Appendix S1: Curation and transformation of the interaction matrix

In order to produce an interaction matrix, in which observations are resources and variables are consumers, the original dataset should be checked. First, for each sample, the taxa having the highest number of reads were set as the consumer. This assumption was confirmed in most of the cases (the specimen collected in the tube was the consumer and produced the highest number of reads). However due to the simultaneous detection of possible preys and parasitoids from the specimen sampled and the contrasted amplification rates between taxonomic groups (Alberdi et al. 2018), this was not always the case. Consequently, a second step of data manual validation was required on each sample (Supplementary Figure S2) in order to 1) verify whether the consumer was correctly defined according to the observation from the field, 2) add the source plant for herbivorous arthropods, 3) define the status of the taxa simultaneously amplified with the consumer (prey, parasitoid or contamination). The next step consisted in removing cannibalistic interactions (i. e. delete reads at the intersection of a same source and consumer species). Indeed, DNA-based methods are not suitable to disentangle predator and prey sequences (Taberlet et al. 2018). As metabarcoding neither provides quantitative information about the trophic links (Deagle et al. 2019), the numbers of reads were converted to binary information, then occurrence frequencies of interactions between a pair of consumer/prey species were calculated as the percentage of consumer samples positive for the prey over the total number of consumer sampled in the dataset. All analyses were carried out under R version 3.5.2 (R Core Team 2018).

Table S3: List of the taxa included in the sub-network (Figure 2)

Node ID	Taxon	Order (Family)	Trophic level
1	<i>Agapanthia cardui</i>	Coleoptera (Cerambycidae)	Herbivore
2	<i>Agapanthia pannonica</i>	Coleoptera (Cerambycidae)	Herbivore
3	<i>Agromyzidae</i>	Diptera (Agromyzidae)	Herbivore
4	<i>Alloxysta consobrina</i>	Hymeoptera (Figitidae)	Natural enemy (parasitoid)
5	<i>Anthemis altissima</i>	Asterales (Asteraceae)	Plant
6	<i>Aphididae</i>	Hemiptera (Aphididae)	Herbivore
7	<i>Aphidius ervi</i>	Hemiptera (Aphididae)	Herbivore
8	<i>Aphidius sonchi</i>	Hemiptera (Aphididae)	Herbivore
9	<i>Aphis craccivora</i>	Hemiptera (Aphididae)	Herbivore
10	<i>Aphis fabae</i>	Hemiptera (Aphididae)	Herbivore
11	<i>Avena sp.</i>	Poales (Poaceae)	Plant
12	<i>Bracon radialis</i>	Hymeoptera (Braconidae)	Natural enemy (parasitoid)
13	<i>Bracon sp.</i>	Hymeoptera (Braconidae)	Natural enemy (parasitoid)
14	<i>Bracon telengai</i>	Hymeoptera (Braconidae)	Natural enemy (parasitoid)
15	<i>Braconidae</i>	Hymeoptera (Braconidae)	Natural enemy (parasitoid)
16	<i>Brassicogethes aeneus</i>	Coleoptera (Nitidulidae)	Herbivore
17	<i>Campiglossa producta</i>	Diptera (Tephritidae)	Herbivore
18	<i>Carduus pycnocephalus</i>	Asterales (Asteraceae)	Plant
19	<i>Cerastium glomeratum</i>	Caryophyllales (Caryophyllaceae)	Plant
20	<i>Cicadella viridis</i>	Hemiptera (Cicadellidae)	Herbivore
21	<i>Cichorium intybus</i>	Asterales (Asteraceae)	Plant
22	<i>Cirsium arvense</i>	Asterales (Asteraceae)	Plant
23	<i>Cirsium vulgare</i>	Asterales (Asteraceae)	Plant
24	<i>Closterotomus norvegicus</i>	Hemiptera (Miridae)	Herbivore
25	<i>Cnephasia stephensiana</i>	Lepidoptera (Tortricidae)	Herbivore
26	<i>Coccinella septempunctata</i>	Coleoptera (Coccinellidae)	Natural enemy (predator)
27	<i>Coreus marginatus</i>	Hemiptera (Coreidae)	Herbivore
28	<i>Crepis foetida</i>	Asterales (Asteraceae)	Plant
29	<i>Crepis vesicaria</i>	Asterales (Asteraceae)	Plant
30	<i>Curculionidae</i>	Coleoptera (Curculionidae)	Herbivore
31	<i>Cynipidae</i>	Hymenoptera (Cynipidae)	Herbivore
32	<i>Dacnusa maculipes</i>	Hymenoptera (Braconidae)	Natural enemy (parasitoid)
33	<i>Dasytes tristiculus</i>	Coleoptera (Melyridae)	Herbivore
34	<i>Diadegma erucator</i>	Hymenoptera (Ichneumonidae)	Natural enemy (parasitoid)
35	<i>Dicot unknown</i>	/	Plant
36	<i>Diplazon tibiatorius</i>	Hymenoptera (Ichneumonidae)	Natural enemy (parasitoid)
37	<i>Dolycoris baccarum</i>	Hemiptera (Pentatomidae)	Herbivore
38	<i>Ensina sonchi</i>	Diptera (Tephritidae)	Herbivore
39	<i>Ephedrus sp.</i>	Hymenoptera (Braconidae)	Natural enemy (parasitoid)
40	<i>Episyrrhus balteatus</i>	Diptera (Syrphidae)	Natural enemy (predator)
41	<i>Erigeron sp.</i>	Asterales (Asteraceae)	Plant
42	<i>Euphorbia helioscopia</i>	Malpighiales (Euphorbaceae)	Plant

