HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Corrigendum

Corrigendum to “*Ex situ* environmental risk assessment of polluted soils using threshold guide values for the land snail *Cantareus aspersus*” [Sci. Total Environ. 721 (2020) 137789]

The authors regret that the printed version of the above article contained a number of errors. The correct and final version follows. The authors would like to correct the toxicity point of the polychlorobiphenyls (PCBs) in Table 1 with the value of 600 (ATSDR, 2015) instead of 10. Consecutively the risk coefficients

(RC) of PCBs to the only soil for which PCB transfers were found, the soil N2 (Table 4), are: RC PCB 118 = 2376, RC PCB 153 = 2430, ERITPCB = 4806. This change does not alter the discussion and the conclusion of this study. The authors would like to apologize for any inconvenience caused.
