

Automated Transcription of Electronic Drumkits

Martin Digard

Florent Jacquemard

Lydia Rodriguez-de la Nava

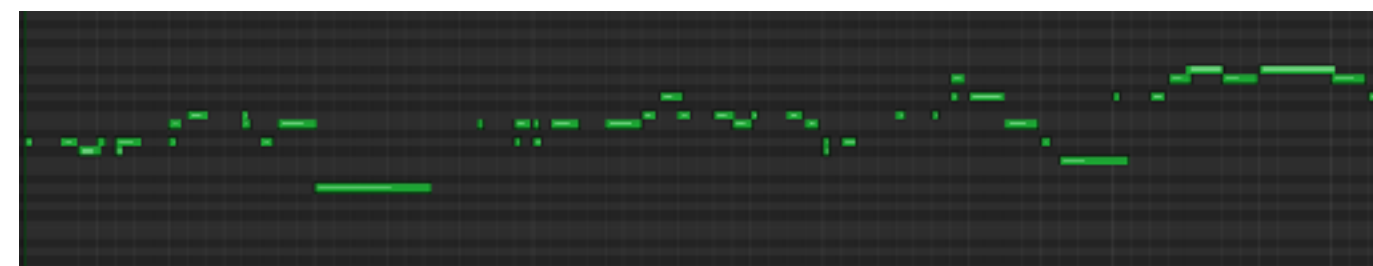

source
MIDI drumkit

symbolic representation
of performance
piano roll (MIDI file)

- only NOTE-ON Events
- pitches = Drum Elements
- unquantized onsets & durations

target representation
music score (XML file)

