EnzBert: Deep attention network for enzyme class predictions

1. Task

1.1 Functional annotation of protein sequences

2. Methods

Κ

К

Κ

М

2.1 Attention mechanism and Transformer

Attention is the basis of Transformers, for each position it gives weights to other residues.

A lot of sequences data $(\approx 3 \times 10^8 \text{ sequences})$

 \rightarrow little experimentally

annotated proteins

 $(\approx 5 \times 10^5 \text{ proteins})$

Important experimental cost

Can account for long distance relations between the elements of the sequence

1.2 Challenges

Sequence information (2.1) Underlying 3D structure (2.1) Few examples per category (2.2)

Q Interpretability (2.3)

2.2 Two phases training

Κ

Unsupervised pre-training on all proteins and supervised fine-tuning step on enzyme classification

Produces a meaningful embedding space for proteins and exploits this during the fine-tuning for better generalization

2.3 Interpretability method

Attention maps from multiple layers and multiple heads. A new interpretability method to get residues' importance scores : attention aggregation.

3. Results

3.2 Interpretability 3.1 Enzyme classification

Comparison with state-of-the art method at level 1 and 2 of the enzyme commission (EC) number on EC40 dataset

UDSMProt ¹ 0.87 0.84 EnzBert 0.97 0.95	Model	Accuracy at level 1	Accuracy at level 2
EnzBert 0.97 0.95	UDSMProt ¹	0.87	0.84
	EnzBert	0.97	0.95

Macro metrics, comparison with state-of-the-art method at different levels of the enzyme commission (EC) number on ECPred40 dataset.

Model	Level	Macro-precision	Macro-recall	Macro-f1
ECPred ²	0	0.78	0.78	0.77
$\mathbf{EnzBert}$	0	0.80	0.80	0.80
ECPred	1	0.69	0.84	0.73
EnzBert	1	0.62	0.55	0.55
ECPred	2	0.48	0.61	0.51
$\mathbf{EnzBert}$	2	0.57	0.60	0.55
ECPred	3	0.50	0.56	0.50
$\mathbf{EnzBert}$	3	0.53	0.57	0.52
ECPred	4	0.43	0.41	0.40
EnzBert	4	0.49	0.49	0.47

Benchmark: Evaluated on the identification of catalytic residues on enzymes with respect to different interpretability methods.

Method type	PRG-AUC $(x100)$	max F-Gain (%)	Time (s)
Random	42.54 ± 4.37	69.85 ± 1.04	—
Grad	75.01	81.27	4.64
Grad X input	63.62	78.66	7.74
Integrated grad	76.41	81.70	2.48×10^2
Attn last layer	87.80	85.62	2.87
Attn aggregation	98.01	96.05	3.72
Rollout	66.08	76.77	2.95
TGLRP	90.92	88.56	4.05×10^1
TGradCam	81.00	76.77	4.35×10^1
LIME	93.46	91.44	$1.73 imes 10^4$

Attention-based interpretability performs best

NH(3)-dependent NAD(+) synthetase enzyme

4. Conclusion

- State-of-the-art prediction on enzymes' classes from sequences only for our model EnzBert
- New interpretability method for Transformers that works very well on enzymes
- Prospects: Considering the hierarchy of Enzyme Commission (EC) number may improve our results
