Submitted on 2 Apr 2021

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Foreword

This volume presents a series of revised papers selected from workshops organized by IFIP TC 13 Working Groups (WGs) during the 17th IFIP TC13 International Conference on Human-Computer Interaction, INTERACT 2019, which was held in September 2019 in Paphos, Cyprus. INTERACT 2019 was hosted by the Cyprus University of Technology (CUT) and Tallinn University. The conference was co-sponsored by the Research Centre on Interactive media, Smart systems and Emerging technologies (RISE) and Springer. It was in cooperation with ACM and ACM SIGCHI.

The contents of this volume vary from descriptions of design products to design solutions with users' needs at heart. For both researchers and designers in the field of human-computer interaction (HCI), the question is to design products and services that would have a direct impact on their users. Thus, in the era of emerging economies, HCI contributions in terms for products and services are timely and necessary. The IFIP TC 13 WGs brings together different facets of HCI with an eye to discuss practices and strategies employed by practitioners and instructional designers as well as their impact on the design of products and services.

This post-proceeding presents the outcome of a thorough and competitive selection process which started with the selection of workshops for INTERACT 2019. The IFIP TC13 WGs were challenged to propose workshops that match the main topics of the INTERACT conference. We were open to welcome workshops in diverse formats, including paper and poster presentations followed by forum discussions with participants. The selection process of workshops was juried by workshop co-chairs and members of the International Program Committee of INTERACT 2019.

Workshops preceded the main conference, running September 2–6, 2019. Only participants that submitted contributions were allowed to attend workshops. However, a dedicated session called “Workshops Summary Section” was held during the last day of INTERACT 2019 so that workshop organizers and contributors could report the outcomes of each workshop, receive comments, and interact with participants of the main conference.

Accepted workshops were allowed to establish their own reviewing process. However, to ensure the scientific quality of these post-proceedings we requested that papers selected for this volume should be peer reviewed by an international committee. After the workshop, authors were requested to revise their contributions including the comments and remarks they received during the event. Extended versions were then scrutinized again by the editors of the present volume.

The selected papers show advances in the field of HCI and they demonstrate the maturity of the work performed by IFIP TC13 WGs. We have selected 12 papers that are organized in 3 sections that correspond to IFIP TC13 workshops at INTERACT 2019.

It is important to mention that IFIP TC13 WGs are open to welcome new members. The full list of IFIP TC13 WGs is available at <http://ifip-tc13.org/working-groups/> and we invite the interested readers to contact the officers for further information on how to get enrolled in WG activities such as the workshops organized at the INTERACT conference.

IFIP TC13 - <http://ifip-tc13.org/>

Established in 1989, the International Federation for Information Processing Technical Committee on Human–Computer Interaction (IFIP TC 13) is an international committee of 35 member national societies and 10 Working Groups (WGs), representing specialists of the various disciplines contributing to the field of Human-Computer Interaction (HCI). This includes (among others) human factors, ergonomics, cognitive science, computer science, and design. INTERACT is its flagship conference of IFIP TC 13, staged biennially in different countries in the world. The first INTERACT conference was held in 1984 running triennially and became a biennial event in 1993.

IFIP TC 13 aims to develop the science, technology, and societal aspects of HCI by encouraging empirical research; promoting the use of knowledge and methods from the human sciences in design and evaluation of computer systems; promoting better understanding of the relation between formal design methods and system usability and acceptability; developing guidelines, models, and methods by which designers may provide better human-oriented computer systems; and cooperating with other groups, inside and outside IFIP, to promote user-orientation and humanization in system design. Thus, TC 13 seeks to improve interactions between people and computers, to encourage the growth of HCI research and its practice in industry, and to disseminate these benefits worldwide.

The main orientation is to place the users at the center of the development process. Areas of study include: the problems people face when interacting with computers; the impact of technology deployment on people in individual and organizational contexts; the determinants of utility, usability, acceptability, and user experience; the appropriate allocation of tasks between computers and users especially in the case of automation; modeling the user, their tasks, and the interactive system to aid better system design; and harmonizing the computer to user characteristics and needs.

While the scope is thus set wide, with a tendency toward general principles rather than particular systems, it is recognized that progress will only be achieved through both general studies to advance theoretical understanding and specific studies on practical issues (e.g., interface design standards, software system resilience, documentation, training material, appropriateness of alternative interaction technologies, guidelines, the problems of integrating multimedia systems to match system needs and organizational practices, etc.).

