HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Metabolomic and Biochemical analysis of Pb accumulation and tolerance in *Hirschfeldia incana*

Oumaima EL KHATTABI, Youssef LAMWATI, Fabrice COLIN, Abdelaziz SMOUNI and Mouna FAHR

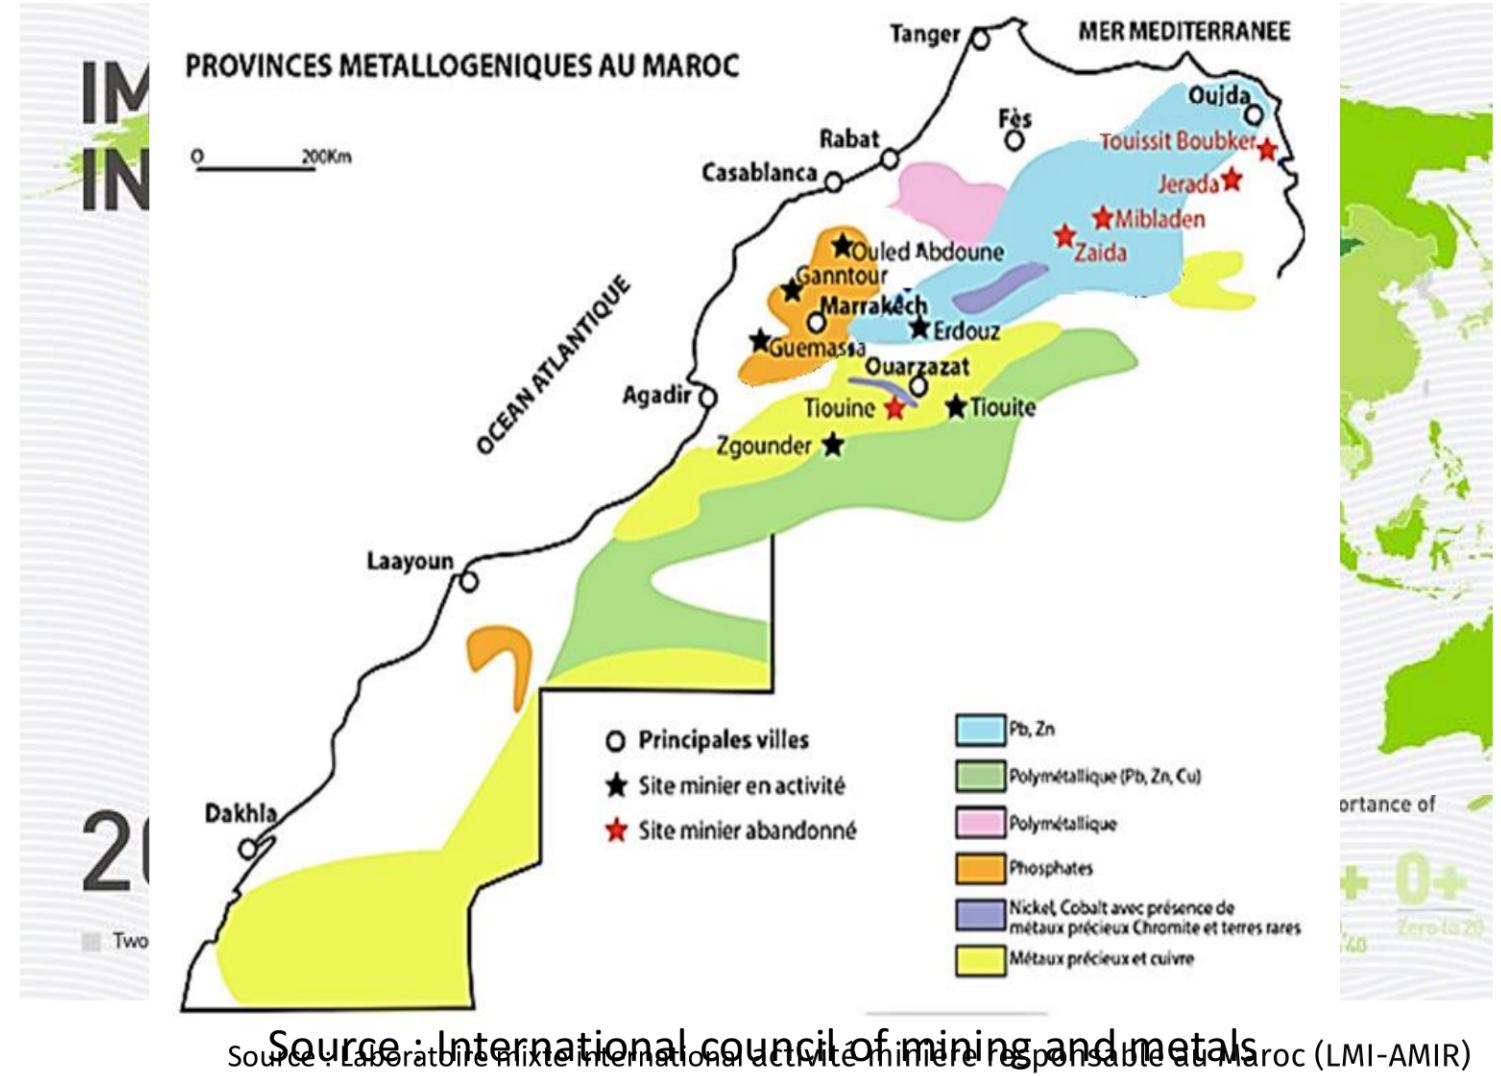

Mining Activities: Economic contribution

Morocco

Rich in mineral deposits

10% of national gross domestic product

Mining Activities: principal source of pollution

Mining Pb/Zn slag heaps at Touissit site – Eastern Morocco

