HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

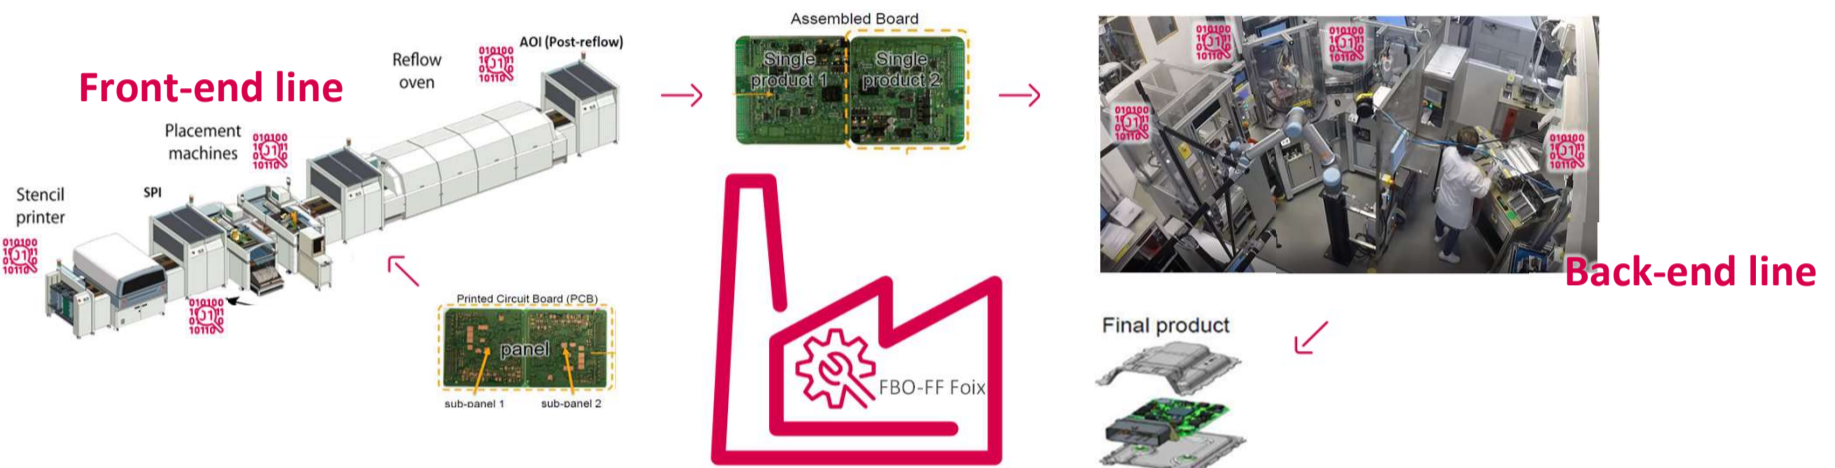

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Electronic board production process knowledge extraction for global optimization

Le Toan Duong (PhD)

Supervisors: L. Travé-Massuyès, A. Subias, N. Barbosa

- Assess product quality from the analysis of event logs
- Optimize the production process to reduce production cost and improve product quality