symbolic MIR

- rhythm quantization
- voice separation
- score engraving

Outline

1. Elements of Drum notation

2. Parsing Drums MIDI Recording

- Prior Weighted Tree Grammar
- Vertical Alignments

3. Score Engraving

- Building an Intermediate Score Representation
- Term Rewriting

4. Experiments and Results

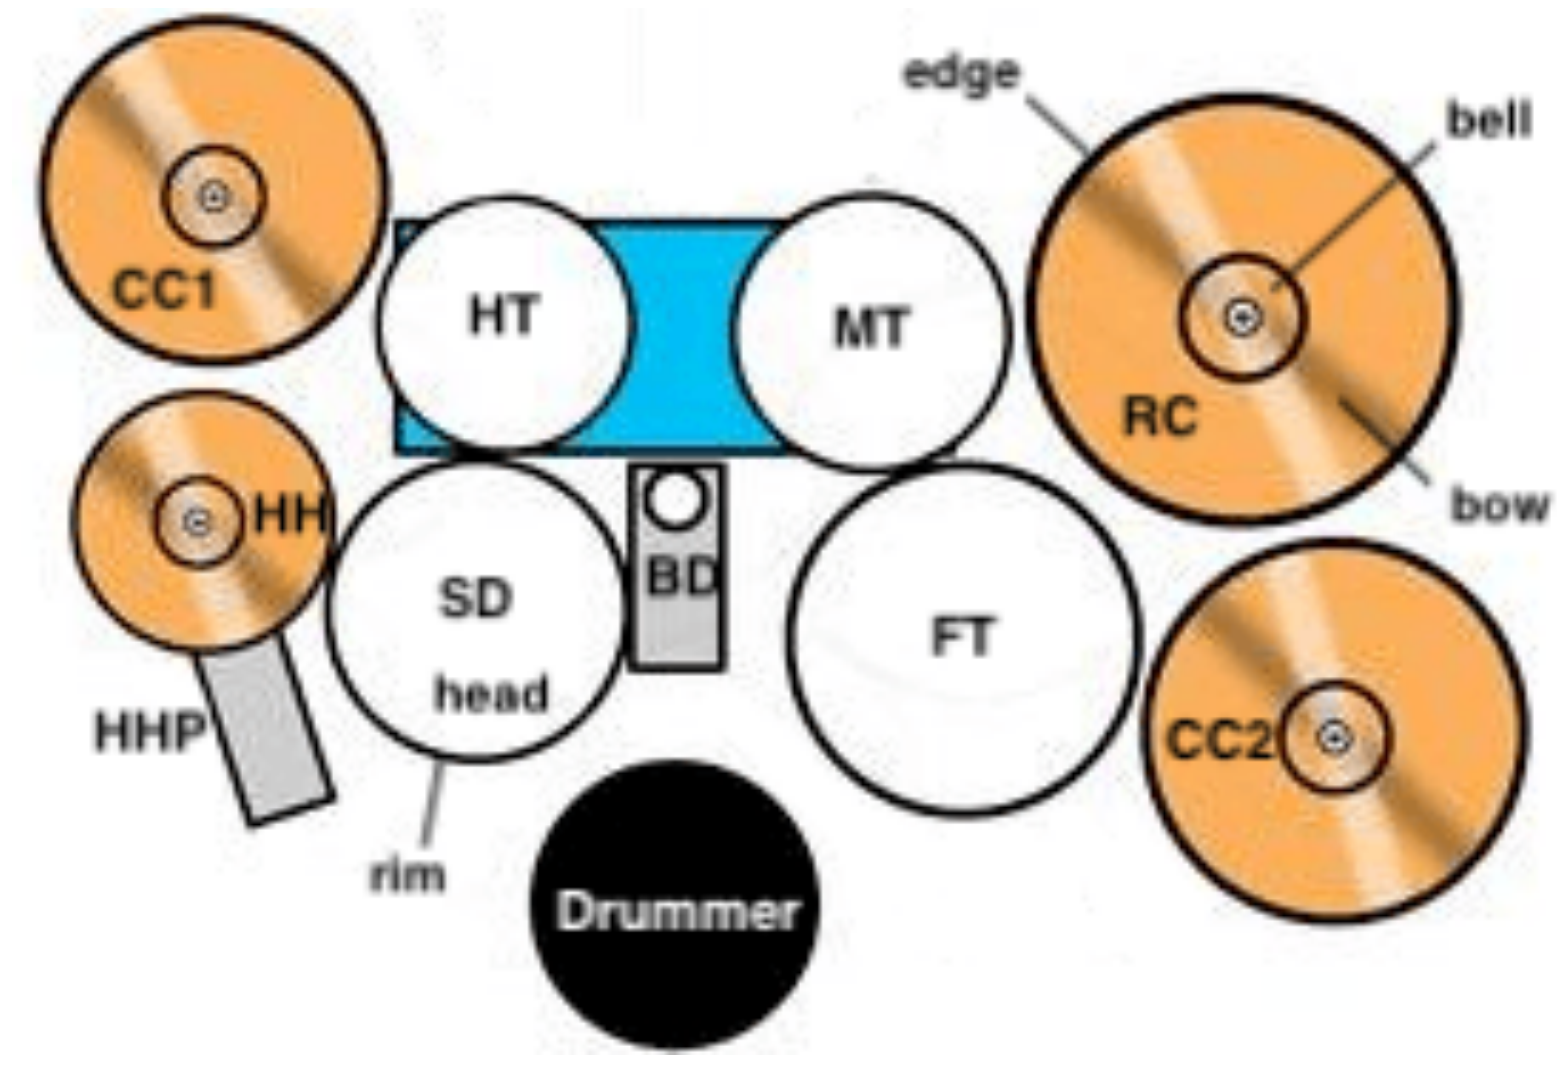

with Google Groove MIDI dataset

- for **teaching**
Drum notation emerged with drum schools
- for the **preservation** of improvisations
- no standard
2 schools (few differences):
 - Europe (Agostini)
 - US (“Universal”)
- **readability** is a crucial issue
the number of elements in drumkits can overload the notation

Drumkit Elements

Principles:

- 1 **pitch** = 1 drum kit element
height = position in space
- **note head** = mode

European notation

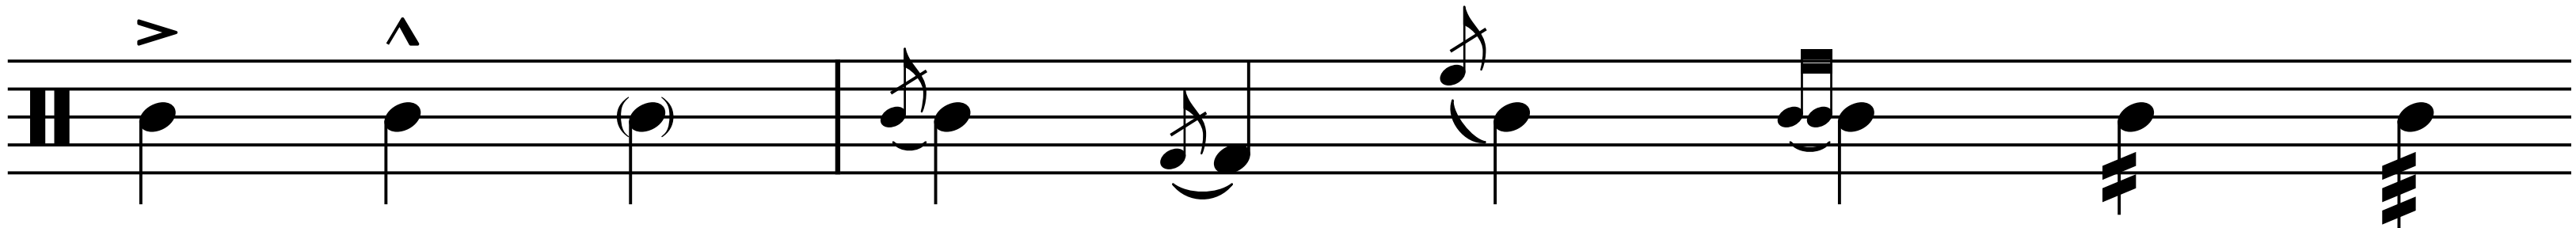

Agostini

HHP HHP BD BD2 FT FT2 SD SD SD MT HT HT2 HH HH RC RC RC CC CH SC
close open rim X closed open bow bell edge (crash)

US notation

Universal (US)

HHP HHP BD BD2 FT FT2 SD SD SD MT HT HT2 HH HH RC RC RC CC CH SC
open rim X closed open bow bell edge (crash)

accent marcato ghost note SD flam FT flam flam between HT and SD drag (not used) 16th-note roll 32nd-note roll

corresponding to velocity

2 strikes

denoted explicitly (in extenso)

- 1 staff
- but several voices
(for readability)
- voices denoted with stem direction

