## Supplementary methods

Categorization of Corine Land Cover subtypes into urban, agricultural, forest, natural and water area categories:

- urban area: “Continuous urban fabric”, “Discontinuous urban fabric”, “Industrial or commercial units”, “Road and rail networks and associated land”, “Port areas”, “Airports”, “Mineral extraction sites”, “Dump sites”, “Construction sites”, “Green urban areas”, “Sport and leisure facilities”;
- agricultural area: “Non-irrigated arable land”, “Permanently irrigated land”, “Rice fields”, “Vineyards”, “Fruit trees and berry plantations”, “Olive groves”, “Pastures”, “Annual crops associated with permanent crops”, “Complex cultivation patterns”, “Land principally occupied by agriculture, with significant areas of natural vegetation”, “Agro-forestry areas”;
- forest area: “Broad-leaved forest”, “Coniferous forest”, and “Mixed forest”;
- natural area: “Natural grasslands”, “Moors and heathland”, “Sclerophyllous vegetation”, “Transitional woodland-shrub”, “Beaches, dunes, sands”, “Bare rocks”, “Sparsely vegetated areas”, “Burnt areas”;
- water: “Glaciers and perpetual snow”, “Inland marshes”, “Peat bogs”, “Salt marshes”, “Salines”, “Intertidal flats”, “Water courses”, “Water bodies”, “Coastal lagoons”, “Estuaries”, and “Sea and ocean”.

## Supplementary tables

**Table S1: descriptive statistics of the metal concentrations in mosses in the two regions.** Mean, standard deviation (SD), 25<sup>th</sup> percentile (p25), 50<sup>th</sup> percentile (p50), and 75<sup>th</sup> percentile (p75). These values correspond to the graphics in Figure 2. All units are in  $\mu\text{g.g}^{-1}$  of dry matter. N=77 in Paris and N=51 in Lyon.

Metal	Region	Mean	SD	p25	p50	p75