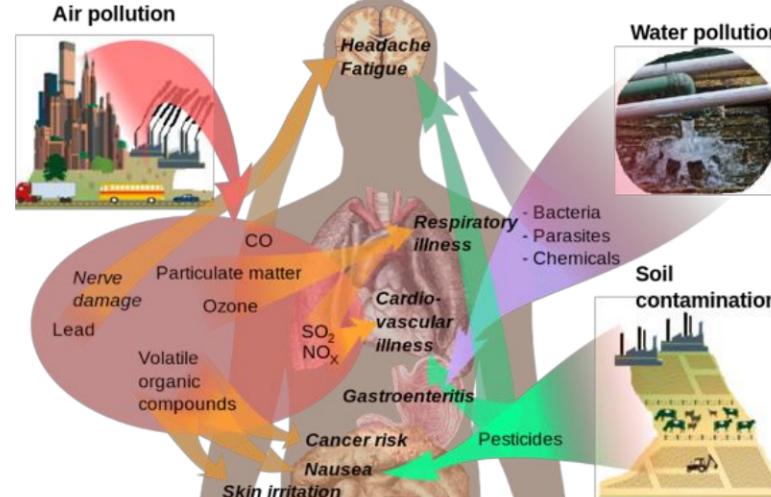

Scoria of Oued El Heimer Foundry - Eastern Morocco

AMD at Kettara mining site - northwest of Marrakech Morocco

Landscape change
Contamination of soil

Effects on Health

Contamination of
water resources

Mining Activities: Principal source of pollution

- Plant water status alteration
- Photosynthesis disruption
- Oxidative stress induction

Pb

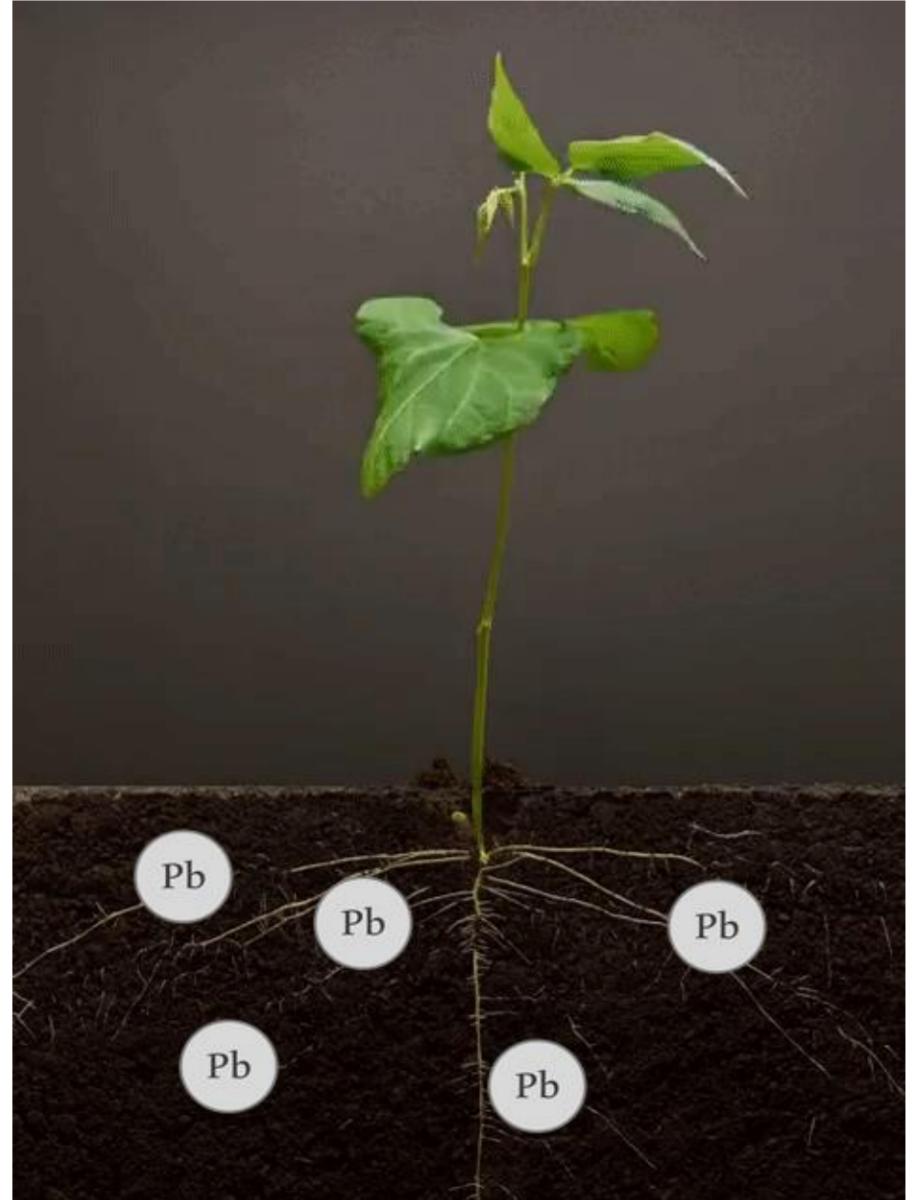

Some plant species develop effective strategies of protection against these elements