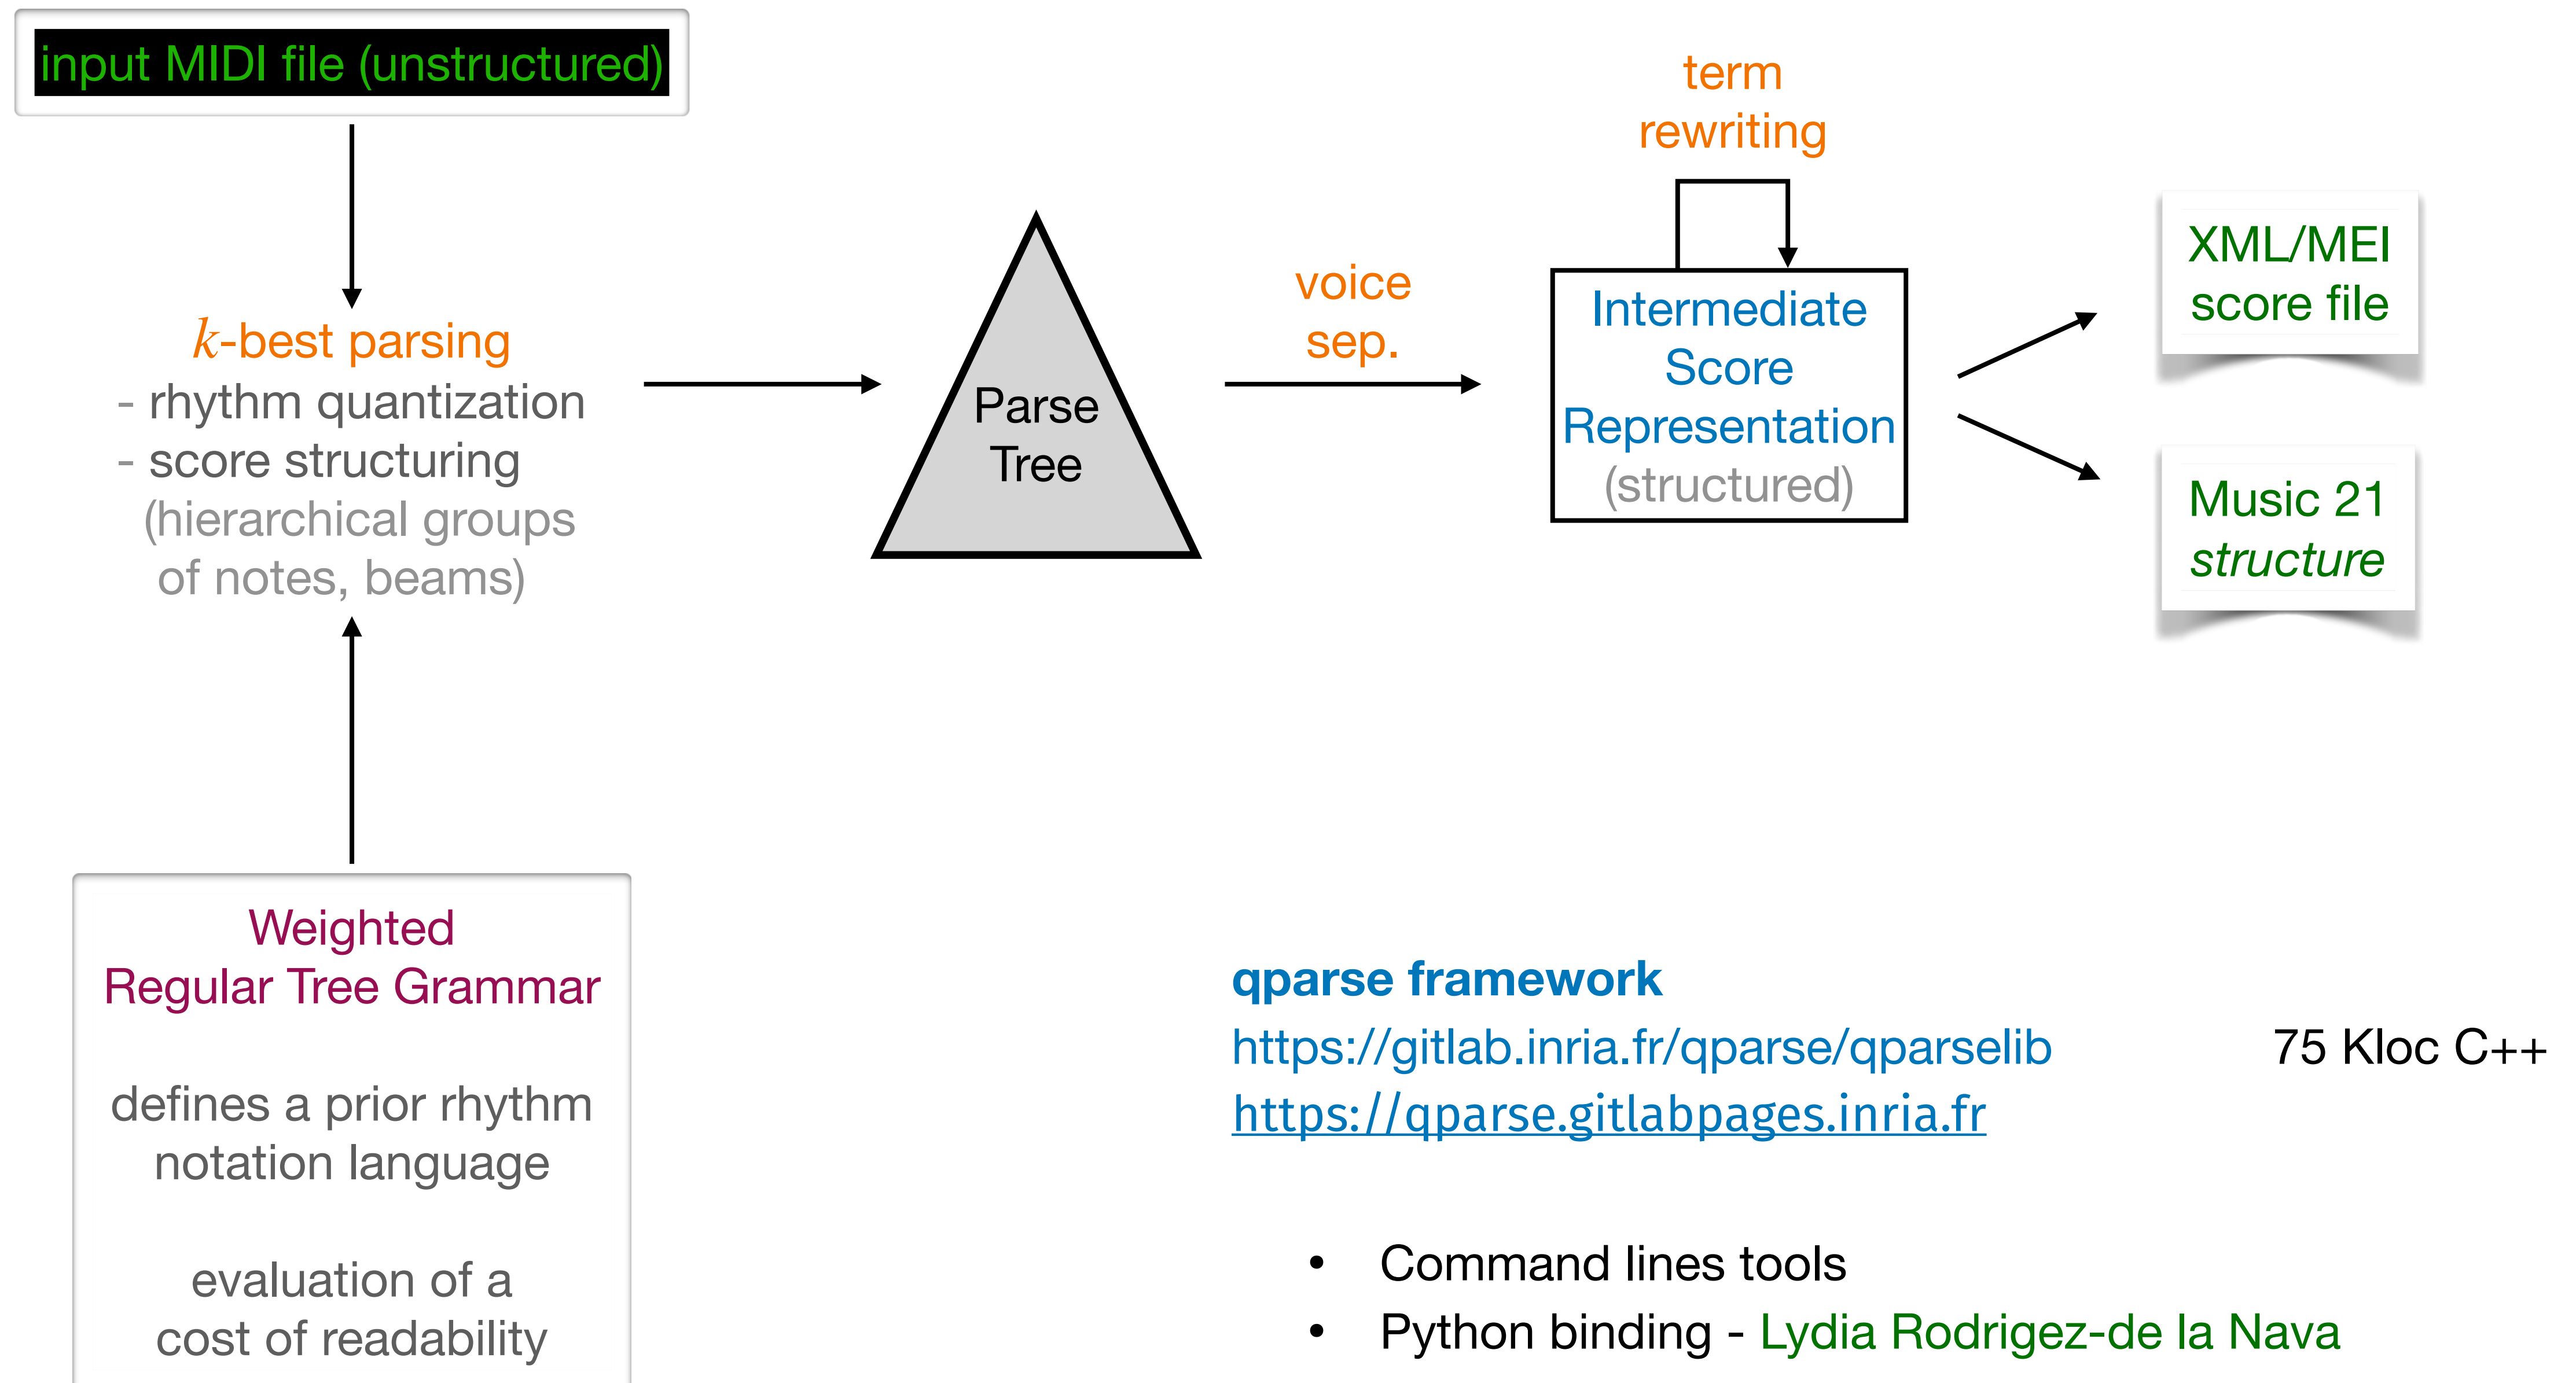

voice separation is performed according to a schema fixed for the whole score

- top voice:
hand-played notes
- bottom voice:
feet-played notes

- top voice:
repeated rhythmic patterns (RC)
- bottom voice:
other (sporadic) elements

Rhythm Quantization “on Grid”

- Rhythm quantization with grids, e.g. MIDI files import
- in score editors ([Finale](#), [Sibelius](#), [Dorico](#), [Musescore](#)...),
- or in DAWs ([Ableton Live](#), [Logic](#)...)

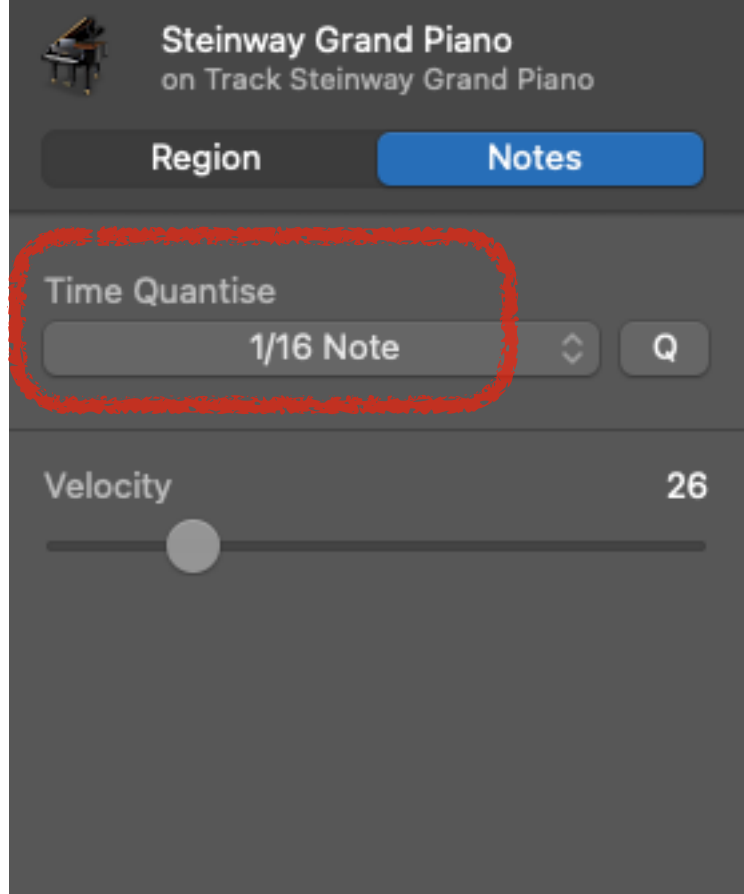

This screenshot shows the GarageBand piano roll interface for a Steinway Grand Piano track. The piano roll is set to 'Notes' view. The 'Time Quantise' dropdown menu is highlighted with a red dashed box and is set to '1/16 Note'. The velocity slider is set to 78. The piano roll shows a sequence of notes on a grid, with a red arrow pointing to the 'Time Quantise' dropdown.

This screenshot shows the same GarageBand piano roll interface as the top screenshot, but with the velocity slider set to 26. The 'Time Quantise' dropdown menu is still set to '1/16 Note'. The piano roll shows the same sequence of notes, but the notes are now shorter and more widely spaced, reflecting the lower velocity.