43	<i>Geranium rotundifolium</i>	Geriales (Geraniaceae)	Plant
44	<i>Geranium sp.</i>	Geriales (Geraniaceae)	Plant
45	<i>Hecatera dysodea</i>	Lepidoptera (Noctuidae)	Herbivore
46	<i>Heliophanus cupreus</i>	Araneae (Saltividae)	Natural enemy (predator)
47	<i>Heliophanus sp.</i>	Araneae (Saltividae)	Natural enemy (predator)
48	<i>Hordeum murinum</i>	Poales (Poaceae)	Plant
49	<i>Hyalopterus pruni</i>	Hemiptera (Aphididae)	Herbivore
50	<i>Hypericum perforatum</i>	Theales (Clusiaceae)	Plant
51	<i>Hyperomyzus lactucae</i>	Hemiptera (Aphididae)	Herbivore
52	<i>Hypochaeris radicata</i>	Asterales (Asteraceae)	Plant
53	<i>Knautia arvensis</i>	Dipsacales (Dipsacaceae)	Plant
54	<i>Kochiura aulica</i>	Araneae (Theridiidae)	Natural enemy (predator)
55	<i>Lactuca serriola</i>	Asterales (Asteraceae)	Plant
56	<i>Lathyrus sp.</i>	Fabales (Fabaceae)	Plant
57	<i>Lepidargyrus ancorifer</i>	Hemiptera (Miridae)	Herbivore
58	<i>Lepidium draba</i>	Capparales (Brassicaceae)	Plant
59	<i>Leptophyes punctatissima</i>	Orthoptera (Tettigoniidae)	Natural enemy (predator)
60	<i>Liorhyssus hyalinus</i>	Hemiptera (Rhopalidae)	Omnivore
61	<i>Lipolexis gracilis</i>	Hymenoptera (Braconidae)	Natural enemy (parasitoid)
62	<i>Liriomyza sonchi</i>	Diptera (Agromyzidae)	Herbivore
63	<i>Lixus punctiventris</i>	Coleoptera (Curculionidae)	Herbivore
64	<i>Lolium sp.</i>	Poales (Poaceae)	Plant
65	<i>Lygaeus equestris</i>	Hemiptera (Lygaeidae)	Omnivore
66	<i>Macrosiphum rosae</i>	Hemiptera (Aphididae)	Herbivore
67	<i>Medicago orbicularis</i>	Fabales (Fabaceae)	Plant
68	<i>Microplitis sp.</i>	Hymenoptera (Braconidae)	Natural enemy (parasitoid)
69	<i>Miridae</i>	Hemiptera (Miridae)	Omnivore
70	<i>Misumena vatia</i>	Araneae (Thomisidae)	Omnivore
71	<i>Neoscona adianta</i>	Araneae (Araneidae)	Omnivore
72	<i>Nezara viridula</i>	Hemiptera (Pentatomidae)	Herbivore
73	<i>Nysius cymoides</i>	Hemiptera (Orsillidae)	Omnivore
74	<i>Oedemera crassipes</i>	Coleoptera (Oedemeridae)	Herbivore
75	<i>Oedemera flavipes</i>	Coleoptera (Oedemeridae)	Herbivore
76	<i>Ophiomyia cunctata (beckeri)</i>	Diptera (Agromyzidae)	Herbivore
77	<i>Opiinae</i>	Hymenoptera (Braconidae)	Natural enemy (parasitoid)
78	<i>Orius sp.</i>	Hemiptera (Anthocoridae)	Herbivore
79	<i>Papaver rhoes</i>	Ranunculales (Papaveraceae)	Plant
80	<i>Philaenus sp.</i>	Hemiptera (Aphrophoridae)	Herbivore
81	<i>Philaenus spumarius</i>	Hemiptera (Aphrophoridae)	Herbivore
82	<i>Phytomyza horticola (syngenesiae)</i>	Diptera (Agromyzidae)	Herbivore
83	<i>Phytomyza lateralis (cichorii)</i>	Diptera (Agromyzidae)	Herbivore
84	<i>Picris echioptera</i>	Asterales (Asteraceae)	Plant
85	<i>Plantago lanceolata</i>	Lamiales (Plantaginaceae)	Plant
86	<i>Platycheirus scutatus</i>	Diptera (Syrphidae)	Natural enemy (predator)