These natural properties are exploited in the field of **Phytoremediation**

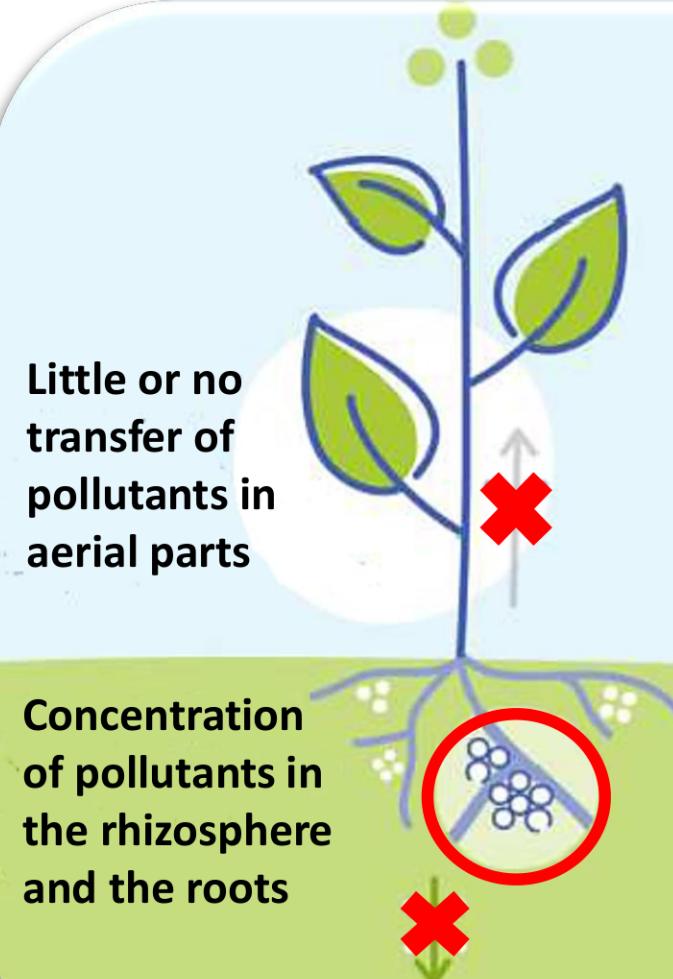

Phytoremediation

- A biological Method based on the ability of plants to extract or block pollutants from contaminated soil or water
- More efficient
- Less expensive

