A. Summary Statistics Tables

A.1. Censuses 1962-2012

Tables S.A.1–S.A.13 provide summary statistics for the regression sample used in the analysis. The regression sample comprises French internal migrant married women aged 30 to 49. The last column in the tables provides OLS coefficients from regressing the relevant characteristic on a migrant status indicator, where the sample also includes non-migrant married women aged 30 to 49. Statistical significance is indicated as follows: *** significant at the 1 percent level, ** significant at the 5 percent level, and * significant at the 10 percent level.

Table S.A.17. Characteristics by Sex and Migration Status GGS 2005 $\,$

Notes: This table presents means for each cultural values index across various groups. A denotes all sexes, M denotes males, and F denotes females. Standard deviations are reported in parentheses, and the number of observations in each group is reported in braces. The means are computed using the sample weights provided in the GGS dataset.

Dependent variable	Military death rate	Employed		lues inde: nale labo		
	(1)	(2)	(3)	(4)	(5)	
Internal migrant	-0.00 [0.00]	0.01 [0.01]	0.05^{***} [0.01]	0.02^{**} [0.01]	$0.01 \\ [0.01]$

Observations	7,343	7,343	7,343	7,343	7,343	
Outcome mean (migrants) Outcome mean (non-migrants)	$\begin{array}{c} 0.14\\ 0.14\end{array}$	$\begin{array}{c} 0.56 \\ 0.57 \end{array}$	$0.70 \\ 0.75$	$0.70 \\ 0.75$	$0.70 \\ 0.75$	

Table S.A.18. Characteristics Across Migration Status GGS 2005

Notes: This table presents OLS coefficients from regressing various outcomes on an indicator for the respondent being an internal migrant. *Educational attainment* contains indicators for primary education (omitted), technical secondary education, high school, higher education, and student. *Other values* contains the cultural values indices relative to religion, marriage, and the family. Standard errors are clustered at the level of the individuals' départements of birth. The estimates are computed using the sample weights provided in the GGS (2005).

*** Significant at the 1 percent level. ** Significant at the 5 percent level.

B. Additional Regression Tables

Tables S.B.1–S.B.13 provide the results from Figures 3 and Appendix Figure B.1 for the *Working* outcome. Tables S.B.14 to S.B.26 provide the results from Appendix Figures B.2 and B.6 for the *Labor force participant* outcome.

Table S.B.11. The Impact of WWI Military Fatalities on FLFP Census 2010

Notes: This table reports the OLS coefficients from estimating equation 1 in column 1, and alternative specifications in columns 2–6. Standard errors are in brackets and are clustered both at the level of respondents' départements of birth and départements of residence. The sample consists of migrant married women aged 30 to 49. The estimates are computed using the sample weights provided in the censuses. See Figure 3 and Figure B.1 notes for more details. See the Data Appendix for details about variables sources and definitions.

	(1)	(2)	(3)	(4)	(5)	(6)	
Military death rate	0.22^{***} [0.05]	0.19^{***} [0.05]	0.19^{***} [0.05]	0.18^{***} [0.05]	0.15^{***} [0.05]	0.22^{***} [0.05]	
Birth year FE	Yes	Yes	Yes	Yes	Yes	Yes	
Birth region FE	Yes	Yes	Yes	Yes	Yes	Yes	
Pre-war controls (1911)	Yes	Yes	Yes	Yes	Yes	Yes	
Residence location FE							
Département	Yes	No	No	Yes	Yes	Yes	
Local labor market	No	Yes	No	No	No	No	
City	No	No	Yes	No	No	No	
Education level FE	No	No	No	Yes	No	No	
Number of children aged $0\!-\!6$	No	No	No	Yes	No	No	
Migration controls	No	No	No	No	Yes	No	
Sample	All	All	All	All	All	1.5th Gen.	
Observations	659,636	659,636	$659,\!632$	659,636	659,636	659,636	
Clusters							
Départements of birth	92	92	92	92	92	92	
Départements of residence	92	92	92	92	92	92	
Mean active	0.91	0.91	0.91	0.91	0.91	0.91	

Table S.B.25. The Impact of WWI Military Fatalities on FLFP Census 2011

Notes: This table reports the OLS coefficients from estimating equation 1 in column 1, and alternative specifications in columns 2–6. Standard errors are in brackets and are clustered both at the level of respondents' départements of birth and départements of residence. The sample consists of migrant married women aged 30 to 49. The estimates are computed using the sample weights provided in the censuses. See Figure B.2 and Figure B.6 notes for more details. See the Data Appendix for details about variables sources and definitions.
