Supplementary Data. Table 5: combinations of substances detected in individuals with two or three positive tests for the same blood sample. For each substance, data are expressed as the number and then as a percentage of the number of drivers who consumed two or three substances. By way of an example: " $N = 399 \ (80.93\%)$ " for alcohol + cannabis consumption means that the 399 drivers with alcohol + cannabis accounted for 80.93% of those who had consumed alcohol plus one or two other substances.

Drug	2 nd combined drug	N (%)	3 rd combined drug	N (%)
Alcohol	None	3850	-	
		399 (80.93%)	Cocaine	42 (8.52%)
	Cannabis		Amphetamines	10 (2.03%)
