- Treatment choice (TC) is stressful for patients with chronic kidney disease (CKD) (Harwood & Clarke, 2013).
- Guidelines advise to proceed to a shared decision-making (Haute Autorité de Santé, 2017).
- Individual (e.g., way of life) but also social (e.g., meeting with peers) and family factors (e.g., sharing information) influence decision-making (Morton et al., 2010; Valson et al., 2018)
- Most studies are retrospective, question exclusively patients and focus on the elderly.

OBJECTIFS

- Explore patients and close others' experience of advanced CKD
- Investigate how they view treatment decision-making.

METHODS

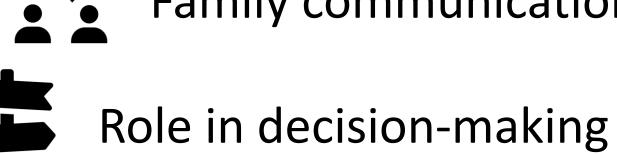

Semi-structured individual interviews

Illness experience

Family communication

Lexicometric analysis: Application of statistical analyses on a text corpus

RESULTS

« I hope that when I will

see [the nephrologist] on

the 30th, she won't tell me:

« We are at this stage. »

everytime I go to see her. »

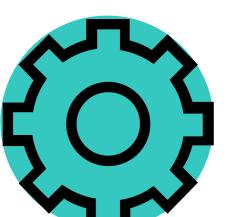

« He realizes that solutions

face together. »

worries

me

Rhythm of the illness

Thinking about CKD

Considering dialysis

Family and transplantation

« Apparently there are different types of dialysis, one requires having a pipe in the belly etc. »

« My son has done the examinations and he is compatible but don't want it. No, no, he is too young, he's 25. I do not want to, he has his life ahead of him. »

« I don't want to think about it, I don't want to anticipate, what will happen. It will be difficult enough when the time comes. »

> « It's his choice of course! I don't think I have had an influence on him. I haven't sought to have one. »

« The surgeon who

had performed the surgery at the time was Dr. [Name], not to mention names. »

exist and that, indeed they will be complicated time Facing daily life but, but times that we will with CKD

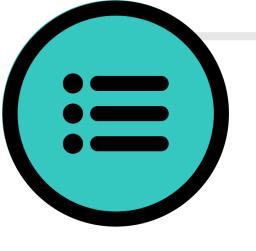

Listeners with an opinion

Story-telling and

monitoring

Emotions behind facts

« It's a source of worry. Among others. Because I always have sources of worry because of the rest. »

- Cognitive avoidance about renal replacement the rapy
- TC does not seem relevant to patients' life today according to participants' discourse.

is common among patients.

- Family member, partners especially, face CKD with patients by keeping a positive outlook on the future.
- CONCLUSION
- According to participants, family has little influence on TC except regarding living-donor transplantation.
- However, family members do express an opinion regarding treatment choice.
- Thematic analysis on subgroups could highlight differences between participants.
