HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Lyon Metropolis realistic trip data set including home to work trips with private vehicles during the morning peak

Mostafa Ameli^a, Negin Alisoltani^{b,c}, Ludovic Leclercq^b

^a Univ. Gustave Eiffel, COSYS-GRETTIA, Paris, France

^b Univ. Gustave Eiffel, ENTPR, LICIT-ECO7, Lyon, France

^c GeoTwin SAS, 17 Rue Campagne Première, 75014 Paris, France

This data set is generated based on raw data collected by LICIT laboratory (<https://licit-lyon.eu/>) in Lyon reported in the study of Krug J, Burianne A, and Leclercq L: Reconstituting demand patterns of the city of Lyon by using multiple GIS data sources, technical report, University of Lyon, ENTPE, LICIT. The demand profile is based on the results of EMD (Enquetes menage déplacements) to generate the OD matrix. The trip-based OD matrix is the transformation in individual trips of the zonal OD matrix.

Description of the demand profile:

The data contains the home to work trips traveling by private vehicles, including departure time, arrival time, and trip length of all users in Lyon metropolis traffic network. Lyon is the second-largest urban area of France with an area of 80 km². The city is located in the south of Paris and is close to other mega-cities in France and Switzerland (Marseille, Grenoble, and Geneva). The trip set contains all trip come from outside and travel to outside the city. This data set represents the demand dynamics, which is typical for a peak period from 6:30 AM to 12 PM. The number of trips during this period is 99,138. The geographical coordinates system is RGF93 / Lambert-93. This dataset is used in [1] and [2].

Data files:

The index of trips are determined by the row number.

- Lyon_DataSet.csv: include the following information about each trip:
 - Age (Age category of the user)
 - Motif_Origine (Origin tag)
 - Motif_Destination (Destination tag)
 - Origine (Origin) [The geographic coordinates can be translated by Nodes_Translation file]
 - Destination [The geographic coordinates can be translated by Nodes_Translation file]
 - Heure_Depart (Departure time) [hh:mm:ss]
 - Heure_Arrivee (Arrival time) [hh:mm:ss]
 - Trip_Distance [meter]
- Nodes_Translation.csv
 - Node (Node Name)
 - x (Geographic geographical coordinates (X))
 - y (Geographic geographical coordinates (Y))
