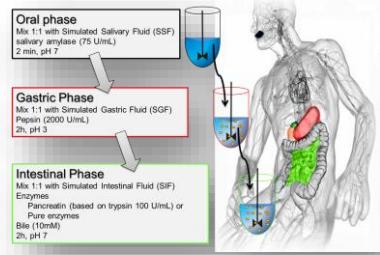

Analyze **transfers** during **technological processes**

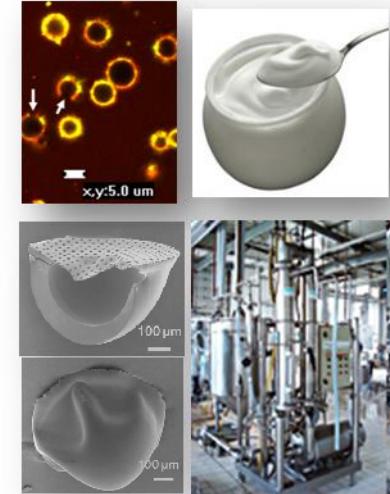

Characterize **interactions between bacterial communities/environment** in relationship with product quality, food safety and probiotic activity

PRODUCTION & VALORISATION (2014-2018)

376 papers in peer-reviewed journals
(74% in Q1)

- 88 % with partners outside STLO
- 48 % with foreign partners

104 papers dedicated to dissemination towards professionals and large public.

- 86 Book chapters
- 9 Book editions

- 654 Conferences (514 with proceedings)
- 203 Posters

- 5 patents incl. 2 softwares
 - SD²P® (31 licences), 8 countries
 - Milk Salt® (7 licences)

International Research Network **INFOGEST**

Microbio team

Understand the way bacterial communities work to control and use their potential towards target functionalities

Animal Health

Offer alternatives to antibiotic treatments

Sustainability, food safety and quality

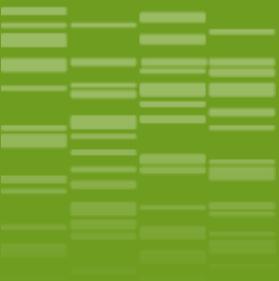

Develop safe, healthy, sustainable and hedonic fermented foods
Reduce the safety and spoiling risks

Health and wellbeing

Develop functional food against modern lifestyle diseases

EVs << live N305

Cellular response

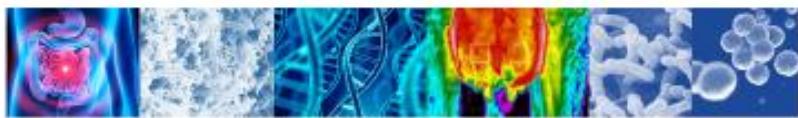

EVs act as a “proxy” in Gram positive pathogens?

- ✓ *S. aureus* N305 EVs are non cytotoxic *in vitro*
 - ✓ *S. aureus* N305 EVs modulate the epithelial immune response *in vitro*
 - ✓ *S. aureus* N305 EVs induce a dose-dependent PMN recruitment after intramammary infection
 - ✓ *S. aureus* N305 EVs induce a dose-dependent production of chemokines after intramammary infection
- 

What about other Gram positive bacteria (food-grade and probiotic bacteria)?

BactInflam Summer School

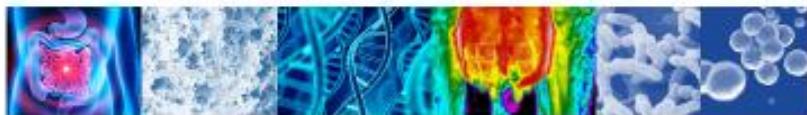

June 29th-July 3rd 2020
Rennes, France

Interplay between bacteria and the immune system, seen through the prism of inflammation, immune maturation or immune tolerance starts to be better understood, and breakthrough applications based on this new knowledge are now available on the market.

BactInflam Summer School

A 5-day summer school. One topic per day.

Talks on...

- D1. Microbiomes: tools to investigate their composition
- D2. Inflammation process: Mechanisms and role of bacteria
- D3. Inflammatory diseases in human and animal health
- D4. Bacteria and inflammation: those that trigger, those that alleviate
- D5. Applications: microbial levers to mitigate inflammatory diseases

+ **Tutor-guided sessions** to develop a research project on a topic related to BactInflam themes.

+ **Round-table** with representatives of the academic and private sectors.