Grid based Approaches to Rhythm Quantization

Alignment of every input time point (onset) to the closest position in a *grid* = sequence of equidistant time position.

poor fit, good readability

good fit, bad readability

good fit, bad readability

Hierarchical (irregular) Grids

hierarchical grid

close to intuition

regular grids

- search of a best quantization is possible by a brute-force enumeration: 8th note grid, 16th, 32th, 64th...
- result not always optimal
- problems with tuplets (so called "irrationals" 3, 5, 7...)

hierarchical grids = trees

- more "natural" results
- brute force enumeration impossible

- prior specification of the **language** of acceptable hierarchical grids with quantitative formal language models: Weighted Tree Grammars

- Dynamic Programming **parsing** algorithm to extract 1-best tree, optimal wrt
 - weight wrt grammar (**readability**)
 - distance to input (**accuracy**)

Parse Trees & Vertical Alignments

Several events might be aligned at the same position of a hierarchical grid (= leaf of parse tree). They are considered simultaneous.

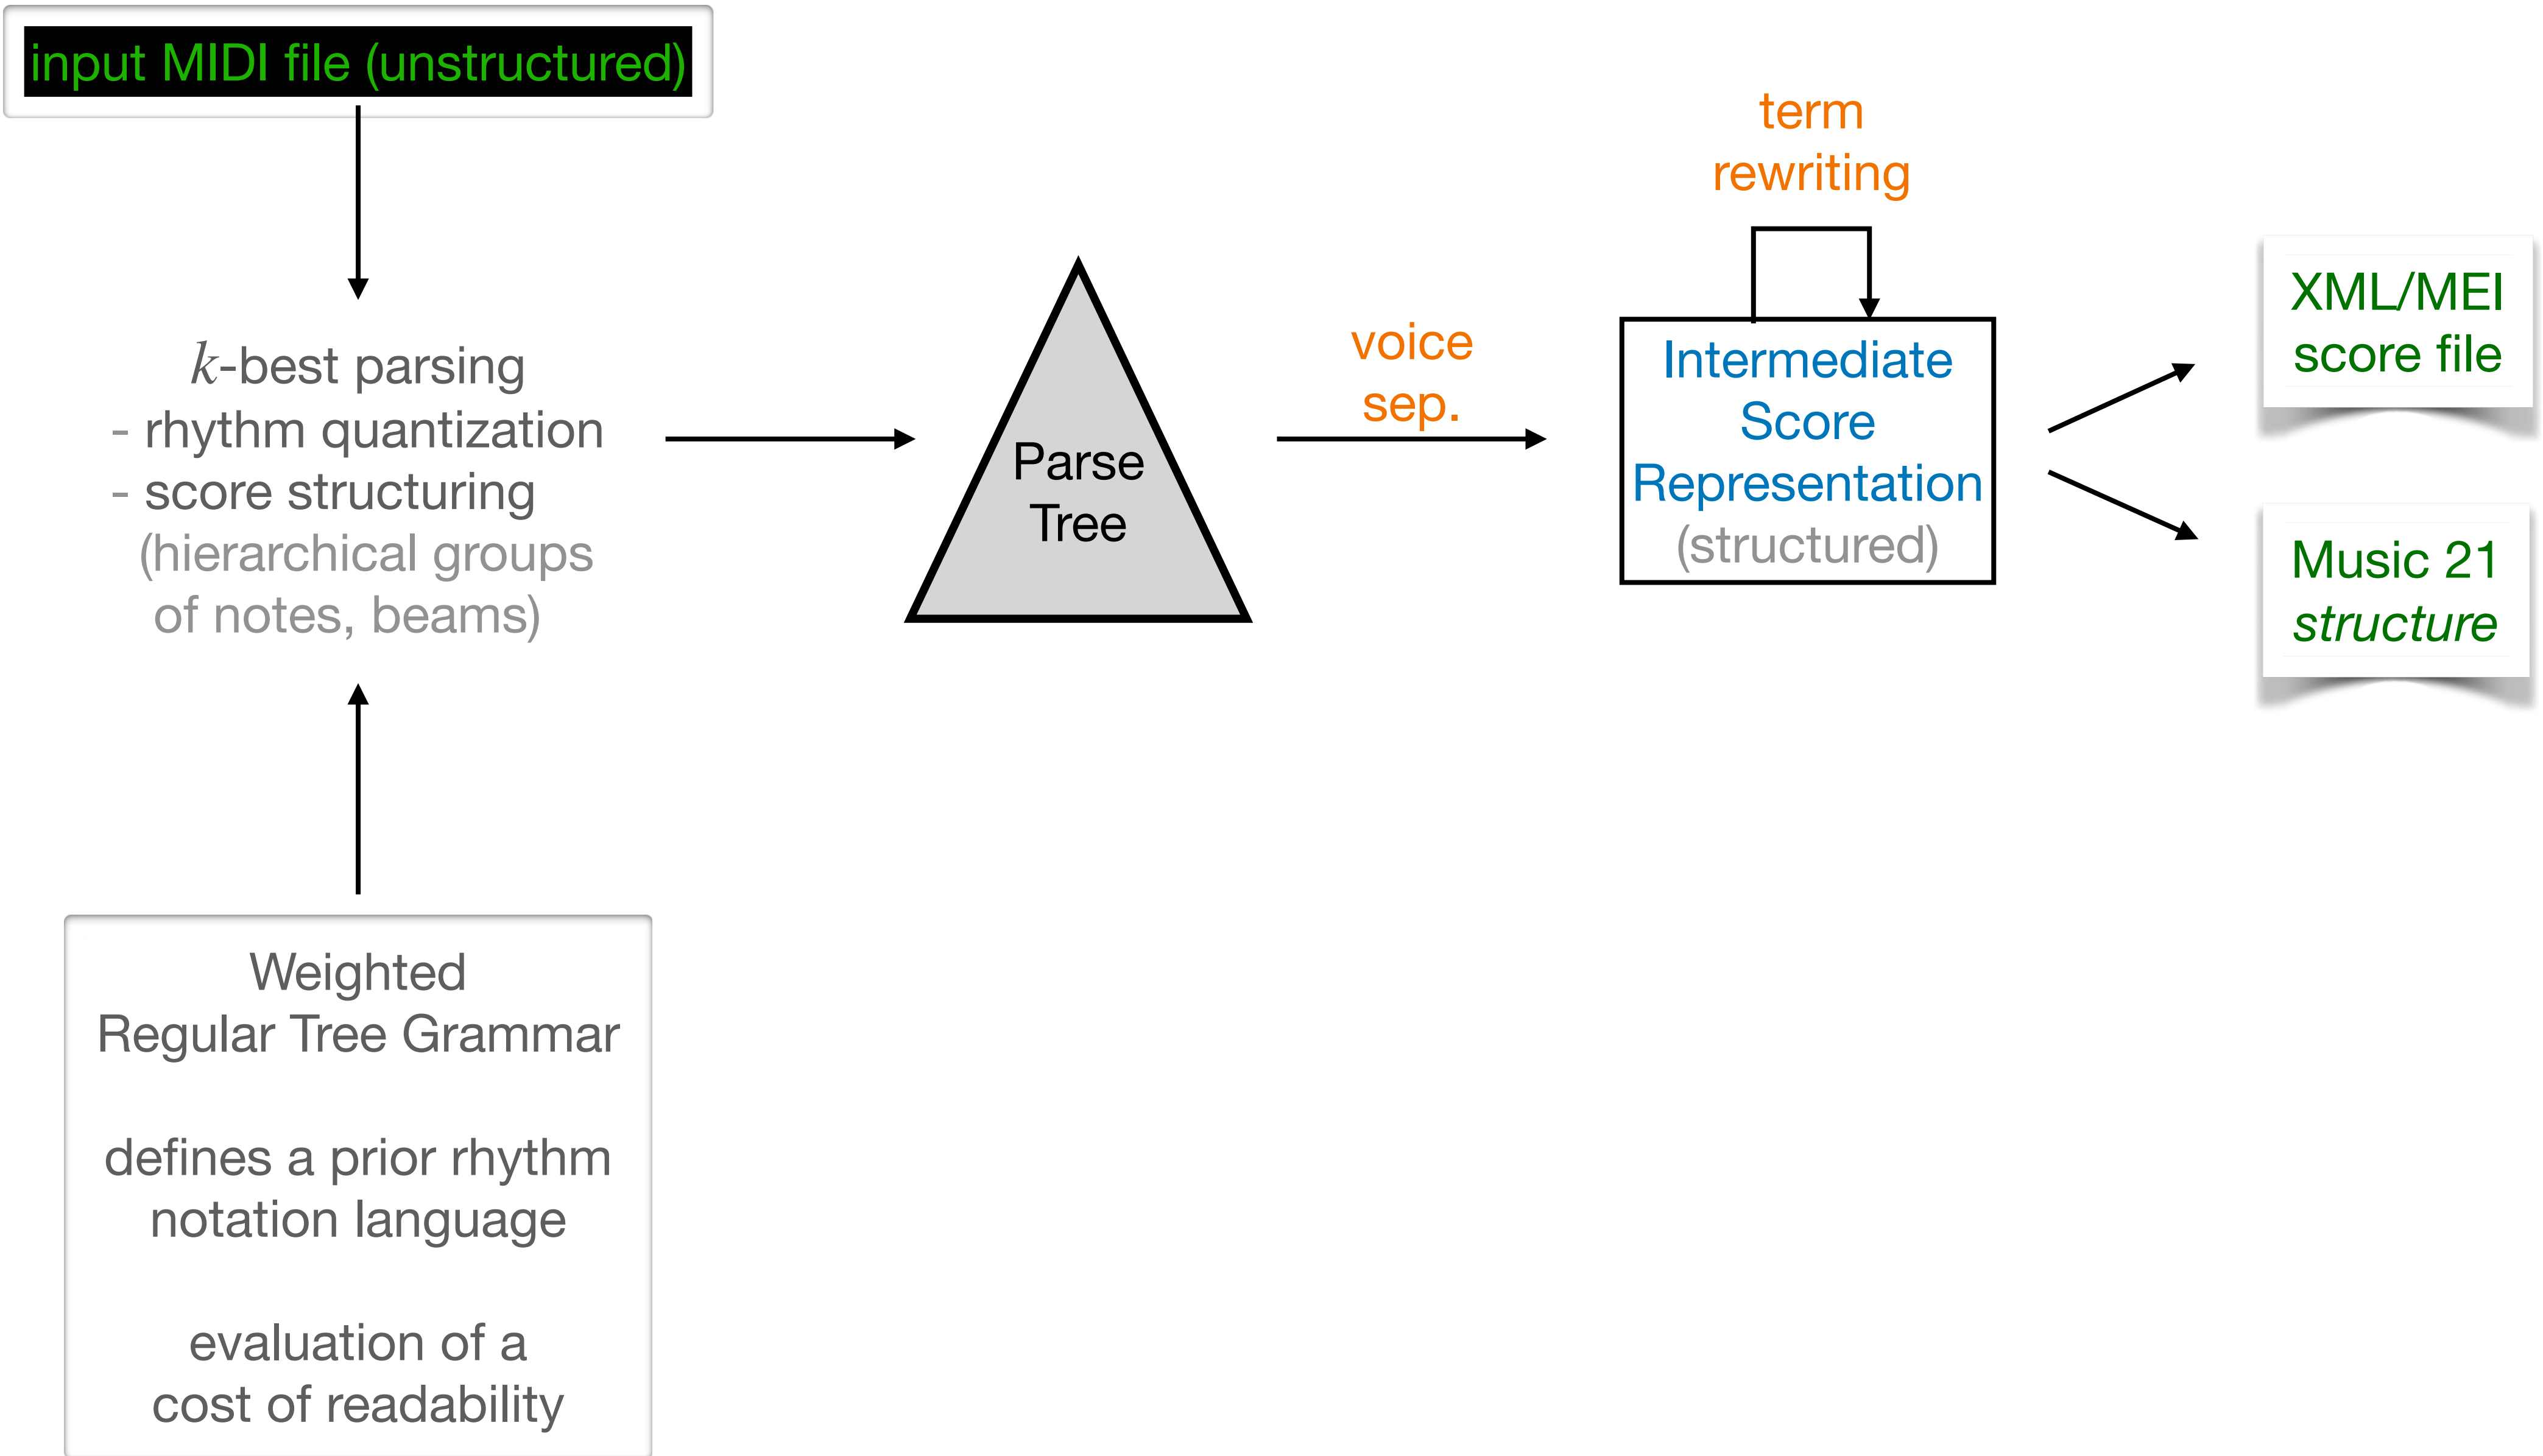

alignment rejected

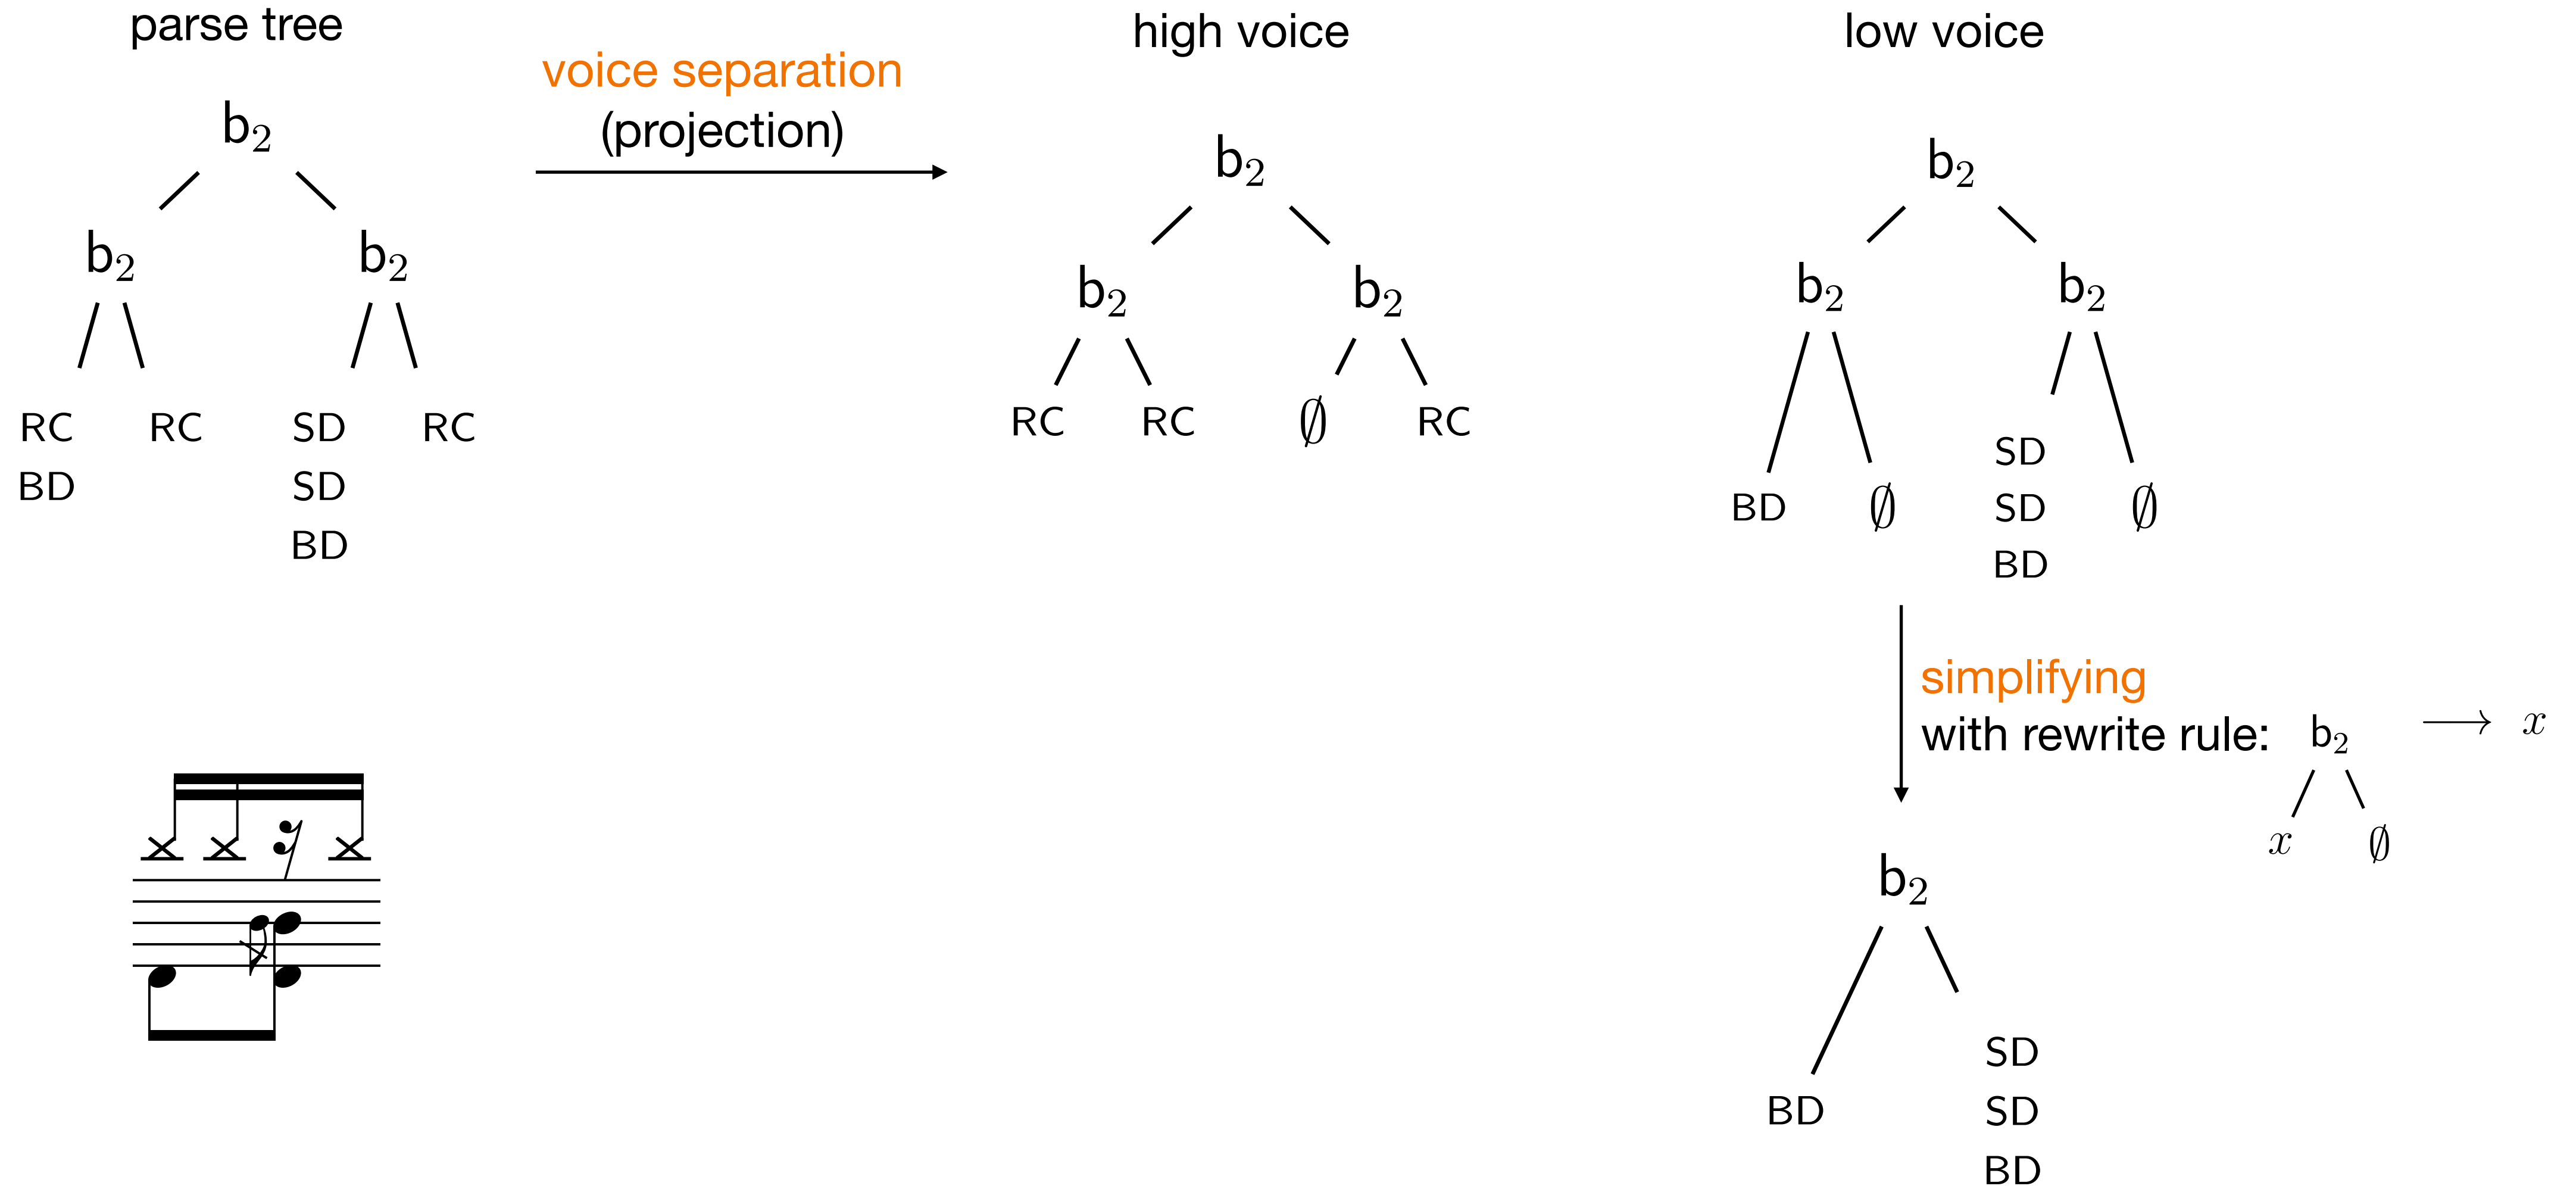

The FSM also detect (and fix) some MIDI captation errors. e.g. confusion between rim-shot and cross-stick

Transcription Workflow

Post-processing the intermediate score representation

Theoretical issues:

- rewrite strategies (e.g. IO or OI),
- conflicts (overlapping rules)...

with **Groove MIDI Dataset**

- by Google Magenta
<https://magenta.tensorflow.org/datasets/groove>
- 13.6 hours, 1150 MIDI files ~ 22000 measures recorded by professional drummers on a electronic drum kit
- audio (wav) files synthesized from (and aligned to) MIDI files for evaluation of audio-to-MIDI drum transcription
- no score files!
i.e. no ground truth for evaluation

Results

- 25 score transcriptions to XML/MEI as proof of concept
<https://gitlab.inria.fr/transcription/gmdscores>
- score length: 24 to 261 4/4 bars, tempo is known
transcription time ~ 2s per score
- all score files (XML) produced from the MIDI files with the same generic tree grammar (4/4 measure)
- FSM for specific drumming constraints (hands ≤ 2 , feet ≤ 2)