Supplementary Figures

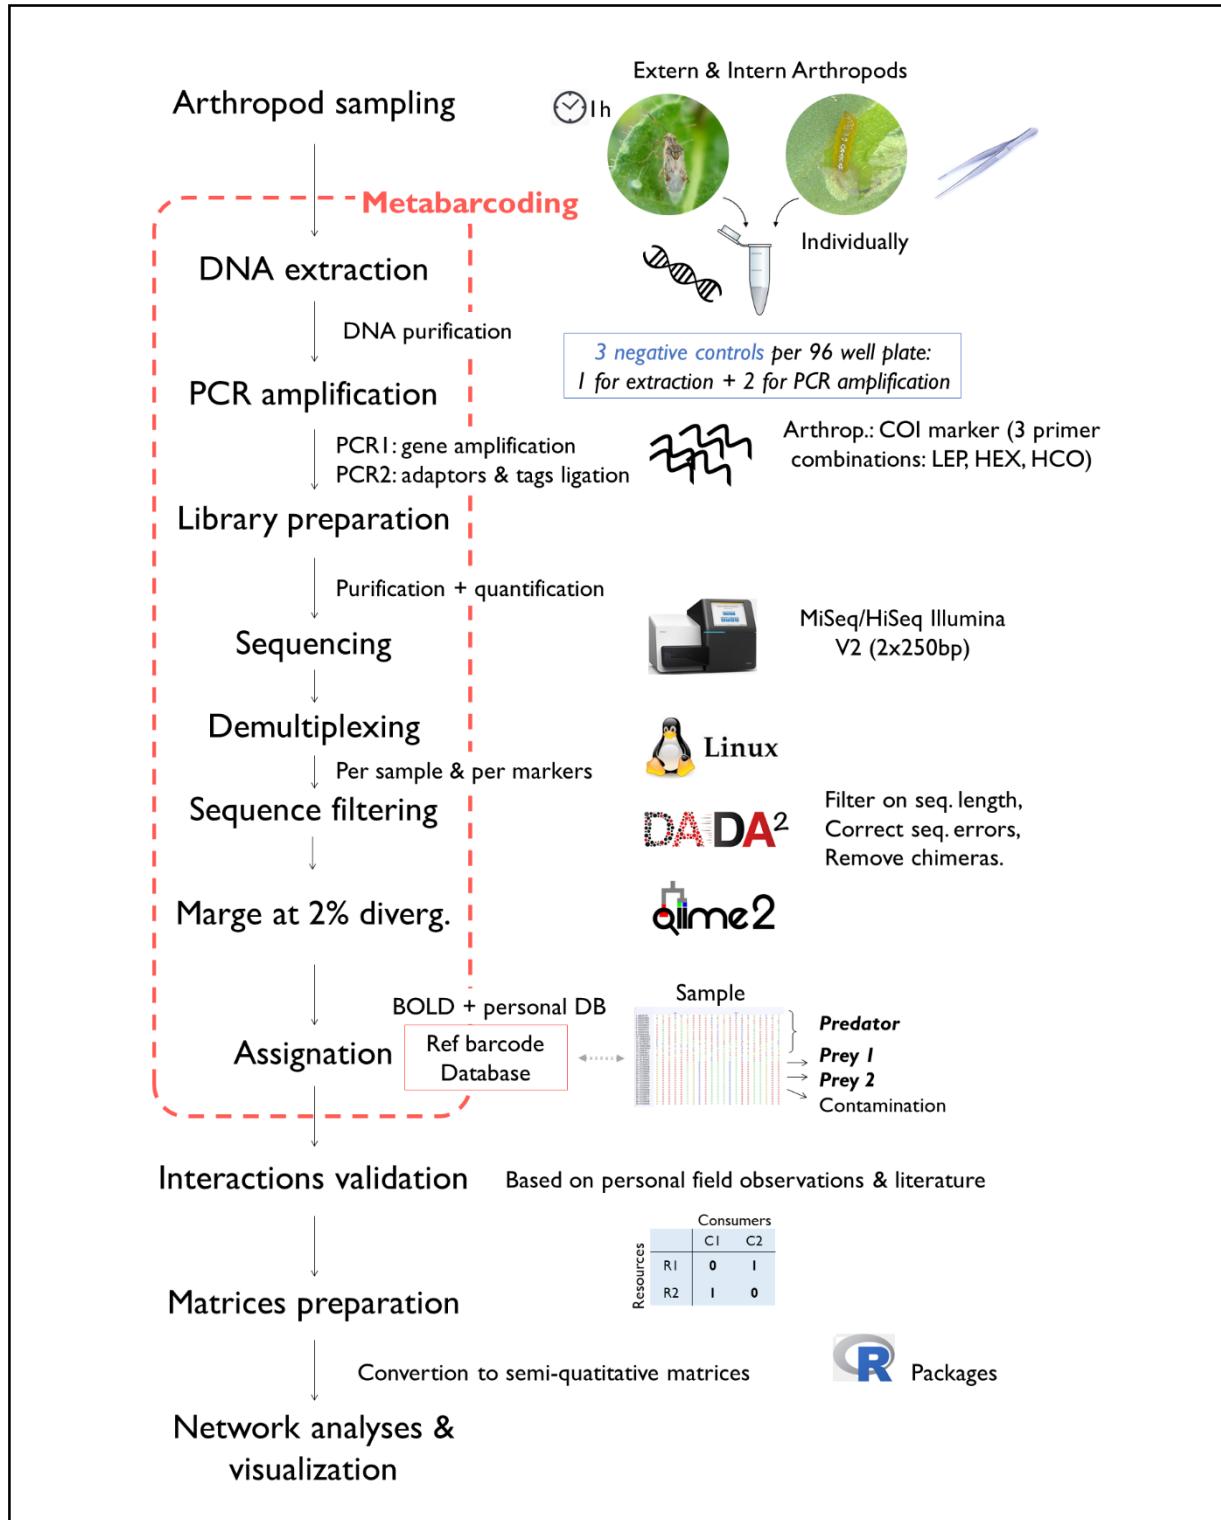

Figure S1: Overview of the entire process for the reconstruction of interactions between plants, herbivores and natural enemies.

