HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Erratum

**Linelists for NH₃, NH₂D, ND₂H, and ND₃
with quadrupole coupling hyperfine components**

Key words. molecular data – catalogs – radio lines: ISM – errata, addenda

In order to derive the emission probabilities (*A* factors) of the hyperfine components from the line intensities given in Tables 8–11, the values of the partition functions displayed

in Table 2 should be multiplied by 3, the degeneracy introduced by the nuclear spin of nitrogen.

Acknowledgements. We thank John H. Black for pointing out this inconsistency.