- processing of flams
- processing of errors from MIDI sensors

Experiments (comparison with MuseScore)

qparse output

A musical score in 4/4 time, consisting of 11 staves. The notation is dense, featuring many beamed notes and rests. A red oval highlights a triplet of eighth notes on the 8th staff. Another red oval highlights a triplet of eighth notes on the 23rd staff. The score is labeled 'qparse output'.

MuseScore output

A musical score in 4/4 time, consisting of 11 staves. The tempo is marked as $J = 120$. The notation is similar to the qparse output but includes some differences. A red oval highlights a triplet of eighth notes on the 1st staff. Another red oval highlights a triplet of eighth notes on the 11th staff. A third red oval highlights a triplet of eighth notes on the 16th staff. A fourth red oval highlights a triplet of eighth notes on the 18th staff. A fifth red oval highlights a triplet of eighth notes on the 21st staff. The score is labeled 'MuseScore output'.

Experiments (comparison with Steinberg's Dorico)

qparse output

A musical score in 4/4 time, spanning 29 measures. The notation is dense, featuring many beamed eighth notes and sixteenth notes. A single triplet of eighth notes in measure 8 is circled in red. The score is presented in a clean, standard notation style.

Dorico output

A musical score in 4/4 time, spanning 16 measures. The notation is similar to the qparse output but includes a tempo marking of $\text{♩} = 80$. Numerous triplets of eighth notes are circled in red, highlighting a specific notation style or issue. The score is presented in a clean, standard notation style.

issue?

Perspectives: Piano & Guitar transcription

- Transcription procedure for MIDI drumkit input, based on
 - prior quantitative language models (weighted tree grammars)
 - techniques of parsing by Dynamic Programming
 - post-processing with Term Rewriting

Future plans:

- Complete transcription of Google's **Groove MIDI Dataset** with manual corrections by a drummer
→ dataset of drum scores
- Backend of **Audio2MIDI** drum transcription
C.-W. Wu et al. *A review of automatic drum transcription*. IEEE/ACM TASLP, 26(9), 2018.