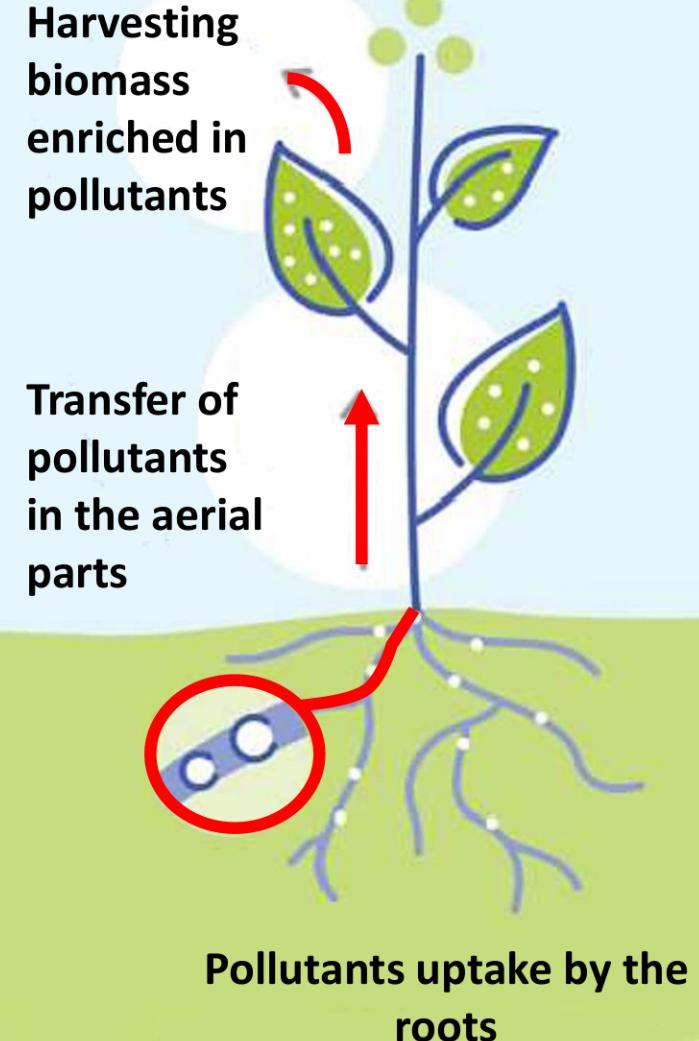

Phytoremediation strategies

PHYTOSTABILISATION

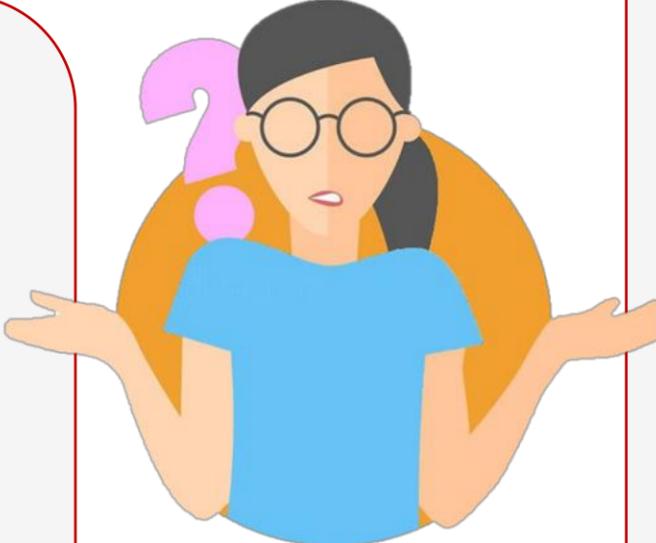

PHYTOEXTRACTION

Although phytoremediation offers several advantages :

Economic
Ecological
Aesthetic

Phytoremediation limits

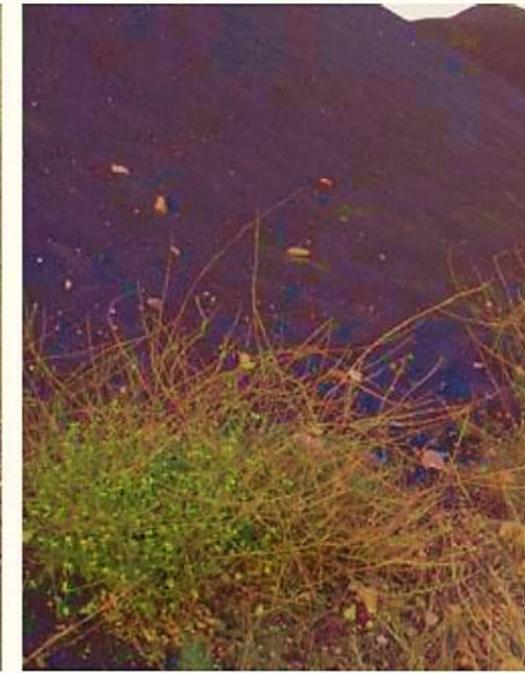

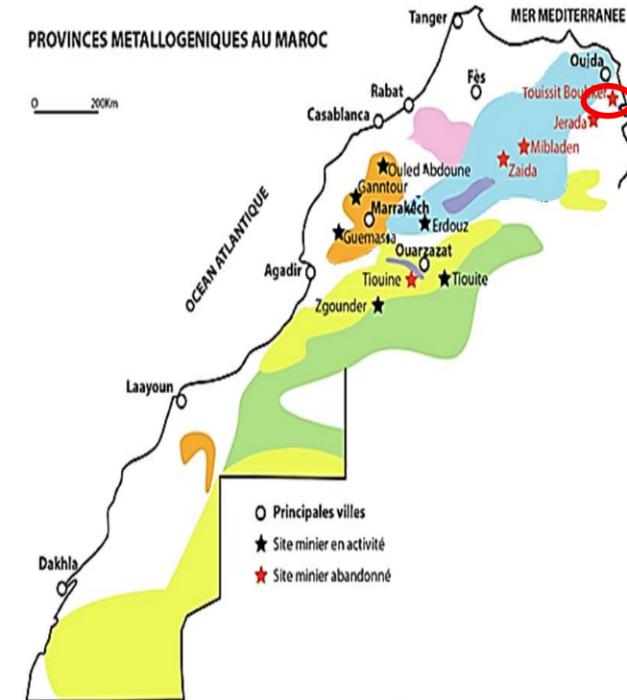

Slow decontamination process

Accumulator plants have :

- Slow growth rate
- Low biomass production

With the aim of optimizing the use of plants in the rehabilitation of soils polluted by Pb

- *Hirschfeldia incana*
- Oued el heimer-toussit sites

Hirschfeldia incana growing on lead slag from the site of Oued El Heimer near Oujda in Morocco

With the aim of optimizing the use of plants in the rehabilitation of soils polluted by Pb

Hirschfeldia incana

- Accumulates in its aerial parts up to 1400 mg of Pb/Kg of dry matter
- Short vegetative cycle (2 months)
- Rapid growth
- Easy to handle in the laboratory
- Its transcriptom has just been sequenced