Penalty index of a batch b_j of phase ϕ_k

$$p_k(b_j) = \sum_{\alpha=1}^{m_k} r_{\alpha|k}^j \times \tilde{p}_{\alpha|k}$$

3. Product investigation

Good quality

Data source: event logs

Source: MES

```

1. Process discovering

Timed process model construction

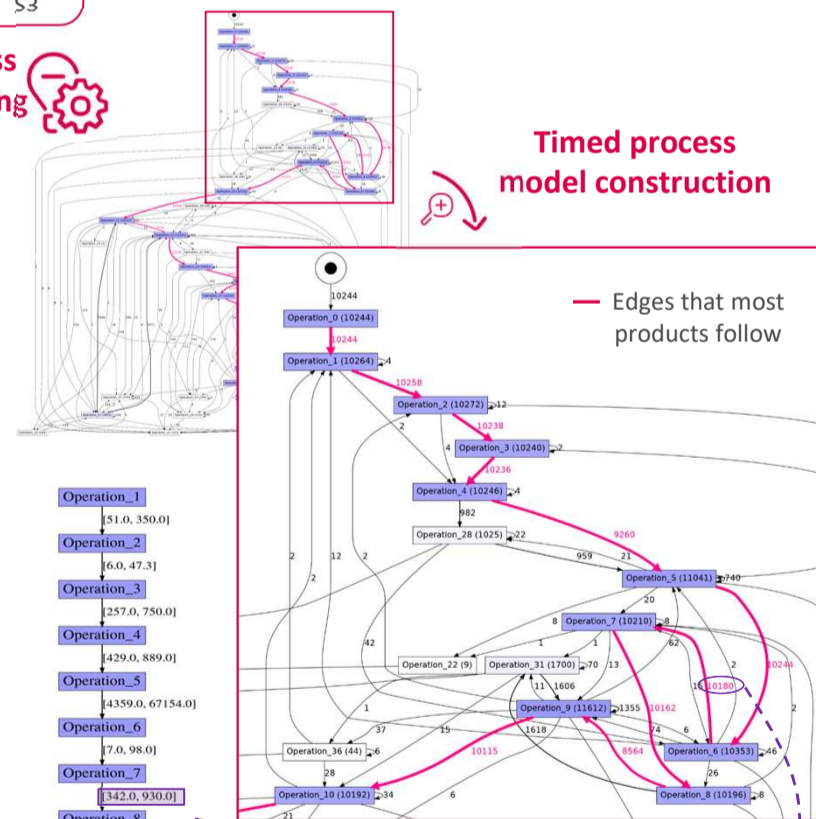

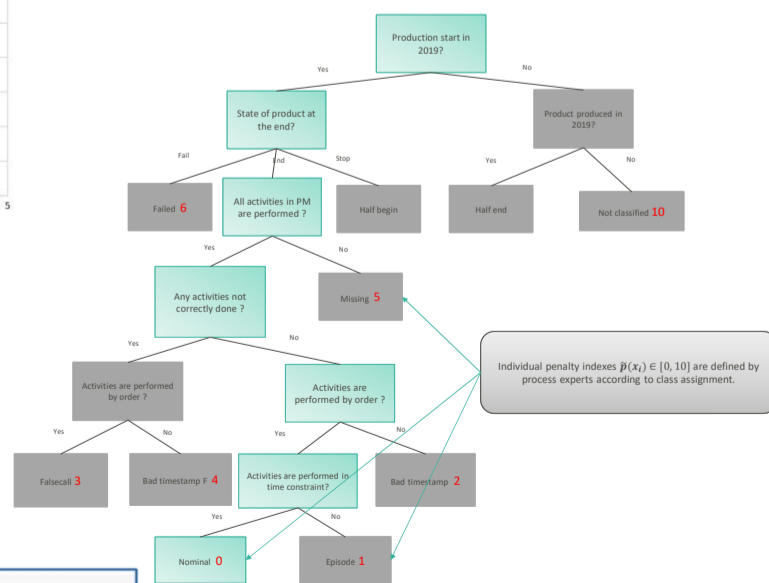

Global penalty index of product x_i

$$p_g(x_i) = \sum_{k=1}^{|\phi|} \gamma_k \times (\lambda \times \tilde{p}_k(x_i) + (1 - \lambda) \times p_k(b_j))$$

$$\lambda, \gamma \in [0, 1], \sum_{k=1}^{|\phi|} \gamma_k = 1$$

2. Conformance checking

Transfer time extraction

- Parameter adjustment
- Work-in-progress (WIP) management
- WIP prediction models

Want to know more about it?
Le Toan Duong, Louise Travé-Massuyès, Audine Subias, and Nathalie Barbosa Roa. Assessing product quality from the production process logs. The International Journal of Advanced Manufacturing Technology, 117(5):1615–1631, 2021.

Other collaborations with Vitesco technologies

- Distributed data-based diagnosis and prognosis of equipment and subset toolings
- Predictive maintenance and diagnosis of cobots