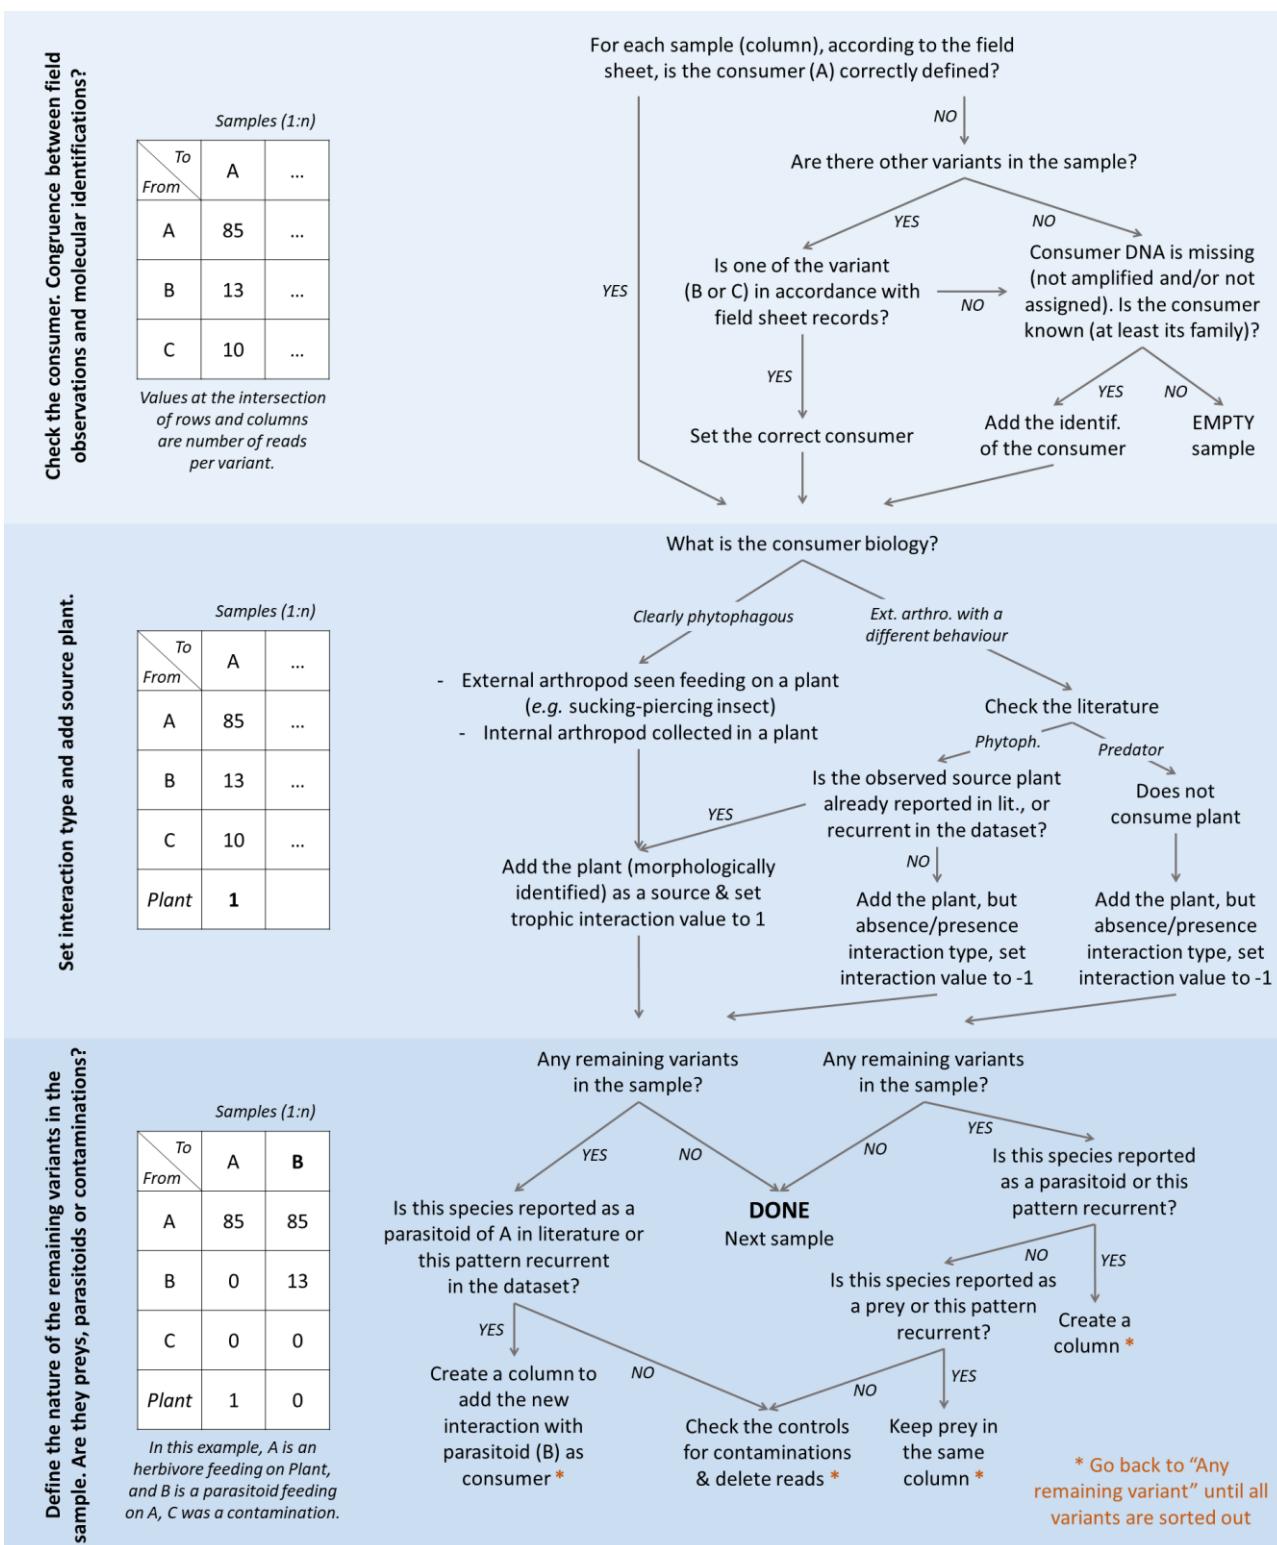

Figure S2: Flow diagram presenting the process followed for the transformation of raw data from sequencing into an adjacency matrix.