In 2015, TC 13 approved the creation of a Steering Committee (SC) for the INTERACT conference. The SC is responsible for:

- Promoting and maintaining the INTERACT conference as the premiere venue for researchers and practitioners interested in the topics of the conference (this requires a refinement of the topics above)
- Ensuring the highest quality for the contents of the event

- Setting up the bidding process to handle the future INTERACT conferences (the decision is made up at TC 13 level)
- Providing advice to the current and future chairs and organizers of the INTERACT conference
- Providing data, tools, and documents about previous conferences to the future conference organizers
- Selecting the reviewing system to be used throughout the conference (as this impacts the entire set of reviewers)
- Resolving general issues involved with the INTERACT conference
- Capitalizing history (good and bad practices)

In 1999, TC 13 initiated a special IFIP Award, the Brian Shackel Award, for the most outstanding contribution in the form of a refereed paper submitted to and delivered at each INTERACT. The award draws attention to the need for a comprehensive human-centered approach in the design and use of information technology in which the human and social implications have been taken into account. In 2007 IFIP TC 13 also launched an Accessibility Award to recognize an outstanding contribution in HCI with international impact dedicated to the field of accessibility for disabled users. In 2013 IFIP TC 13 launched the Interaction Design for International Development (IDID) Award that recognizes the most outstanding contribution to the application of interactive systems for social and economic development of people in developing countries. Since the process to decide the award takes place after papers are sent to publisher for publication, the awards are not identified in the proceedings.

IFIP TC 13 also recognizes pioneers in the area of HCI. An IFIP TC 13 Pioneer is one who, through active participation in IFIP Technical Committees or related IFIP groups, has made outstanding contributions to the educational, theoretical, technical, commercial, or professional aspects of analysis, design, construction, evaluation, and use of interactive systems. IFIP TC 13 pioneers are appointed annually and awards are handed over at the INTERACT conference.

IFIP TC 13 stimulates working events and activities through its WGs. WGs consist of HCI experts from many countries, who seek to expand knowledge and find solutions to HCI issues and concerns within their domains. New WGs are formed as areas of significance in HCI arise.

Further information is available at the IFIP TC13 website: <http://ifip-tc13.org/>.

WG 13.5 - Resilience, Reliability, Safety and Human Error in System Development

The Working Group 13.5 aims to support practitioners, regulators, and researchers to develop leading edge techniques in hazard analysis and the safety engineering of computer-based systems.

Chair

Christopher Johnson University of Glasgow, UK

Vice-chairs

Michael Feary NASA, Ames Research Center, USA
Asaf Degani General Motors R&D, Israel

Secretary

Philippe Palanque ICS-IRIT, University Paul Sabatier, France

WG13.6 - Human-Work Interaction Design (HWID)

The Working Group 13.6 aims to encourage empirical studies and conceptualizations of the interaction among humans, their variegated social contexts and the technology they use both within and across these contexts. It also aims to promote the use of knowledge, concepts, methods, and techniques that enables user studies to procure a better apprehension of the complex interplay between individual, social, and organizational contexts and thereby a better understanding of how and why people work in the ways they do.

Chair

Barbara Rita Barricelli Università degli Studi di Milano, Italy

Vice-chairs

Pedro Campos University of Madeira, Portugal
Torkil Clemmensen Copenhagen Business School, Denmark
José Abdelnour Nocera University of West London, UK and ITI/Larsys, Portugal
Arminda Guerra Lopes Polytechnic Institute of Castelo Branco, Portugal
Dinesh Katre Centre for Development of Advanced Computing, India

Secretary

Frederica Gonçalves University of Madeira, Portugal

WG 13.7 - Human-Computer Interaction and Visualization (HCIV)

The Working Group 13.7 aims to provide a creative work environment for performing innovative research at the interface between Human-Computer Interaction and Visualization.

Chair

Peter Dannenmann RheinMain University of Applied Sciences, Germany

Vice-chairs

Gerrit van der Veer Association for Computing Machinery (ACM), USA
Nahum Gershon The MITRE Corporation, USA

Secretary

Achim Ebert University of Kaiserslautern, Germany

WG 13.8 - Interaction Design and International Development

The aims of the Working Group 13.8 is to support and develop the research, practice, and education capabilities of HCI in institutions and organizations based around the world taking into account their diverse local needs and cultural perspectives.

Chair

José Abdelnour Nocera University of West London, UK and ITI/Larsys, Portugal

Vice-chairs

Andy Dearden Sheffield Hallam University, UK
Torkil Clemmensen Copenhagen Business School, Denmark
Christian Sturm Hamm-Lippstadt University of Applied Sciences, Germany

Secretary

Anirudha Joshi IIT Bombay, India

WG 13.9 - Interaction Design and Children

The Working Group 13.9 aims to support practitioners, regulators, and researchers to develop the study of interaction design and children across international contexts.

Chair

Janet Read University of Central Lancashire, UK

Vice-chair

Panos Markopoulos Eindhoven University of Technology, The Netherlands

Secretary

Matthew Horton University of Central Lancashire, UK

WG 13.10 - Human-Centred Technology for Sustainability

The Working Group 13.10 aims to promote research, design, development, evaluation, and deployment of human-centered technology to encourage sustainable use of resources in various domains. These technologies would include interaction techniques, interfaces, and visualizations for applications, tools, games, services, and devices.

Chair

Masood Masoodian Aalto University, Finland

Vice-chairs

Elisabeth André Augsburg University, Germany
Nuno J. Nunes University of Madeira, Portugal

Secretary

Thomas Rist University of Applied Sciences Augsburg, Germany
