HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Correction to: *Malar J* (2020) 19:188

<https://doi.org/10.1186/s12936-020-03261-1>

Following publication of the original article [1], the authors flagged that there is an error present in Table 5.

As a result of an error in the statistical program used to categorize women based on 'gravidity', some 'secundigravidae' have been (erroneously) classified as 'multigravidae'.

Consequently, the performance values based on gravidity, which are secondary results, are incorrect in the table.

To amend this error, the corrected Table 5 is provided in this correction.

Finally, in addition to the above, the author name Nicaise Tuikue Ndam has been misspelled in the article as 'Nicaise Tuike Ndam'; please find the corrected name in this correction.

The authors apologize for any inconvenience caused.

The original article can be found online at <https://doi.org/10.1186/s12936-020-03261-1>.

Table 5 Performance of uRDT and cRDT against qPCR, according to the trimester of pregnancy, gravidity, and presence of fever

	uRDT	cRDT	P value^a
Sensitivity (95% CI)			
1st trimester	57.0% (47.1–66.5)	38.3% (29.1–48.2)	<10 ⁻³
3rd trimester	64.9% (47.5–79.8)	54.1% (36.9–70.5)	0.05
Delivery (peripheral blood)	83.3% (58.6–96.4)	61.1% (35.7–82.7)	0.05
Delivery (placental blood)	40.0% (12.2–73.8)	40.0% (12.2–73.8)	–
Primi and Secundi-gravidae	57.4% (42.2–71.7)	44.7% (30.2–59.9)	0.01
Multigravidae (3+)	61.6% (52.5–70.2)	44.0% (35.1–53.2)	<10 ⁻³
Asymptomatic	60.8% (52.3–68.9)	43.4% (35.1–51.9)	<10 ⁻³
Symptomatic*	66.7% (41.0–86.7)	50.0% (26.0–74.0)	0.08
Specificity (95% CI)			
1st trimester	91.5% (86.9–94.9)	95.7% (92.1–98.0)	0.003
3rd trimester	95.7% (92.0–98.0)	97.1% (93.8–99.0)	0.08
Delivery (peripheral blood)	96.4% (92.2–98.7)	97.6% (94.0–99.3)	0.16
Delivery (placental blood)	91.3% (86.3–94.9)	92.4% (87.6–95.8)	0.41
Primi and Secundi-gravidae	93.5% (88.5–96.9)	96.1% (91.8–98.6)	0.04
Multigravidae (3+)	93.7% (91.4–95.5)	95.6% (93.7–97.1)	0.003
Asymptomatic	94.6% (92.3–96.4)	97.1% (95.3–98.4)	<10 ⁻³
Symptomatic ^b	92.2% (82.7–97.4)	93.7% (84.8–98.3)	0.32

RECIPAL study, 2014–2017

^a Comparison of uRDT and cRDT performance using McNemar test for matched pairs. Exact binomial confidence intervals were computed

^b Presence of fever (axillary temperature $\geq 37.5^{\circ}\text{C}$) or history of fever in the preceding 24 h, whether or not infected with malaria

Ready to submit your research? Choose BMC and benefit from:

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100M website views per year

At BMC, research is always in progress.