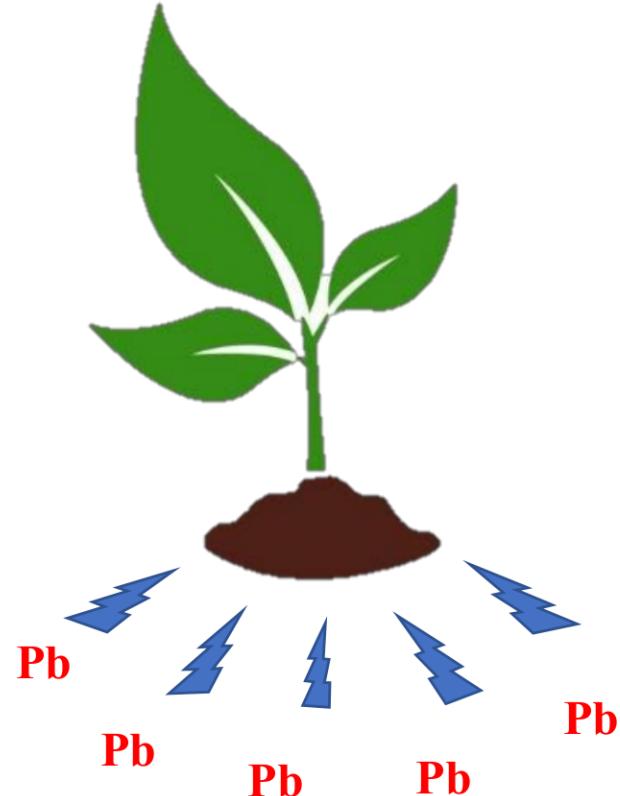

Hirschfeldia incana growing on lead slag from the site of Oued El Heimer near Oujda in Morocco

