**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Experimental set up's aim: is baseline's splay angle rate of change involved in altitude control in *Apis mellifera* ?

two optical invariants:

- optical scrolling speed  $\dot{S} = 0$
- base lines' splay angle rate of change  $\dot{\omega} = 0$

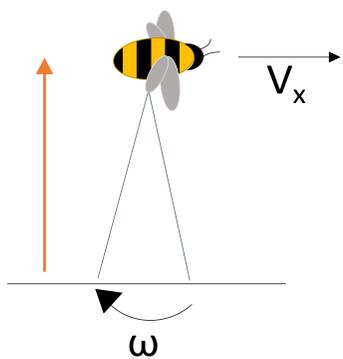

--> optical invariants can be uncorrelated

--> optical invariants can be individually suppressed

--> optical invariants can be distorted

Optical scrolling speed (OSS) experienced by a flying agent

altitude (z)

$$\omega = \frac{V_x}{z}$$

$$\dot{\omega} = 0$$

[1, 2, 3, 4, 7]

Splay angle's rate of change experienced by a flying agent

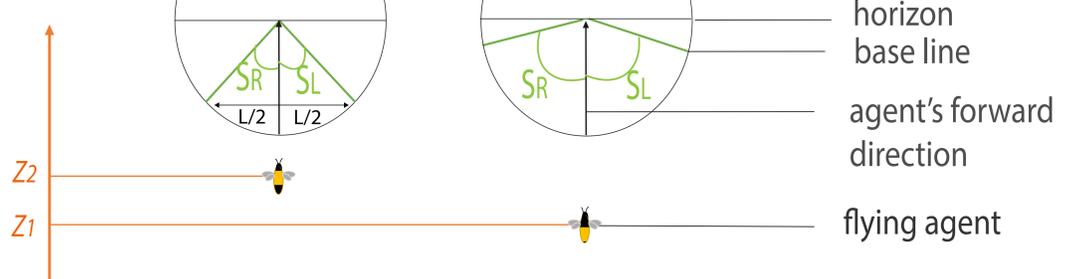

$S = 1/2$  angle formed by base lines  
 $S_R = \text{right splay}$ ;  $S_L = \text{left splay}$

$S_R = S_L = S$  for a centered bee  
 $L = \text{path width}$

$$S = \arctan\left(\frac{L/2}{z}\right)$$

$$\dot{S} = 0$$

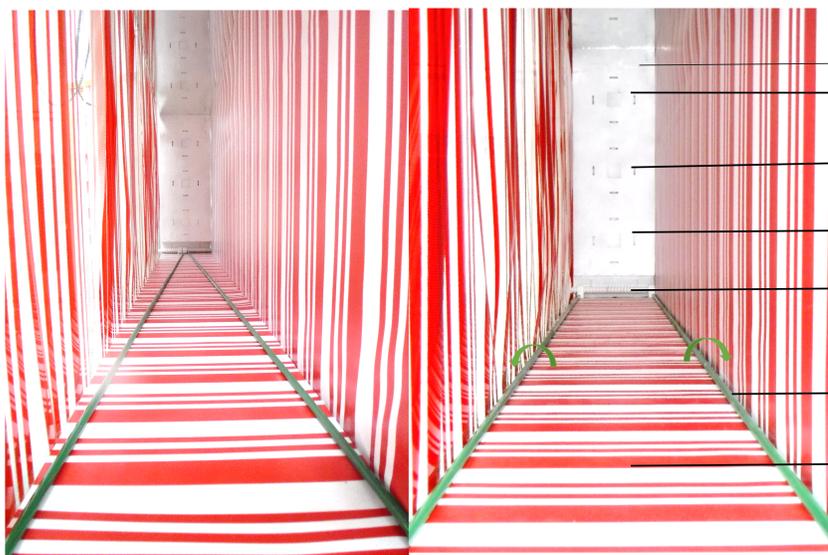

altitude

based on [6] in humans

[5, 6]

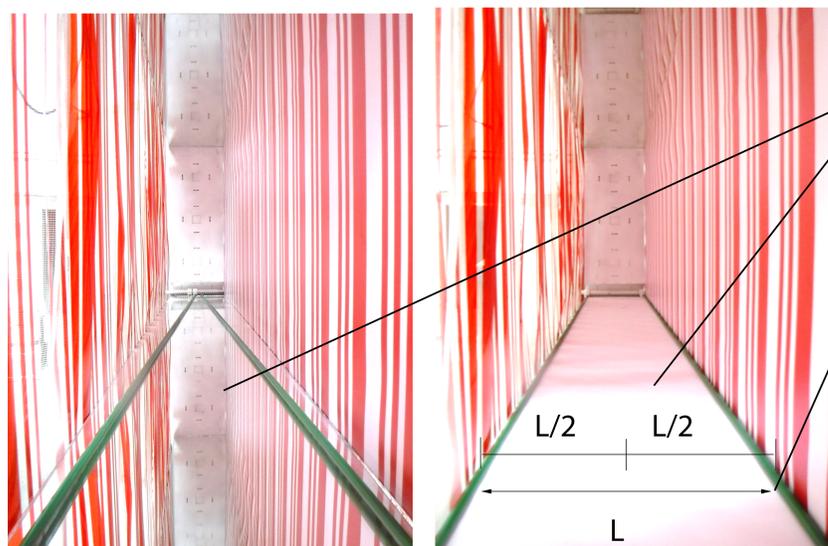

Experimental set up

- minimized visual clues
- 3 possible entrances/exits provided with food reward
- two-way metric screw operated by a brushless motor
- mobile stick
- OSS available

OSS available  
Narrowed splay angle

OSS available  
Real splay angle

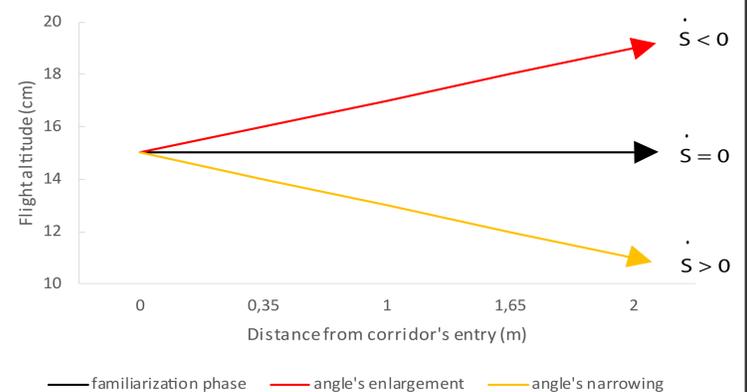

no OSS available

corridor width

No OSS available  
Narrowed splay angle

No OSS available  
Real splay angle

Predictive bee's altitude in response to an apparent splay angle rate of change

$$\dot{S} = -\frac{\frac{L}{2}}{z^2 + \left(\frac{L}{2}\right)^2} \cdot \dot{z}$$

Perceived	Meaning	Response
$\dot{S}$	$\dot{z}$	$\dot{z}$
$\dot{S}$	$\dot{z}$	$\dot{z}$

Question : ? < S < ? (° · S<sup>-1</sup>)