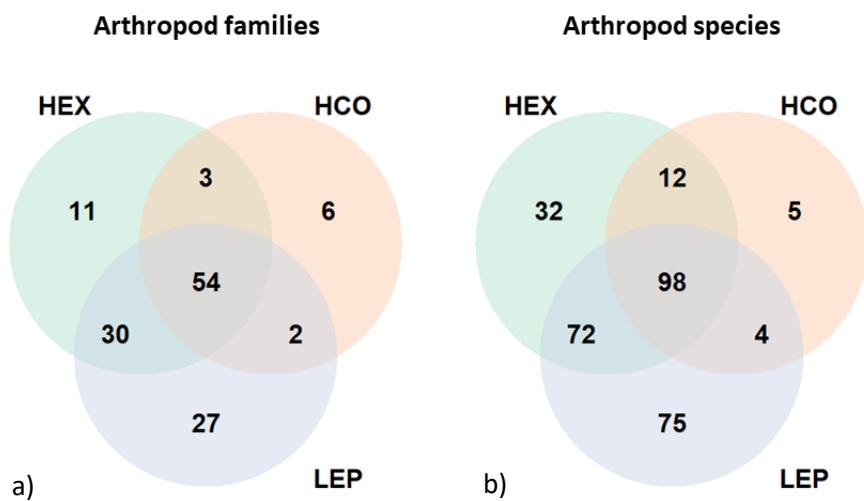

Figure S3: Venn diagram of taxonomic coverage obtained with the three COI markers used in this study, represented through a) arthropod family diversity and b) arthropod species diversity.

