HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

EXPLORING ACHIEVEMENT GOALS AND ONLINE FORMATIVE ASSESSMENT EFFECT ON STUDENTS' PERFORMANCE IN A BLENDED-LEARNING COURSE IN HIGHER EDUCATION

Sacré M., Lafontaine D., & Toczek M.-C.
EQUALE, Université de Liège, Belgique
ACTé, Université Clermont Auvergne, France

The authors acknowledge the support received from the Agence Nationale de la Recherche of the French government through the program "Investissements d'Avenir" (16-IDEX-0001 CAP 20-25).

CONTEXT

- Blended-learning is becoming the norm in higher education (Dziuban, Graham, Moskal, Norberg, & Sicilia, 2018).
- The interest in formative assessment is in line with the work that reveals the testing effect, i.e., the superiority of taking a test on material, compared to re-studying the material (Roediger III, Agarwal, McDaniel, & McDermott, 2011).
- To some extent, research shows correlations between achievement goals and students' performance (Lüftenegger et al., 2016).

RESEARCH QUESTION

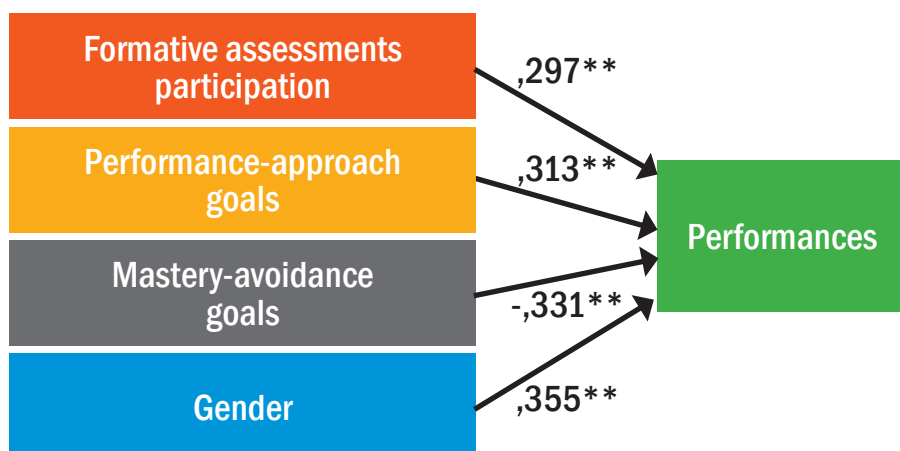

In a blended-learning course,

1. Does participation in formative online assessment enhance students' performance?
2. Do achievement goals have an effect on students' performance?

METHODOLOGY

- Prospective & correlational study
- **46 computer science students**
- **Blended learning course:** mathematics applied to computer graphics
- Data from **23 formative assessments** spread over one semester
- Performance measured in **pretest and post-test**
- **Achievement goals** measured before the course

RESULTS

VARIANCE EXPLAINED BY EACH VARIABLE

adjusted $R^2=48.6\%$

CONCLUSIONS

- The more students participated in formative assessment throughout the semester, the higher their performance
→ **Influence of the testing effect or student engagement ?**
- Positive effect from performance-approach goals : students who want to do better than others are likely to do better than others.
- Negative effect from mastery-avoidance goals : students afraid of failure will more probably fail.
- Girls perform better than boys and combat the stereotype threat related to mathematics and ICTs.
→ **Influence from the specific context of blended-learning ?**