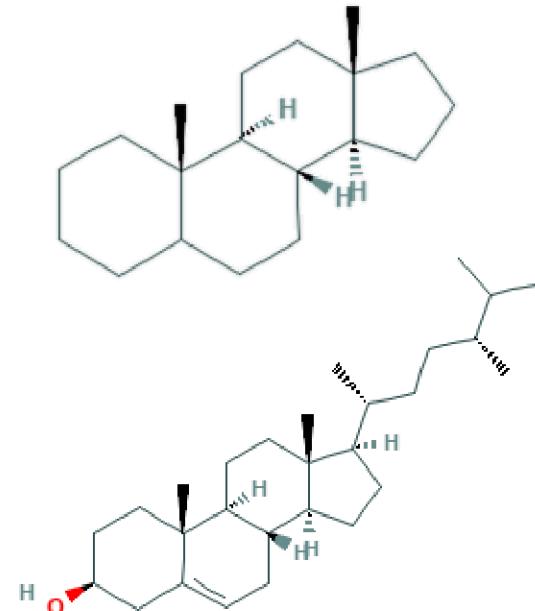

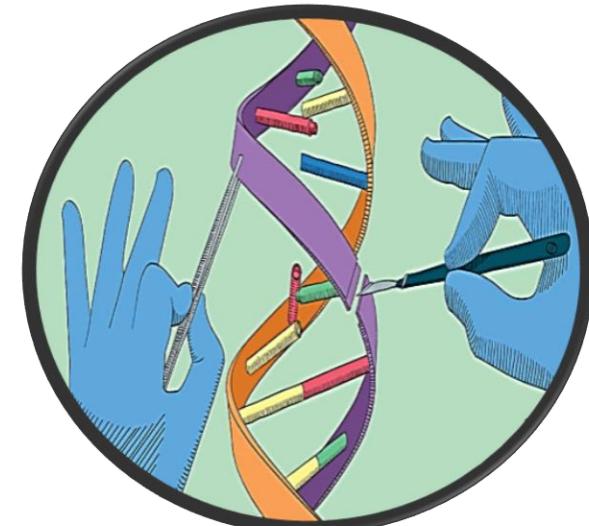

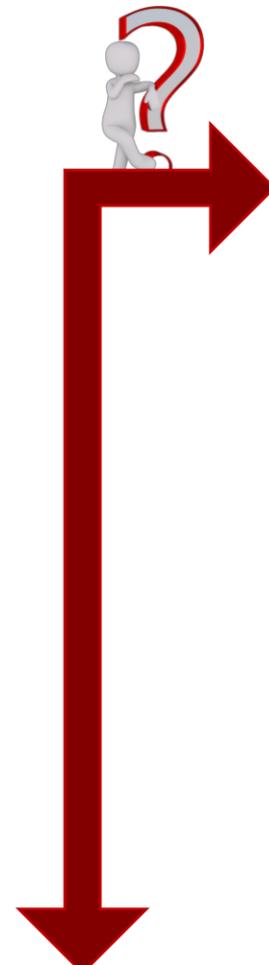

A good model to study Pb tolerance and accumulation mechanisms

Molecular changes

Physiological changes
Metabolites variation

Molecular and metabolomic
data on heavy metal
accumulating plants are
limited

Metabolomic analysis of Pb accumulation and tolerance in *Hirschfeldia incana*

Metabolites extraction

Transesterification

Analyse via GC-MS

Metabolites implicated in Pb tolerance and accumulation

Plants grinding in liquid nitrogen

Biochemical analysis of Pb accumulation and tolerance in *Hirschfeldia incana*

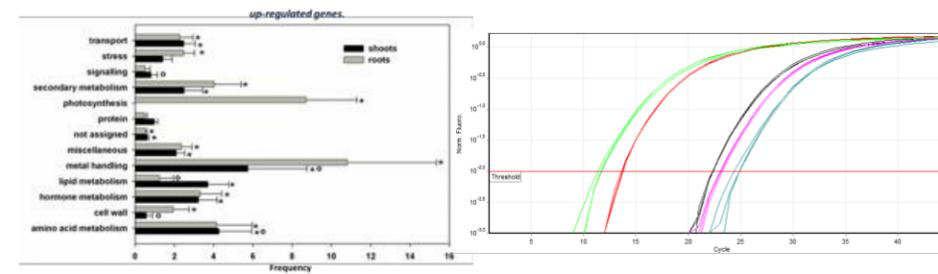

Enzymes extraction

Dosage by spectrophotometry

Molecular analysis of Pb accumulation and tolerance in *Hirschfeldia incana*

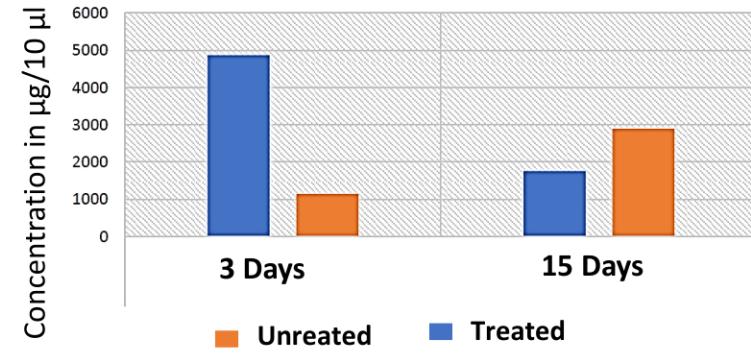

Genes implicated in metabolomic pathways

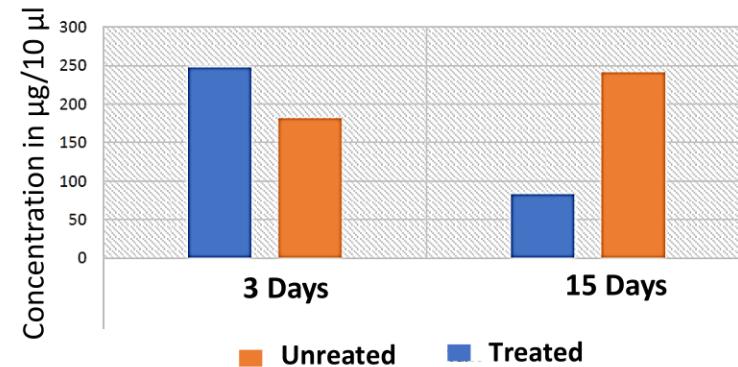

Enzymes and molecules implicated in Pb tolerance and detoxification

Metabolomic characterization

Variation in fatty acids composition

Variation in steroids composition

Plants require a period for the modulation of their metabolism to overcome Pb stress