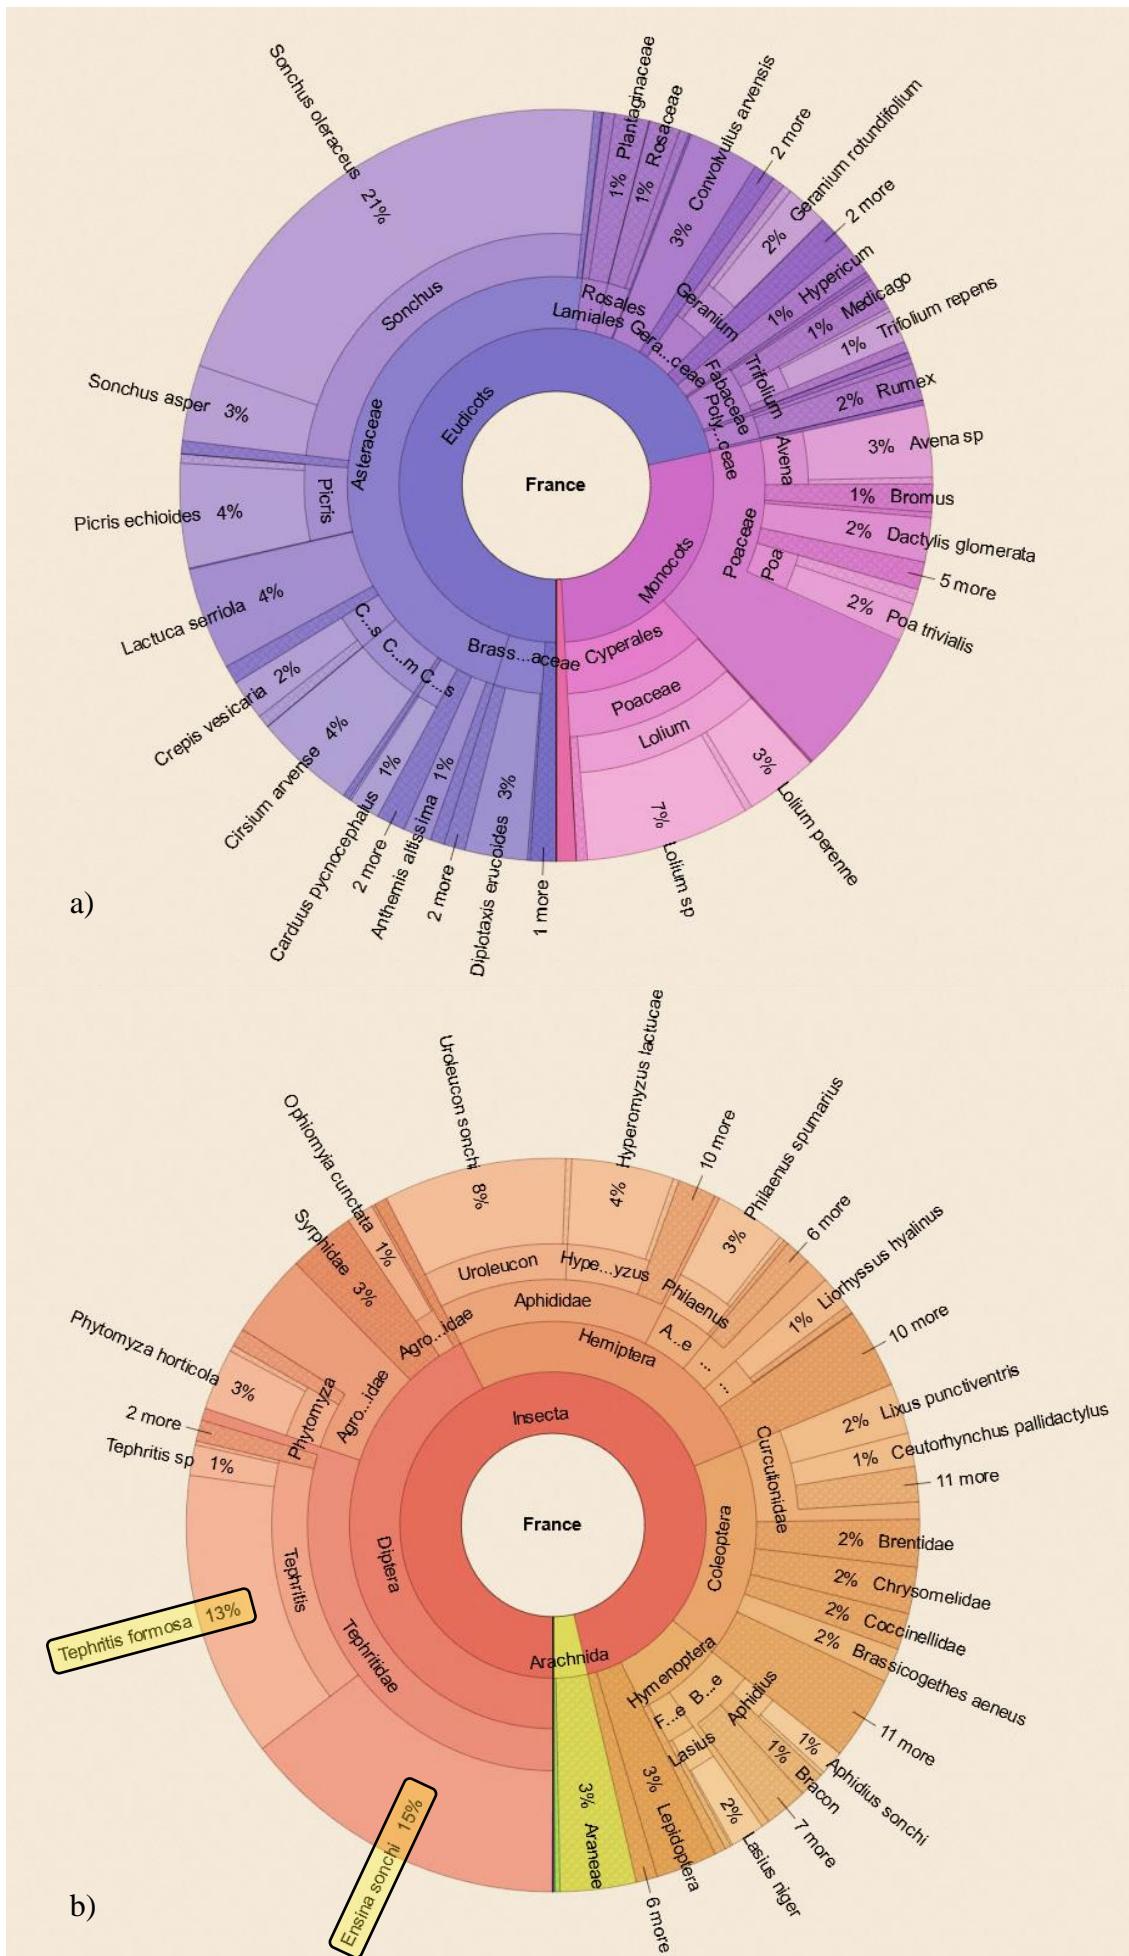

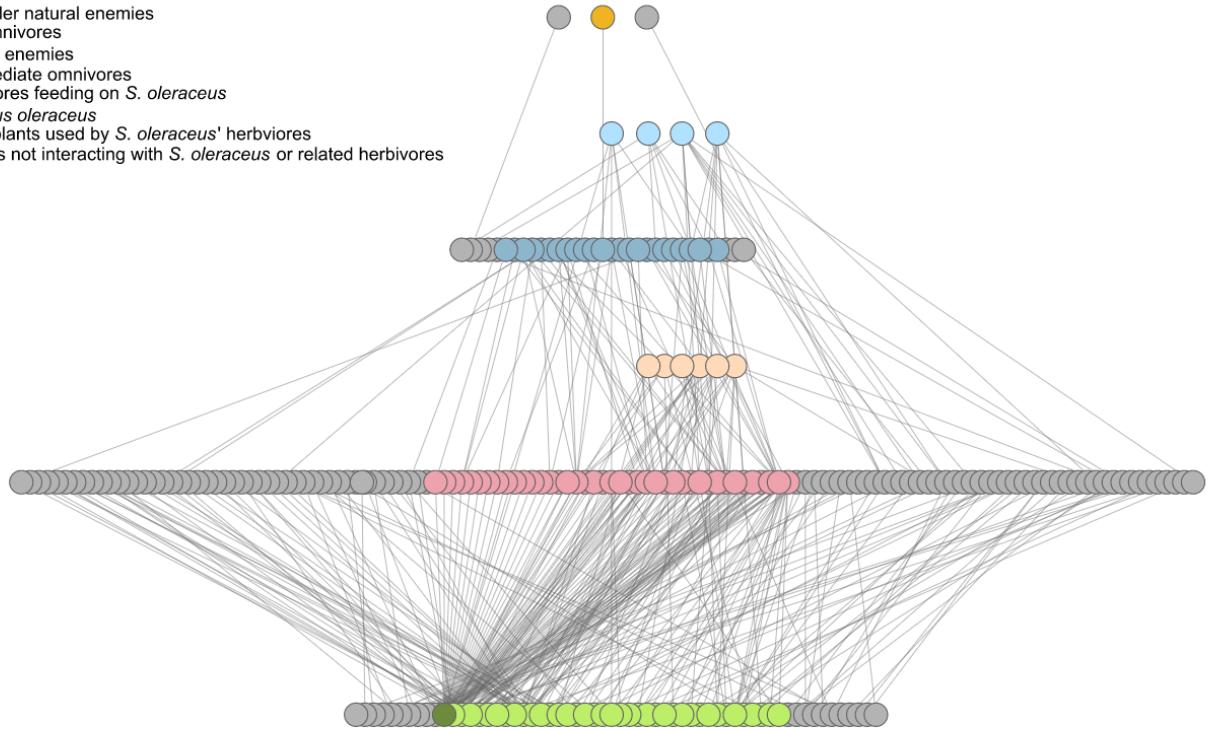

Figure S4: Taxonomic abundance of a) plants and b) arthropods in the dataset after data validation. This diagram allows visualizing the hierarchical organisation of taxonomic affiliation for each species, considering species abundance. E.g. Tephritis Formosa and Ensina sonchi (Tephritidae: Diptera) were two arthropod species very frequently sampled during this campaign (Spring 2018) representing 13% and 15% of samples collected, respectively.

- 2nd order natural enemies
- Top omnivores
- Natural enemies
- Intermediate omnivores
- Herbivores feeding on *S. oleraceus*
- *Sonchus oleraceus*
- Other plants used by *S. oleraceus*' herbivores
- Species not interacting with *S. oleraceus* or related herbivores

*Figure S5: Meta-network reconstructed through intense sampling in France during spring 2018. Colored nodes refer to subnetwork centred on *S. oleraceus* related interactions. The meta-network is composed of 241 nodes and 350 links, the subnetwork is composed of 116 nodes and 213 links.*