Lipids after 15 days of Pb treatment

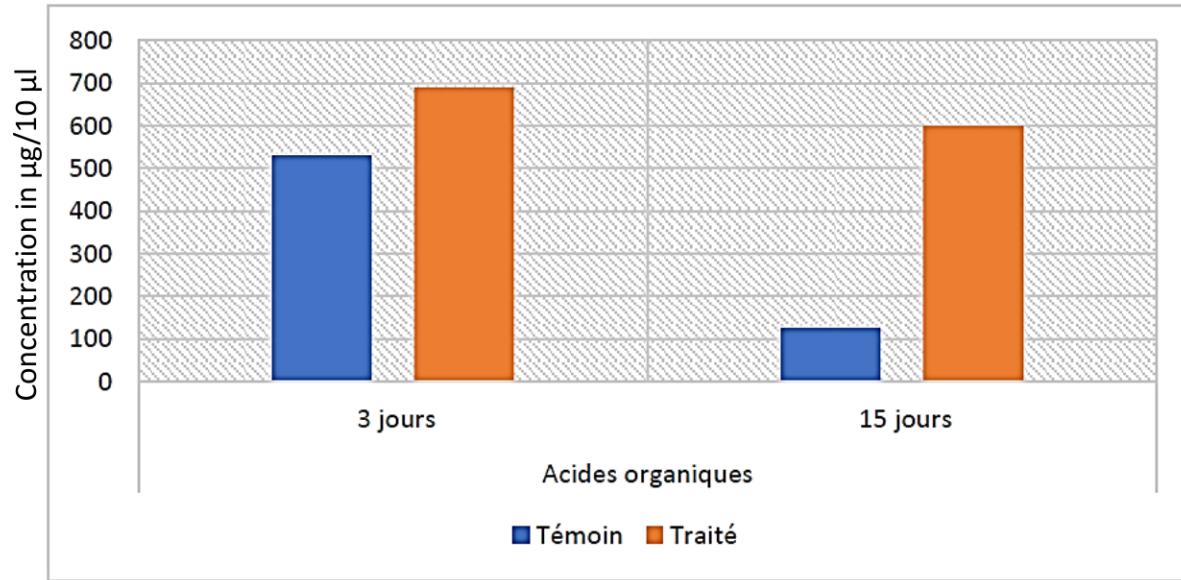

| | metabolites | TEMOIN vs TRAITE% |
|-----------------------|-----------------------------------|-------------------|
| Acides gras insaturés | 7,10,13-Hexadecatrienoic acid, | -11.87 |
| | 9,12,15-Octadecatrienoic acid, | -18.7 |
| | 6,9,12,15-Docosatetraenoic acid, | -68.76 |
| | 1-(4-Fluorophenyl)-2-[(4-hydroxy- | -5.88 |
| Acides gras saturés | Hexadecanoic acid, methyl ester | 79.52 |
| | Methyl stearate | 19.96 |
| | Ethyl 3-hydroxyicosanoate | + |
| | Tetracosanoic acid, methyl ester | 41.31 |
| | Hexacosanoic acid, methyl ester | 58.5 |
| | Methyl 18-methylnonadecanoate | + |
| | Octacosanoic acid, methyl ester | + |

Steroids after 15 days of Pb treatment

| | metabolites | TEMOINvs TRAITE% |
|--------------------------------------|-------------|------------------|
| ethyl iso-allocholate | | 153.81 |
| campesterol | | 79.83 |
| 5-cholestén-3-ol 24-methyl- | | + |
| gamma.-Sitosterol | | 151.54 |
| Androstan-17-one, 3-ethyl-3-hydroxy- | | + |

Metabolomic characterization

Variation in organic acids composition

| | metabolites | TEMOIN vs TRAITE% |
|----------------------|---|-------------------|
| Phenoles | 2,4-Di-tert-butylphenol | -4.51 |
| | Phenol, 2,2'-methylenebis[6-(1,1-dimethylethyl)-4-methyl- | + |
| Acides carboxyliques | 1,4-Benzenedicarboxylic acid, dimethyl ester | + |
| | 1,3-Benzenedicarboxylic acid, dimethyl ester | + |
| Acides carboxyliques | Succinic acid, tridec-2-yn-1-yl 3-methylpentyl ester | 20.93 |
| | Succinic acid, cyclohexylmethyl 3-chlorophenyl ester | 20.93 |
| | propanoic acid | + |

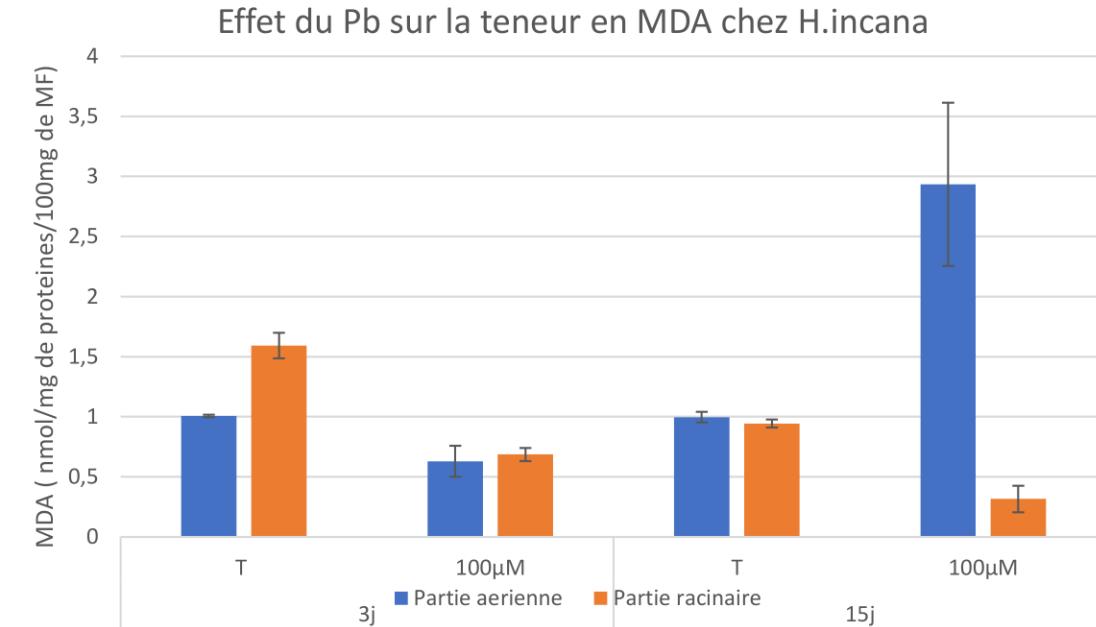

Organic acids after 15 days of Pb treatment

➤ Increase in organic acids concentration (succinic acid)

- Succinic acid is involved in the signaling of salicylic acid (mitigate Pb stress effects)

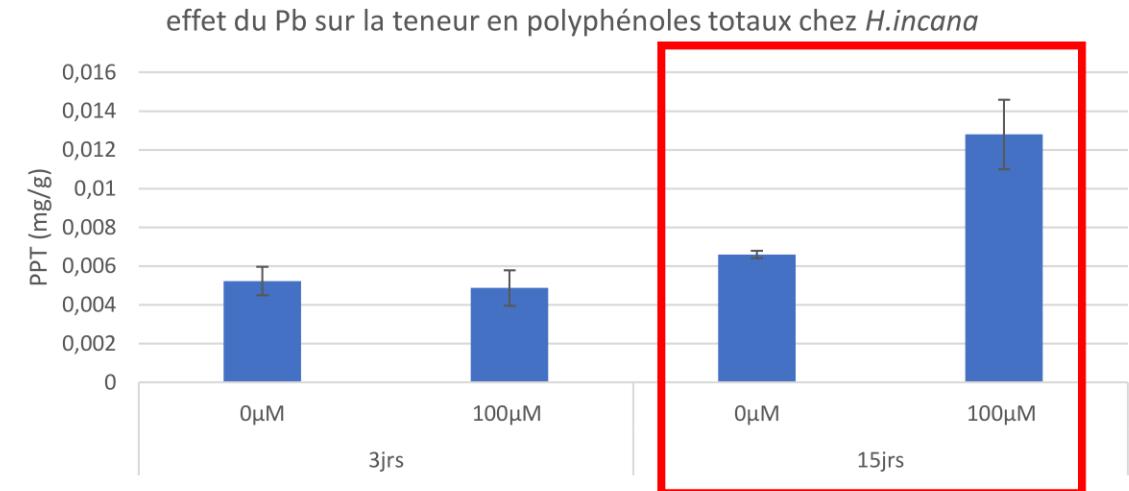

Biochemical characterization

Malondialdehyde (MDA) content

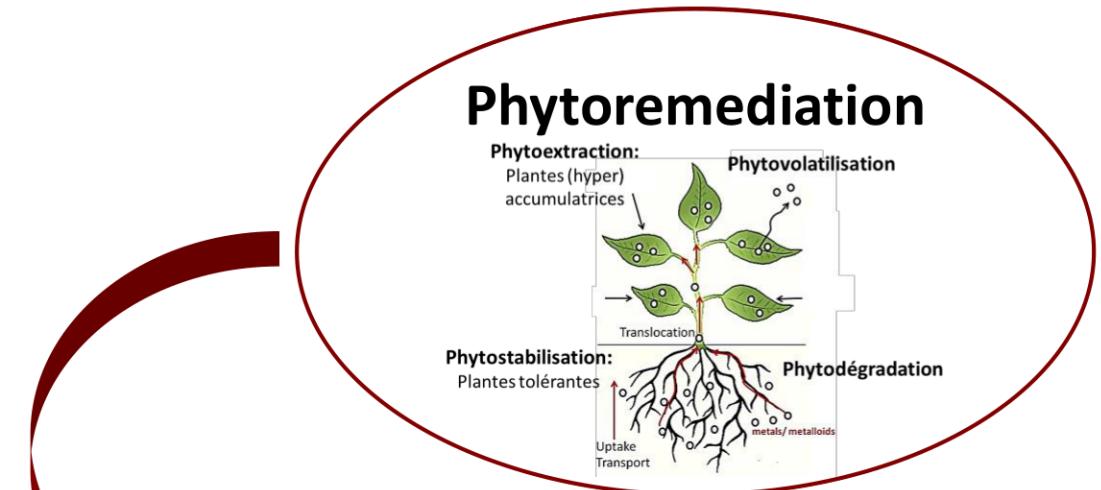

Pb induces oxydative stress → Lipid peroxydation → Increase in MDA

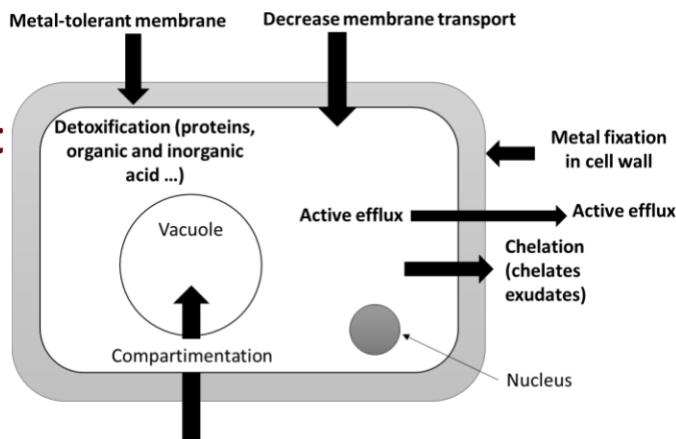

Polyphenol content

Implication of polyphenols in Pb detoxification and Pb-induced oxydative stress attenuation

Fundamental aspect

Enrich knowledge about the fundamental aspects of Pb tolerance and accumulation

Applied aspect

Use of the identified molecules :

- Boosting plants response to Pb
- Selection of candidate plants for phytoremediation programs
- Extraction of high value-added metal

Thank you for your attention

Metabolomic and Biochemical analysis of Pb accumulation and tolerance in *Hirschfeldia incana*
